Such adjustment shall be estimated from time to time during the calendar year and the effect of any revision shall be applied retroactively where applicable.

Metropolitan shall pay to Holtwood in addition to payments otherwise provided for in this Article and in Article VI all taxes which now or hereafter may be levied and which apply specifically to Holtwood's supply and services to Metropolitan or to the revenues received therefor.

SECTION 7. On or before the tenth day of every calendar month Holtwood shall render to Metropolitan a bill for the total charges under this Article and under Article

VI for the preceding month and Metropolitan shall pay said bill on or before the [22858] (page 8) twenty-fifth day of said month.

ARTICLE VI

Special Facilities

Metropolitan shall pay Holtwood at the rate of 1% per month on the cost of terminal and interconnection facilities at the Violet Hill Substation owned by Holtwood.

ARTICLE VII

Characteristics of Supply and Points of Delivery

Section 1. The electric power and energy supplied to Metropolitan hereunder shall be in the form of three phase alternating current at a frequency of approximately sixty (60) cycles per second at the points of delivery specified in Section 3 of this Article. Voltage and frequency are to be held within the limits of good commercial practice.

Section 2. Each party hereto shall adjust, maintain and operate its system in such manner as will, to the greatest extent practicable, protect the equipment and service of the other from damage and interruption.

Section 3. The points of delivery shall be as follows:

(a) The bus side of the present oil circuit breakers on Holtwood's 66,000 volt circuits (now known as Circuits Nos. 11 and 12) at Violet Hill Substation; and

(b) Such other points of delivery between the parties hereto as may be mutually agreed upon either as additional points of delivery or in substitution for the foregoing specified point of delivery.

ARTICLE VIII

Metering

Section 1. Suitable metering equipment for measuring the energy, and reactive kva. supplied to Metropolitan

hereunder shall be [22859] (page 9) installed and maintained at the delivery points specified in Sections 3 (a) and (b) of Article VII, by and at the expense of Holtwood. Metropolitan may install, at its own expense, duplicate meters, to be known as "Checking Meters" at the specified points of delivery.

SECTION 2. Metropolitan shall provide suitable metering equipment, other than that provided for under Section 1 of this Article, for measuring the demand and energy necessary to the determination of Metropolitan's total requirements as specified in Article III.

SECTION 3. Routine calibration tests of billing and check meters shall be made at least once in every twelve months or at such shorter intervals as may be mutually agreed upon. At the request of either party hereto, these routine tests shall be made in the presence of representatives of both parties. In addition to these routine tests, in case either party at any time believes that any billing metering equipment registers incorrectly, it shall have the right to make or have made a special test on such equipment using methods mutually agreeable; such tests shall be made in the presence of representatives of both parties. After every test the meter shall be adjusted to read with as near absolute accuracy as possible within the then prevailing range of use, allowing for inaccuracy in the instrument transformers as determined by tests. Calibration of the ratio of instrument transformers, which involves considerable expense, shall be made only if found necessary.

Any metering equipment shall be considered accurate for billing purposes if, as the result of tests, the weighted average error above or below accuracy is found to be not greater thant two (2) per cent. The calibration points (selected according to the prevailing range of use) and the

method of weighing the results are to be agreed upon before the tests, by the parties concerned.

If the weighted average error of any billing metering equipment is bound to be greater than two (2) per cent but the error of the check meter, if one is available, is two (2) per cent or less, the consumption since the last monthly reading preceding the request of test shall be billed according to the registration of the check meter. If the billing and check meters are both found to be more than two (2) per cent inaccurate, the probable consumption since the last monthly reading preceding the request for test shall be estimated and paid for as may be agreed upon between the parties. In no case shall any correction [22860] (page 10) whatever on account of inaccuracy of metering equipment extend back beyond thirty (30) days prior to the day of request for test or beyond the last preceding test in case this was within the thirty (30) day period.

ARTICLE IX

Interchange

Section 1. Metropolitan and Holtwood shall in addition to the firm power supply provided for in Article IV hereof, interchange electric energy and capacity for the purpose of obtaining economies in the production of energy and in the protection of service. Holtwood represents that for the purposes of this Article it is in a position to include the energy and/or capacity of Safe Harbor and for such purposes the same shall be treated as though it were owned and controlled by Holtwood. The interchange energy and capacity provided for hereunder shall be billed and paid for as follows:

(a) "Steam Economy Energy"

The billing for this interchange, between the parties hereto, shall be such that the savings resulting therefrom shall be equally divided betwen them.

(b) "Hydro Economy Energy"

The billing for this interchange, between the parties hereto, on Sundays and major holidays in Metropolitan's territory and between the hours of 9 P. M. and 7 A. M. on weekdays shall be at 70% of the cost of the displaced steam generated energy.

(c) "Steam Economy Capacity"

The billing for this interchange, between the parties hereto, shall be such that the savings resulting therefrom shall be equally divided between them.

(d) "Hydro Economy Capacity"

The billing for this interchange, between the parties hereto, shall be at rates agreed upon [22861] (page 11) from time to time.

(e) "Emergency Supply"

The billing for this interchange, between the parties hereto, for energy and/or capacity shall be on the basis of economy transactions based on the receiving company's next available capacity (if receiving company has no next available capacity and the supply is from hydro the receiving company's top 20,000 kw. of capacity shall be considered as its next available capacity), or the supplying company's cost plus 10%, whichever is the greater.

(f) The billing for interchange, involving others in addition to the parties hereto, shall be at rates agreed upon from time to time.

(g) "Energy without Replacement Value"

The billing for energy generated by Metropolitan or purchased by it from others and supplied to Holtwood for which Holtwood may have no re-

placement value, shall be at the rates provided for in Subsections (e) and (f) hereof.

SECTION 2. On or before the tenth day of every calendar month Holtwood and Metropolitan each shall send to the other a bill for the total charges under this Article for the preceding month and each shall pay said bill to the other on or before the twenty-fifth of said month.

ARTICLE X

INTERRUPTIONS TO SERVICE

In case Holtwood is prevented from delivering or Metropolitan is prevented from taking the electric power and energy provided for in Article IV, by strike, riot, fire, invasion, explosion, flood, storm, lightning, judicial or administrative order, act of God or public enemies, no party shall be under any liability to the other by reason of such failure; provided, however, that nothing herein contained shall be construed as permitting Holtwood to refuse to deliver electric power and [22862] (page 12) energy or Metropolitan to refuse to receive the same, as provided for in this agreement, as soon as the cause of such interruption is removed, and each party hereto shall be prompt and diligent in restoring equipment to service for the delivery and receipt of power and energy.

In case Metropolitan is prevented from taking said electric energy, in whole or in part, by reason of any of the causes enumerated in this Article, a proportionate adjustment in the energy charges provided for hereunder shall be made by Holtwood.

ARTICLE XI

OPERATING COMMITTEE

Each of the parties hereto shall appoint a representative who may be changed from time to time, at the pleasure

of the appointing party. The representatives so appointed shall meet from time to time and as often as may be desirable for the purpose of carrying out the terms of this agreement in a mutually satisfactory manner.

ARTICLE XII

Waiver of Rights

The failure of either party hereto to enforce from time to time a strict performance of any of the covenants and agreements herein contained, or the waiving from time to time of a default on the part of either party hereto, shall not be construed as a waiver of any continuing or subsequent default or defaults, nor impair the rights of any of the parties hereto subsequently to require the strict performance of each and every convenant, agreement and understanding herein contained.

ARTICLE XIII

Jurisdiction of Regulatory Bodies

The charges provided for in this agreement shall be subject to increase or decrease from time to time by order of regulatory authorities having jurisdiction to regulate such charges under the constitution and laws of the Commonwealth [22863] (page 13) of Pennsylvania and of the United States.

ARTICLE XIV

Assignment

The terms and provisions of this Agreement shall enure to and be binding upon the respective successors and assigns of the parties hereto.

In Witness Whereof, the parties hereto have caused these presents to be duly executed by their respective

officers, thereunto duly authorized, and their respective corporate seals to be hereunto affixed, as of the day and year first above written.

EXHIBIT NO. 73.

[22867]

COATESVILLE POWER SUPPLY CONTRACT

AGREEMENT made this first day of August, 1933, by and between PHILADELPHIA ELECTRIC COMPANY (hereinafter called "PX"), party of the first part, and PENNSYLVANIA WATER & POWER COMPANY (hereinafter called "Holtwood Company") and SAFE HARBOR WATER POWER CORPORATION (hereinafter called "Safe Harbor Company"), parties of the second part (hereinafter called "Hydro"), all of said companies being corporations of the Commonwealth of Pennsylvania.

PX, as successor to Chester Valley Electric Company, has been purchasing from Holtwood Company a large part of the electrical requirements of the territory formerly served by Chester Valley Electric Company under an agreement dated April 2, 1923, and extending until midnight of March 31, 1934, between Chester Valley Electric Company and Holtwood Company. PX desires to continue to purchase such supply under the terms contained herein.

Holtwood Company desires to continue to sell electric supply to PX under the terms contained herein.

Safe Harbor Company, affiliated with Holtwood Company, desires to become a party to this agreement, and to undertake with Holtwood Company to furnish the electric supply desired by PX, which is satisfactory to Holtwood Company and PX.

[22868] (page 2)

NOW, THEREFORE, in consideration of the premises and of the mutual covenants, promises and agreements hereinafter set forth, the parties hereto do hereby agree with each other as follows:

ARTICLE I

Effective Date and Duration of Agreement

This agreement shall become effective at midnight of March 31, 1934, and shall continue in force until midnight of March 31, 1939, and thereafter for successive periods of three (3) years duration each unless and until either party shall have given to the other party, at least eighteen (18) months prior to the expiration of the original term or of any extension thereof, written notice of its desire to terminate the agreement at the end of that period.

ARTICLE II

Amount of Power and Energy

Section 1. Hydro shall be obligated to supply and PX shall be obligated to receive and pay for the entire electrical power and energy requirements of PX for use and/or sale within the territory now supplied by the distribution system of the former Chester Valley Electric Company, or by any extension of the said distribution system which PX may make, except that

(a) PX at its option may furnish from sources other than Hydro the requirements of those portions of said territory which lie east of an imaginary line running from Whitford in a northerly direction to Nantmeal Village, [22869] (page 3) and south of an imaginary line running in a westerly direction from Embreeville south of Buck Run to Lenover, provided such portion of said territory can be connected, in the judgment of PX, to such other sources more economically than to the Newlinville Substation;

(b) PX may generate, by means of non-condensing generating units at its Coatesville steam plant, an amount of power and energy not greater than that incidentally generated in connection with the supply

of steam required for the steam heating load of PX in Coatesville;

(c) PX may supply from its own system any electrical power and energy necessary in said territory for the electrification of railroads;

(d) PX may obtain electrical energy from its industrial customers in said territory under interchange arrangements if the generation of such energy by such customers is incidental to the supply of steam required by said industrial customers in their processes and if such supply does not affect adversely the quality of service under this contract or introduce unsatisfactory parallel operating conditions, provided, however, that PX shall not receive from any such industrial customer in any one month substantially more energy than PX supplies to that industrial customer in the same month;

(e) Nothing herein contained shall obligate Hydro to increase the capacity of Holtwood Company's existing transmission line from Holtwood to Coatesville, or to provide an additional line or lines, at any time. Furthermore Hydro shall not be obligated to provide step-up transformer capacity for service to PX in addition to [22870] (page 4) that now owned and operated by Holtwood Company at Holtwood, on account of increases in load occurring after either party hereto has notified the other party of its desire to terminate this agreement under the provisions of Article I.

SECTION 2. In the event of emergency in PX's system outside of the charter territory of the former Chester Valley Electric Company, PX may request Hydro, and Hydro shall be obligated, to supply through the Newlinville Substation the emergency requirements of PX, in addition to the electrical requirements of the territory stated in Sec-

tion 1 of this Article, to the extent that Hydro may judge it has generating and transmission capacity available for such emergency supply without detriment to service to its other customers.

SECTION 3. In case of emergency in the system of Hydro, Hydro may request PX and PX shall be obligated to generate at its Coatesville steam plant, and/or to supply over its 33 Kv. circuit from Cromby and any other interconnection PX may make between Coatesville and other parts of its system, the emergency requirements of Hydro, for supply to the territory described in Section 1 of this Article and/or for backfeed to Holtwood, through the Newlinville Substation, to the extent that PX may judge it has generating and transmission capacity available for such emergency supply without detriment to service to its other customers.

ARTICLE III

RATES AND PAYMENTS

SECTION 1. PX shall pay Hydro for the electrical supply described in Article II, Section 1, hereof a Demand Charge, [22871] (page 5) an Energy Charge and a Transmission Charge according to the following schedules:

Demand Charge:

$1.35 per month per Kw. for the first 2,500 Kw. of the Billing Demand.

$1.05 per month per Kw. of Billing Demand above 2,500 Kw.

Energy Charge:

4.0 mills per Kwh. for the first 150 Kwh. per month per Kw. of the monthly maximum demand.

3.5 mills per Kwh. for the next 250 Kwh. per month per Kw. of the monthly maximum demand.

3.0 mills per Kwh. for all excess Kwh.

Transmission Charge:

$5,000.00 per month.

SECTION 2. The maximum demand in any month, to be used in determining Billing Demands and in the blocking of energy, shall be the highest demand in kilowatts of supply under Article II, Section 1, in that month, averaged over any period of thirty (30) consecutive minutes, subject to increase for low power factor as provided in Article V.

The Billing Demand for any month shall be the greater of the following quantities (a) and (b):

(a) The maximum demand in that month.

(b) The average of the maximum demand in that month and the highest maximum demand in any of the preceding eleven (11) months.

[22872] (page 6)

In no event shall the Billing Demand be less than 2,500 Kw.

SECTION 3. For emergency supply by Hydro at PX's request as described in Article II, Section 2, PX shall pay Hydro the latter's actual additional expense for such emergency supply plus twenty-five (25) per cent, but the unit rate for such emergency supply shall not be less than 3.0 mills per Kwh. as metered at Newlinville.

For emergency supply by PX at Hydro's request as described in Article II, Section 3, which is supplied to the territory described in Section 1 of Article II, Hydro shall pay to PX the latter's actual additional expense for such emergency supply plus twenty-five (25) per cent, but the unit rate for such emergency supply shall not be less than 3.0 mills per Kwh. PX will consider such emergency supply to Hydro as being resold to PX by Hydro, and Hydro shall include such supply in the demand and energy which it will bill to PX at the rates set forth in Section 1 of this Article.

For emergency supply by PX at Hydro's request as described in Article II, Section 3, which is fed back to Holtwood, Hydro shall pay PX the latter's actual additional

expense for such emergency supply, plus twenty-five (25) per cent, but the unit rate for such emergency supply shall not be less than 3.0 mills per Kwh.

SECTION 4. In the event of a material increase or decrease in the cost of fuel as compared with the date of this agreement, at the request of either party an equitable adjustment shall be made in the bill for energy supplied by Hydro as computed according to the provisions of Section 1 of this Article. This adjustment shall be based on the amount of [22873] (page 7) energy supplied PX which is obtained from steam-electric generation.

SECTION 5. PX shall reimburse Hydro for any additional taxes, such as taxes based upon the volume of generation, transmission and/or sale of electricity, which may in the future be imposed upon and paid by Hydro over and above taxes in effect upon the date of the signing of this agreement but not in excess of the amount in dollars of such additional taxes that would have been incurred by PX instead of Hydro if PX had supplied from its own generating stations the energy purchased from Hydro.

SECTION 6. On or before the fifth day of every calendar month Hydro shall render to PX a bill for, and on or before the twentieth day of said month PX shall pay the sum of, all charges as billed by Hydro for the preceding month. In case of dispute as to the correctness of the bill PX shall make payment of that amount of the charge as billed which is not in dispute. When decision or agreement with respect to the disputed amount is reached, interest at the rate of six (6) per cent per annum on the amount of the delayed payment shall be paid by PX from the date on which such amount was originally due.

ARTICLE IV

CHARACTERISTICS OF SUPPLY AND POINTS OF DELIVERY

SECTION 1. Power and energy supplied PX shall be in the form of three phase alternating current at a fre-

quency of approximately 60 cycles per second and at a voltage of approximately 67,000 volts or such other voltage as may be agreed upon as normal voltage, at the point of delivery. The [22874] (page 8) deviation of the voltage shall not exceed 5% above or 5% below normal. PX shall maintain a practically balanced load between phases.

SECTION 2. Electrical supply under this agreement shall be delivered by Hydro at the high tension terminals of PX's step-down transformers at its Newlinville Substation, and shall be metered on the low tension side of PX's said step-down transformers.

ARTICLE V

POWER FACTOR

PX shall maintain a power factor at the points of metering specified in Article IV, Section 2, of not less than 90% lagging unless a lower power factor is requested by Hydro or is necessary because of Hydro's failure to deliver the voltage specified in Article IV, Section 1. If in any month the average power factor at the points of metering during the hours from 6 A. M. to 10 P. M. on all days except Sundays and national holidays is less than 90% lagging, and if such lower power factor was not caused by request of Hydro or by failure of Hydro to deliver the voltage specified in Article IV, Section 1, the maximum demand for that month to be used in determining the Billing Demand under the provisions of Article III, Section 2, either in that month or in any subsequent month, shall be the measured maximum demand in kilowatts multiplied by 90% and divided by the said average power factor in per cent. The average power factor shall be computed from the readings (totalized for the above mentioned hours of the month) of integrating reactive kilovolt-ampere-hour meters equipped with ratchets to prevent the meters from running backward on leading power factor, and of energy [22875] (page 9) meters, at the metering points specified in Article IV, Section 2.

ARTICLE VI

Metering

Section 1. Billing metering equipment of approved type for measuring the demand, energy and reactive supplied to PX hereunder shall be installed and maintained at the metering points specified in Article IV, Section 2, by and at the expense of Hydro. PX may install at its own expense duplicate meters, to be known as "Checking Meters."

Section 2. All meters shall be kept under seal, and all checking, calibration and adjustment of such meters shall be made in the presence of authorized representatives of each of the parties. All meters shall be tested and calibrated by comparison with accurate standards at regular intervals as may be mutually agreed upon. In case either PX or Hydro shall at any time believe that any meter registers incorrectly, the party holding such belief shall have the right to require that an extra test outside the regular schedule be made of such meter. The party desiring such test shall make written request to the other party, and thereupon such meter shall be tested and calibrated. If as a result of any test, a meter shall be found incorrect or inaccurate, it shall be restored to an accurate condition or a new meter shall be substituted.

If as a result of any test, any billing meter shall be found to register in excess of two per cent (2%) either above or below normal, than the readings of the checking meter if available and if found correct within two per cent (2%) shall be substituted. If no checking meter is available then the readings of the normal billing meter previously taken [22876] (page 10) shall be corrected according to the percentage of inaccuracy so found, but no such correction, either in respect to demand or kilowatt hours drawn and consumed, shall extend back beyond thirty (30) days previous to the day on which such inaccuracy shall be dis-

covered by such test, and if during such previous thirty (30) days one or more prior tests shall have been made under provisions hereof, then no such correction shall extend back beyond the date of the last of such prior tests.

ARTICLE VII

Holtwood Company Agent for Safe Harbor Company

Safe Harbor Company hereby authorizes and empowers Holtwood Company to act as its agent, for and on its behalf, in all transactions and relations with PX under this agreement, and PX shall be entitled to deal with Holtwood Company in all respects as if Holtwood Company were the only party contracting with it hereunder.

ARTICLE VIII

Suspension of Service Due to Unavoidable Causes

In case Hydro shall be prevented from delivering electrical supply under this agreement or in case PX shall be prevented from receiving said electrical supply by reason of strike, riot, fire, invasion, explosion, flood, storm, lightning, judicial or administrative order, Act of God or public enemies, or any other cause or causes resonably beyond their control, PX shall not be obligated to pay the Demand Charge during the period of such interruption and Hydro shall not be obligated to deliver electrical supply during such period, [22877] (page 11) provided, however, that nothing herein contained shall be construed as permitting Hydro to refuse to deliver electrical supply or PX to refuse to receive same as soon as the cause of interruption is removed, and each of the parties hereto shall be prompt and diligent in removing or overcoming such causes. No consequential damages for loss of profits of PX or based upon the cost of substituted energy shall be allowable against Hydro for any failure under this Article VIII to deliver electrical supply to PX.

ARTICLE IX

Liability

Each party shall save the other party harmless of and from any damages which may occur to the whole or any part of its own equipment, and from any liability for or on account of injuries to persons or damage to property caused by or sustained on its own equipment, notwithstanding that a judgment may be rendered against the other party hereto, except that each party shall be responsible for all claims from its own employees, agents or servants under any Workmen's Compensation Law, and neither party shall be called upon to indemnify or save harmless the other party against claims, demands, cost or expense for injuries to persons or damage to property occurring on the equipment or property of the other.

ARTICLE X

Waiver of Rights

The failure of either of the parties hereto to enforce from time to time the strict performance of any of the convenants and agreements herein contained, or the waiving from time to time of a default on the part of either party hereto, shall [22878] (page 12) not be construed as a waiver of any continuing or subsequent default or defaults, nor impair the right of either of the parties hereto subsequently to require the strict performance of each and every covenant, agreement and understanding herein contained.

ARTICLE XI

Arbitration

In case of any dispute arising between the parties to this agreement, the said dispute shall be referred to a Board of Arbitration upon service of written notice by either party to the other party hereto.

The said Board of Arbitration shall consist of three members, the first member to be chosen by the party complaining, the second member to be chosen by the other party, and the third member to be chosen by the first and second members. Should the second or third member remain unselected at the expiration of thirty (30) days after notice of arbitration is given, then upon the request of the complaining party, and upon notice thereof having been given to the other party hereto, the second or third member, or both, of the Arbitration Board shall be selected by the senior Judge in the U. S. District Court for the Eastern District of Pennsylvania or, in the event of the said Judge's disinclination or failure to act within thirty (30) days, by the President Judge of the Court of Common Pleas of Chester County.

The Board of Arbitrators shall proceed at its earliest convenience to hear and determine the questions at issue after having given each party hereto not less than five days notice of the time and place of the first meeting.

[22879] (page 13)

Each party shall be permitted to be represented by counsel before the Board of Arbitrators, and to present in full, by competent witnesses, all facts, figures and statements which might aid the Board of Arbitrators to give a final and fair judgment as to the questions in dispute.

The determination of the Board of Arbitrators, or a majority thereof, shall be made within sixty (60) days after the submission to said Board, unless prevented by circumstances unforeseen, and the decision of the Board of Arbitrators, or a majority thereof, shall be final and conclusive upon the parties hereto and said parties shall abide by such decision.

All expenses in connection with such arbitration, including a reasonable compensation for the arbitrators, shall be divided equally between the two parties, with the exception of expenses of counsel, witnesses and employees of the par-

ties hereto, which expenses shall be borne by the parties incurring them, provided, however, that the award may specify a different division of costs and expenses.

All notices herein provided for may be given by serving the same in writing, or by sending the same by registered mail addressed to the parties interested at their respective principal places of business.

ARTICLE XII

Assignment

The terms and provisions of this agreement shall enure to and be binding upon the respective successors and assigns of the parties hereto.

[22880] (page 14)

In Testimony Whereof the parties hereto have caused these presents to be signed in their corporate names by their authorized officers and their corporate seals to be hereunto affixed, and duly attested as of the day and year first above written.

Subject: *Supplement to Coatesville Power Supply Contract Re Night Service Rider.*

Philadelphia Electric Company,
1000 Chestnut Street,
Philadelphia, Pennsylvania.

Gentlemen:

1. The following agreement supplements our agreement (hereinafter called the "Power Contract") of even date herewith for electric supply to the territory of the former Chester Valley Electric Company.

2. You have expressed your intention of offering a "Night-Service Rider" tariff to industrial customers served from your Coatesville distribution system, whereby those customers who may elect to take service under the night-service rider will be billed by your Company at reduced rates per kilowatt for their excess off-peak billing demand and possibly also at reduced rates for energy taken during off-peak hours. Excess off-peak billing demand is understood to be the amount by which the greatest demand during off-peak hours exceeds the billing demand during on-

peak hours. On-peak hours are the hours between 7 A. M. and 7 P. M. Eastern Standard Time, omitting Sundays. During the period when Daylight Saving Time, as now known, is commonly adopted, on-peak hours will be those hours between 6 A. M. and 6 P. M. Eastern Standard Time. Off-peak hours are all other hours. Service during on-peak hours to be subject to your regular tariffs. You have asked that a provision of this character be added [22882] (page 16) to our Coatesville power agreement in order that the rate reduction effected by your night-service rider tariff be shared with the companies from whom you purchase your Coatesville supply. Therefore, it is agreed as follows:

AS TO DEMAND CHARGE:

3. In determining PX's maximum demand for any month in which PX sells under its night-service rider power and/or energy to one or more industrial customers in the territory supplied with energy purchased from Hydro, (which maximum demand is used for determining the Billing Demand in that month or in any subsequent month), only demands established by PX during on-peak hours (as defined in Paragraph 2 hereof) shall be considered.

4. In any month in which PX's off-peak demand upon Hydro is greater than the Billing Demand determined as set forth in Paragraph 3 hereof and Article III, Section 2 of the Power Contract, the amount of the difference shall be paid for by PX at the rate of Forty Cents ($0.40) per Kw. per month.

AS TO ENERGY CHARGE:

5. If and when in any month PX shall sell, under its night-service rider, to one or more industrial customers in the territory supplied with energy purchased from Hydro, electrical energy during off-peak hours at the rate of 4 mills per Kwh. or less, Hydro shall sell to PX in that month

at the rate of 3 mills per Kwh. the same amount of off-peak energy that PX sells under the above mentioned arrangement. The rates for the remainder of the Kwh. supplied under Article II, Section 1 of the Power Contract, shall be as specified in Article III, Section 1 of said Power Contract, the blocking of the energy charge being based on the maximum [22883] (page 17) demand in that month during the on-peak hours only (as defined in Paragraph 2 hereof).

Your countersignature below will indicate your acceptance of this proposal.

PENNSYLVANIA WATER & POWER COMPANY,

(Signed) J. A. WALLS,
Vice President

Accepted on August 1, 1933.

At Philadelphia, Pa.

PHILADELPHIA ELECTRIC COMPANY,

By—

N. E. FUNK

EXHIBIT NO. 74.

[22886]

THIS SUPPLEMENTAL AGREEMENT, made the 13th day of December, 1938 by and between PHILADELPHIA ELECTRIC COMPANY (hereinafter called PX), party of the first part, and PENNSYLVANIA WATER & POWER COMPANY and SAFE HARBOR WATER POWER CORPORATION (hereinafter together called HYDRO), parties of the second part, all of said parties being corporations duly organized under the laws of the Commonwealth of Pennsylvania.

WITNESSETH THAT

WHEREAS, HYDRO AND PX, under date of August 1, 1933, entered into an agreement and supplement thereto providing for the purchase from HYDRO by PX, with exceptions therein set forth, of its electrical power and energy requirements within the territory formerly served by Chester Valley Electric Company, said agreement and supplement being herein collectively referred to as the 1933 Agreement; and

WHEREAS, the parties hereto desire further to supplement and amend the 1933 Agreement as hereinafter set forth:

NOW, THEREFORE, in consideration of the premises and of the mutual agreements herein set forth, the parties hereto do hereby mutually agree as follows:

[22887] (page 2)

SECTION 1. Article I of the 1933 Agreement is hereby amended by striking out the date March 31, 1939, and inserting in place thereof the date March 31, 1942.

SECTION 2. Section I of Article II of the 1933 Agreement is hereby amended by striking out paragraph (a) and

substituting in lieu thereof a new paragraph (a), reading as follows:

"(a) PX at its option may furnish from sources other than HYDRO the requirements of those portions of said territory which lie east of an imaginary line located by projecting the West Whiteland-East Caln township line in the northeasterly direction, and south of an imaginary line running in a westerly direction from Embreeville south of Buck Run to Lenover, provided such portion of said territory can be connected, in the judgment of PX, to such other sources more economically than to the Newlinville Substation."

SECTION 3. Section I of Article II of the 1933 Agreement is hereby amended by striking out paragraph (c) and substituting in lieu thereof a new paragraph (c), reading as follows:

"(c) PX may supply from its own system any electrical power and energy necessary in said territory for the electrification of railroads, except as the parties hereto have or may hereafter otherwise agree from time to time;"

SECTION 4. Article II of the 1933 Agreement is hereby amended by adding at the end thereof a new Section 4, reading as follows:

"Section 4. In the event of emergency in PX's system inside the territory described in Section 1 of this Article of a nature which prevents HYDRO from supplying all of its contractual requirements through the Newlinville [22888] (page 3) Substation, PX may supply such emergency requirements over its 33 kv. circuit from Cromby and West Chester and/or its Newlinville-Cochranville circuit and such sections so supplied may be electrically separated from HYDRO's supply through Newlinville during the period of such emergency."

SECTION 5. Section 3 of Article III of the 1933 Agreement is hereby amended by adding at the end thereof an additional paragraph, reading as follows:

"For emergency supply by PX as described in Article II, Section 4, which is supplied to the territory described in Section 1 of Article II, the energy so supplied shall not be included in the computation of monthly energy charge under Section 1 of this Article, provided the amount and period of such emergency supply does not exceed the extent and duration of the actual emergency and that PX makes every effort with due regard to its service obligations to promptly reestablish the normal flow of energy supply from HYDRO through the Newlinville Substation."

SECTION 6. Section 1 of Article VI of the 1933 Agreement is hereby amended by adding at the end thereof an additional paragraph, reading as follows:

"PX shall provide and maintain at its own expense similar metering equipment at mutually agreed upon locations in each of its own interconnections with the territory described in Section 1 of Article II for the purpose of determining the amount of interchange at such points under the several emergency conditions described in Section 3 of Article III."

[22889] (page 4)

SECTION 7. Except as hereinabove expressly supplemented and amended, all terms and conditions of the 1933 Agreement shall remain in full force and effect. This Agreement shall be effective when all legal prerequisites before any regulatory authority with respect thereto shall have been consummated. The parties hereto shall cooperate in conforming to such prerequisites.

IN WITNESS WHEREOF, the parties hereto have caused this Supplemental Agreement to be executed by their re-

spective officers thereunto duly authorized and their respective corporate seals to be hereunto affixed and attested, as of the day and year first above mentioned.

Re: Coatesville Power Supply Contract

Dear Sir:

Your letter of February 8, regarding the fuel rate adjustment received.

I agree that the method outlined by you is "an equitable adjustment" in accordance with the terms of Section 4 of Article III of the Coatesville Power Supply Contract.

Very truly yours,

(Signed) K. M. IRWIN
Assistant to Vice-President

February 8, 1944

Mr. K. M. Irwin, Assistant to Vice-President
The Philadelphia Electric Company
1000 Chestnut Street, Philadelphia, Pa.

RE: *Coatesville Power Supply Contract*

Dear Mr. Irwin:

This will confirm our considerations of a fuel rate adjustment under our Coatesville power supply contract because of the recent marked increase in the price of fuel.

We propose to make such an adjustment to the energy billed monthly under this contract beginning with the bill for energy delivered during the month of January 1944. This fuel rate adjustment is considered to be in accordance with the terms of Section 4 of Article III of our Coatesville power supply contract dated August 1, 1933, which provides that either party may request that an equitable adjustment be made in the bill in the event of a material increase or decrease in the cost of fuel as compared with the price of fuel as of the date of that agreement.

The monthly fuel rate adjustment will apply to the total energy delivered at Newlinville Substation under this contract; will be based on the proportion of steam electric generation to the total generation of a combined system (which for this purpose includes the power systems of this Company, Safe Harbor Water Power Corporation and Consolidated Gas Electric Light and Power Company of Baltimore) after adjustment for power interchange transactions by this Company; will vary with the average pounds of coal used per Kwh. (station send-out) in all of the steam elec-

tric generating plants of the Consolidated Gas Electric Light and Power Company of Baltimore; and will vary with the increase or decrease in the average cost of coal as reported monthly by Consolidated Gas Electric Light and Power Company of Baltimore to the Public Service Commission of Maryland, from a base price of $4.25 per net ton. The details of such monthly fuel rate adjustment computations are shown on an attached sheet and will apply so long as the average price of coal per net ton during any month as reported by Consolidated Gas Electric Light and Power Company of Baltimore to the Public Service Commission of Maryland exceeds $4.50, or is less than $4.00 per net ton.

Will you please advise us whether the above is in accordance with your understanding.

Yours very truly,

(Signed) G. W. SPAULDING
G. W. Spaulding
Vice-President

[22892]

February 8, 1944

FUEL RATE ADJUSTMENT UNDER
COATESVILLE POWER SUPPLY CONTRACT

A—Ratio $\frac{\text{Net Steam Gen.}^*}{\text{Net Total Gen.}^{**}}$ %

B—Total energy delivered at Newlinville Kwh.

C—Average Pounds Coal per Kwh. (Baltimore Steam Plants) #/Kwh.

D—Cost of Coal per Net Ton (in bunkers of Baltimore steam plants) $

E—Variation in Dollars per Net Ton from $4.25 base price $

$$\text{Fuel Rate Adjustment} = A \times B \times C \times \frac{E}{2{,}000} = \$$$

*—Total Baltimore and Holtwood net steam generation
Less steam interchange sales to Penna. ties
Plus steam interchange purchased from Penna. ties

**—Total steam and hydro net generation
Less all interchange sales to Penna. ties
Plus all interchange purchased from Penna. ties

EXHIBIT NO. 76.

[22896]

THIS RENEWAL AGREEMENT, made as of the first day of May, 1933, by and between PENNSYLVANIA WATER & POWER COMPANY (hereinafter sometimes called "Holtwood Company"), and SAFE HARBOR WATER POWER CORPORATION (hereinafter sometimes called "Safe Harbor Company"), parties of the first part (hereinafter called "Generating Companies"), and PENNSYLVANIA POWER & LIGHT COMPANY (hereinafter called "Receiving Company"), party of the second part, all of said companies being corporations of the State of Pennsylvania:

WITNESSETH:

WHEREAS, by agreement dated October 9, 1912, Holtwood Company agreed to supply and Edison Electric Company (to which company Receiving Company is successor) agreed to purchase certain electric power and electric energy required by said Edison Electric Company, in accordance with the terms and conditions set forth in said agreement, and

WHEREAS, by renewal agreement dated October 19, 1923, the term of said agreement of October 9, 1912 was extended for a period of ten (10) years from May 1, 1923, and certain provisions thereof modified, and

WHEREAS, the parties thereto desire to modify certain provisions of said agreement of October 9, 1912, cancel other provisions thereof and extend the term thereof, and cancel the said renewal agreement of October 19, 1923, and

[22897] (page 2)

WHEREAS, Safe Harbor Company desires to become a party to this agreement and to undertake, jointly and severally, with the Holtwood Company, to the extent per-

mitted by law, the obligations formerly the sole obligation of Holtwood Company under said agreement of October 9, 1912, as herein modified and extended, all of which is satisfactory to both Holtwood Company and Receiving Company:

NOW, THEREFORE, in consideration of the premises and of the mutual covenants, promises and agreements hereinafter set forth, the parties hereto do hereby agree with each other as follows:

ARTICLE I

TERM OF CONTRACT

All the provisions of said agreement of October 9, 1912, as herein modified or extended, shall continue in force until midnight of October 31, 1940, and thereafter for successive periods of two (2) years' duration unless and until either shall have given to the other party written notice at least eighteen (18) months prior to the expiration of the original term or of any extension thereof of its desire to terminate the same at the end of the current contract period.

ARTICLE II

CANCELLATION OF PROVISIONS IN PREVIOUS AGREEMENTS

SECTION 1. All the provisions in the said renewal agreement of October 19, 1923, are hereby cancelled without prejudice to the proceedings referred to in Section 3 of Article IX hereof, provided however that, except as hereinafter specifically provided, such cancellation shall not release either party from any payment accruing thereunder.

[22898] (page 3)

SECTION 2. The following provisions of said agreement of October 9, 1912 are hereby cancelled:

Article II, AMOUNT OF ENERGY TO BE SUPPLIED.

The First Paragraph, PRICE AND PAYMENTS, of Article III.

The words "at as near as possible to unity power factor, and," in the second sentence of the second section, RECEIVING COMPANY'S EQUIPMENT AND USE OF POWER, of Article IV,

And all other provisions therein and all other agreements and arrangements inconsistent with this renewal agreement.

ARTICLE III

CHARACTERISTICS OF POWER AND ENERGY AND POINTS OF DELIVERY

SECTION 1. Electric power and electric energy (hereinafter referred to as "power and energy") supplied under this agreement shall be 3-phase alternating current at frequencies of approximately 25 and 60 cycles per second in such quantities as Receiving Company may require hereunder. It is expected that during the first few years of this agreement there will be considerable decrease in Receiving Company's 25 cycle energy requirements. The parties hereto shall cooperate to prevent inefficient use of equipment as a result of such decrease, and to prevent tying up a large amount of 25 cycle equipment to supply a relatively small 25 cycle load.

SECTION 2. Receiving Company may at any time at its own expense adapt either or both circuits of its existing double circuit 25 cycle transmission line and corresponding substation equipment for the receipt of 60 cycle power and energy.

[22899] (page 4)

If Receiving Company's 25 cycle energy requirements shall for six (6) consecutive months average less than 1,200,000 Kwh. per month, Receiving Company shall upon request by Generating Companies, adapt, at its own expense, either or both circuits of its existing 25 cycle transmission line and corresponding substation equipment for delivery of 60 cycle energy by Generating Companies.

In either of these events, Holtwood Company shall (provided neither party has indicated its intention to terminate this agreement) make at its own expense whatever changes in its facilities are necessary to enable it to supply 60 cycle power and energy at approximately 66,000 volts to said line or lines in the required amount.

SECTION 3. The point of delivery of 25 cycle energy for transmission over Receiving Company's existing 25 cycle transmission line, or of 60 cycle energy for transmission over said line if and when it is converted to 60 cycle service, shall continue to be at the beginning of Receiving Company's said 25 cycle line near the Holtwood Power Station of the Holtwood Company. Other 60 cycle power and energy shall be delivered at the beginning of Receiving Company's 60 cycle transmission line (purchased from Holtwood Company) at Lehman's Farm Switching Structure, near Safe Harbor.

SECTION 4. All power and energy delivered hereunder shall be metered at, or in case this is not practicable, shall be corrected to, the low tension terminals of the step-down transformers at Engleside Substation. Necessary billing meters shall be installed and maintained by and at the expense of Generating Companies.

Receiving Company shall provide such additional metering equipment that may be necessary for determining the [22900] (page 5) Lancaster Load Requirements referred to in Article IV, Sections 2 and 3, subsequent to the interconnection of Receiving Company's electric system in Lancaster County, Pennsylvania, with its main system or with those of other utilities.

ARTICLE IV

AMOUNT OF POWER AND ENERGY AND FLEXIBILITY PROVISIONS

SECTION 1. Until Receiving Company shall connect its electric system in Lancaster County, Pennsylvania, with its

main system, or with those of other utilities, Generating Companies shall be obligated to supply and Receiving Company shall be obligated to receive and pay for Receiving Company's Lancaster Load Requirements. For purposes of this agreement, this amount, hereinafter referred to as "Lancaster Load Requirements," shall be considered to be all of the power and energy requirements of Receiving Company for use and sale for use in Lancaster County and adjacent areas now supplied with power and energy purchased from the Holtwood Company, except such amount as may be supplied to railroads for electrification purposes by Receiving Company from its own system, and such amounts as may be obtained from Receiving Company's existing Conestoga Creek Hydro Plants and its Engleside Steam Electric Station (or any substitute therefor) or from industrial customers in said territory under interchange arrangements, provided, however, that in any calendar year the amount of generation at said steam electric generating station of Receiving Company shall not exceed 5,000,000 Kwh., and the amount of energy received from any such customer shall not exceed the amount of energy supplied to that customer.

[22901] (page 6)

SECTION 2. After such interconnection, Generating Companies shall be obligated—

(a) to supply at all times the Lancaster Load Requirements, except that during the on-peak periods of days of low flow (hereinafter defined), Generating Companies may at their option reduce their supply to Receiving Company to 80% of the Lancaster Load Requirements during such on-peak periods, provided, however, that in emergencies affecting Receiving Company's ability to supply a portion of the load from other sources, Generating Companies shall, if possible, supply for the duration of such emergencies the entire Lancaster Load Requirements.

(b) to supply upon request of Receiving Company at times of high flow (hereinafter defined), an additional amount equal to 20% of the Lancaster Load Requirements, provided, however, that Generating Companies shall not be obligated to install generating capacity to furnish such additional supply, or to interfere with the firm power supply to their other customers. This additional amount above the Lancaster Load Requirements shall be known as Excess Energy.

SECTION 3. After such interconnection, Receiving Company shall be obligated to receive and pay for energy (hereinafter called Firm Requirements) as follows:

During all off-peak periods, the Lancaster Load Requirements.

During on-peak periods of days of high flow, 90% of the Lancaster Load Requirements.

During on-peak periods of all other days, 80% of the Lancaster Load Requirements.

[22902] (page 7)

On-peak periods, as used herein, shall be the periods between the hours of 7 A. M. to 8 P. M. weekdays, and 7 A. M. to 12 Noon and 5 P. M. to 8 P. M. Saturdays (excluding legal holidays and Sundays). Off-peak periods, as used herein, shall be all other periods of the year.

Days of high flow, as used herein, shall be those days on which the average flow of the Susquehanna River at Holtwood Plant of Holtwood Company equals or exceeds 25,000 c.f.s. Days of low flow, as used herein, shall be all other days of the year.

SECTION 4. The accumulated amount of reduction in energy supply below the Lancaster Load Requirements at Receiving Company's option under Section 3 shall at no time exceed the accumulated amount of Excess Energy supplied at the request of, and/or the amount requested by, Receiving Company under Section 2 by more than 10,000,000 Kwh.

ARTICLE V

Use of Power and Energy

Section 1. None of the power and energy supplied hereunder to Receiving Company by Generating Companies shall be sold or disposed of by Receiving Company to the Pennsylvania Railroad for electrification of its railroad lines, provided, however, that this provision shall not be construed to prevent Receiving Company from selling or continuing to sell to said Railroad Company any of such power and energy for its power and lighting requirements in its stations, shops, yards and for the operation of its signals, switches, etc.

[22903] (page 8)

ARTICLE VI

Rate for Power and Energy

Section 1. The rates to be paid by Receiving Company to Generating Companies for power and energy shall be as follows:—

6.60 mills per kilowatt hour of Lancaster Load Requirements supplied hereunder, provided, however, that the payment made by Receiving Company in any month for such supply shall not exceed that shown in or calculated from the tabulation attached hereto and made a part hereof and marked "Appendix A."

3.5 mills per kilowatt hour of Excess Energy supplied hereunder.

ARTICLE VII

Supply by Receiving Company to Generating Companies

Receiving Company agrees to supply to Generating Companies power and energy which they may request from time to time for sleet melting, correction of voltage of Generating Companies' supply and similar uses. So long

as Receiving Company shall continue to take 25 cycle power and energy, it shall at its own expense maintain its existing frequency changing equipment and when and as requested by Generating Companies to the extent that it is practicable to do so operate same up to its present capacity for conversion of 25 cycle power and energy to 60 cycle power and energy, or vice versa, provided, however, that the amount of power and energy thus supplied to Generating Companies or consumed as losses in frequency changers operated at Generating Companies' request shall be deducted by Generating Companies before calculating their bills against Receiving Company.

[22904] (page 9)

APTICLE VIII

Interconnection and Parallel Operation

It is the understanding of the parties that Receiving Company intends to interconnect its Lancaster system with its main system (which main system is itself normally operated in parallel with numerous other large electric systems) and with the electric systems of other companies. The various provisions of this renewal agreement are agreed to between the parties with the understanding that Receiving Company's Lancaster system will be so connected and will be operated in parallel with other systems and that each of the parties hereto will arrange and operate its facilities in such manner as may be necessary for such parallel operation.

As soon as Receiving Company shall have definitely determined the date upon which it expects to initiate parallel operation of its Lancaster system with its main system and/or with the electric systems of other companies, it shall advise Generating Companies of such expected date and of the nature of the interconnecting facilities which it proposes to install. In this event, Generating Companies and Receiving Company shall endeavor promptly to effect

arrangements and methods of operation which will make possible parallel operation without undue interference with the service of either party, as well as arrangements for an equitable division of the cost of any changes in or additions to the facilities or equipment of either party necessary to accomplish these results.

ARTICLE IX

Competition

Section 1. Generating Companies covenant that during the term of this agreement or any renewal thereof, prior to receipt by Generating Companies of notification from Receiving [22905]-(page 10) Company of the latter's intent not to renew this agreement, and except as hereinafter provided in Section 3 of this Article, neither they nor either of them, nor any of their affiliated, subsidiary, allied or controlled companies will, directly or indirectly, transmit, distribute, sell and/or otherwise dispose of power and energy (except to Receiving Company) for use within the charter territory of Receiving Company, or of any of its present or future affiliated, subsidiary, allied or controlled companies in Pennsylvania, said territory as now constituted being shown in green on the map attached hereto and made a part hereof, marked "Appendix B," or in the territory shown in red on said map, which is identified by the signatures of the officers executing this agreement on behalf of their respective companies, without the written consent of Receiving Company, unless ordered to do so by The Public Service Commission of Pennsylvania or other competent governmental authority.

Section 2. Generating Companies further covenant that neither they nor either of them, nor any of their affiliated, subsidiary, allied or controlled companies will, directly or indirectly, seek from any regulatory body the right to perform any of the acts described in Section 1 of this Article.

SECTION 3. The restrictions upon Generating Companies stipulated in Sections 1 and 2 of this Article shall not—

(a) apply to Martic and Manor Townships of Lancaster County;

(b) prevent Generating Companies, or either of them, or any of their affiliated, subsidiary, allied or controlled companies from selling power and energy to a non-affiliated electric public utility at a point outside of the territory shown in green on the attached map, or in a portion of said territory shown in green, in which said electric [22906] (page 11) public utility and Receiving Company both have charter rights, for use in such common territory or under border line agreements;

(c) prevent either party hereto from maintaining and prosecuting its respective contentions with respect to the specific matters and things involved in the Reports and Orders of The Public Service Commission of the Commonwealth of Pennsylvania, dated January 10, 1933, in the proceedings at Application Docket Numbers 21579 (Folder No. 2) and 24491, and it is understood that Generating Companies may avail themselves of the rights granted by such Reports and Orders as finally determined;

(d) be construed to prevent or interfere with the free flow or interchange of energy between the several sources of power of Holtwood Company and Safe Harbor Company, or any of their affiliated, subsidiary, allied or controlled companies, or to prevent the use by said companies of their own power and energy for station load and auxiliary services;

(e) be construed to prevent Generating Companies from continuing to sell power and energy (other than firm power and energy) to Metropolitan Edison Company in the vicinity of York, which power and energy

is transmitted and used by said company in its chartered territory shown in red on the attached map:

(f) prevent Generating Companies or any of their affiliated, subsidiary, allied or controlled companies, from supplying power and energy at a point or points outside of the charter territory of Receiving Company to a railroad company for use in the charter territory of Receiving Company or any of its affiliated, subsidiary, allied or [22907] (page 12) controlled companies, (excepting, however, the territory described in Section 1 of Article IV hereof) each party hereto, however, retaining the right to maintain or prosecute its respective contentions as to such supply.

SECTION 4. Receiving Company covenants that during the term of this agreement or any renewal thereof, prior to receipt by Receiving Company of notification from Generating Company of the latter's intent not to renew this agreement, neither it nor any of its affiliated, subsidiary, allied or controlled companies will, directly or indirectly, oppose the construction, maintenance or operation on the right-of-way described in Appendix C, by Generating Companies or any of their affiliated, subsidiary, allied or controlled companies, of any transmission lines with appurtenant equipment, provided such transmission lines and appurtenant equipment are not to be used for the purpose of violating the provisions of Sections 1 and 2 of this Article, of which fact Generating Companies will give Receiving Company assurance, and furthermore will not oppose the free flow, interchange and use of power and energy mentioned in paragraph (d) of Section 3 of this Article, provided, however, that nothing herein contained shall be construed as an admission by either party as to the charters and/or approvals required for the construction, maintenance and/or operation of such lines.

SECTION 5. In the event of a breach of these covenants by either party, the other party, in addition to any and all other remedies at law or in equity which it or they may

have, shall have the right, at its or their option, to terminate this agreement upon eighteen (18) months' prior written notice.

SECTION 6. This Article supersedes all former agreements, arrangements, or understandings on the subject herein covered.

[22908] (page 13)

ARTICLE X

HOLTWOOD COMPANY AS AGENT FOR SAFE HARBOR COMPANY

Safe Harbor Company hereby authorizes and empowers Holtwood Company to act as its agent, for and on its behalf, in all transactions and relations with Receiving Company under this agreement, and Receiving Company shall be entitled to deal with Holtwood Company in all respects as if Holtwood Company were the only party contracting with it hereunder.

ARTICLE XI

CANCELLATION ON ACCOUNT OF TAXES

SECTION 1. In case any additional tax or taxes (as compared with the present time), such as taxes based upon the volume of generation, transmission, and/or sale of electricity, are imposed upon and paid by Generating Companies during the term of this agreement or any extension thereof, Generating Companies may bill Receiving Company for such additional taxes to the amount that would have been incurred by Receiving Company instead of Generating Companies if Receiving Company had supplied from its own generating stations the energy purchased from Generating Companies. Receiving Company shall either pay such bills or notify Generating Companies of its unwillingness to reimburse Generating Companies. In this latter event, Generating Companies shall have the right upon notice to Receiving Company to cancel this agreement at a date eighteen (18) months after the rendering of any such bill or bills for taxes equal to or in excess

of $15,000 in any year, on which payment is refused by Receiving Company.

[22909] (page 14)

ARTICLE XII

Assignment

This contract shall enure to and be binding upon the successors and assigns of the respective parties hereto.

In Testimony Whereof the parties hereto have caused these presents to be signed in their corporate names by their authorized officers and their corporate seals to be hereunto affixed, and duly attested as of the day and year first above written.

APPENDIX "A"

Lancaster Power Supply Contract of May 1, 1933

Million KWH of Lancaster Load Requirements Supplied per Month	Amount to be Billed
7.0	$43,411.00
7.1	44,086.00
7.2	44,761.00
7.3	45,436.00
7.4	46,111.00
7.5	46,786.00
7.6	47,461.00
7.7	48,136.00
7.8	48,811.00
7.9	49,486.00
8.0	50,161.00
8.1	50,836.00
8.2	51,511.00
8.3	52,186.00
8.4	52,861.00
8.5	53,536.00
8.59	54,143.50
8.6	54,243.50
8.7	55,243.50
8.8	56,243.50
8.9	57,243.50
9.0	58,243.50
9.1	59,243.50

[22911] (page 16)

9.2	60,243.50
9.3	61,243.50
9.340147	61,644.97
Above 9.340147	See Note

Note: For supply of less than 7,000,000 Kwh., deduct $675.00 for each 100,000 Kwh. of deficiency below 7,000,000 Kwh.

For supply in excess of 9,340,147, add $660.00 for each 100,000 Kwh. of such excess.

If in any twelve months' period ending April 30th, the monthly Lancaster Load Requirements supplied under the Lancaster Power Supply Contract of May 1, 1933, fluctuate above and below 9,340,147 Kwh. per month, an ADJUSTMENT in payments shall be made at the end of the twelve months' period as follows: Receiving Company shall pay Generating Company an ADJUSTMENT which shall be *the smaller* of the two following amounts:

A. An amount determined by multiplying (3.4 mills) by (The sum of the differences between the Kwh. of Lancaster Load Requirements actually supplied and 9,340,147 Kwh. for those months in which this actual supply shall have exceeded 9,340,147 Kwh.).

B. An amount determined by subtracting (The sum of the amounts actually paid during the twelve months' period for Lancaster Load Requirements) from (The product of "the total kilowatt-hours of Lancaster Load Requirements supplied during the twelve months' period" and "6.6 mills").

(*Initialed*) J. A. W.
J. S. W., JR.

[22914]

[Letterhead of]

PENNSYLVANIA WATER & POWER COMPANY
LEXINGTON BUILDING
Baltimore, Md.

April 28, 1939

Re: Provisions in Connection with Parallel Operation of Lancaster Division with Main System of Pennsylvania Power & Light Company

Mr. J. S. Wise, Jr. President
Pennsylvania Power & Light Company
Allentown, Pennsylvania

Dear Sir:

The Renewal Agreement of May 1, 1933 (Main Contract), and the Letter Agreement of June 11, 1934 contain certain provisions in regard to parallel operation with Receiving Company's main system, requiring both parties to jointly work out numerous details concerning the character and division of cost of facilities, methods of operation, etc. A practical solution of these composite problems has been reached as the result of many tests, engineering studies and conferences, followed by prolonged periods of experimental operation, and represents a mutually satisfactory interpretation of those clauses in the existing agreements for the conditions at present obtaining and applicable until modified by mutual consent as further investigations or changed conditions may require in order to fulfill the intent of the above Renewal Agreement.

(1) *Letter Agreement of June 11, 1934 Superseded:*

The Letter Agreement of June 11, 1934 which has served the purpose of covering the interim period between initial Donegal service and regular parallel op-

eration is hereby superseded with respect to all its provisions except Paragraph (7) which shall continue in effect until Manor Substation is put into service.

(2) *Right-of-Way:*

Holtwood Company will grant Receiving Company a [22915] (Folio 2) right-of-way on a temporary easement basis for the duration of the Contract along the route now occupied by Receiving Company's Donegal circuit and extending to Manor Substation. In the event of termination of the Contract, Holtwood Company will grant Receiving Company without charge a right-of-way on a permanent easement basis across its property at a point about one-half mile above Witmer's Mill Bridge over Conestoga Creek.

(3) *Termination:*

Each party agrees not to exercise its right of eighteen months' notice of termination (Article I of the Main Contract) prior to midnight of April 30, 1945. The original term of the Contract is thereby extended from October 31, 1940 by three successive two-year periods to October 31, 1946.

(4) *Delivery Points:*

Supplementing Article III, Section 3 of the Main Contract 60 cycle power and energy, in addition to the points specified therein, shall also be delivered at the Safe Harbor end of Receiving Company's 60 cycle Safe Harbor-Donegal-Harrisburg transmission line.

(5) *Continuation of 4,000 Volt Service at Holtwood Power House:*

The low voltage supply for a portion of the territory of the former Pioneer Electric Light Company (now part of and connected to Receiving Company system), which supply, subsequent to the expiration of the agreement of March 13, 1926 has been furnished

under a verbal understanding at the rate of 15 mills per Kwh. shall be continued at the same rate and under the same conditions as at present. The energy supplied at 4,000 volts at Holtwood shall be billed separately and shall not be included in the Lancaster Load Requirements as defined in Article IV, Section 1, of the Main Contract.

(6) *Metering:*

Supplementing Article III, Section 4, of the Main Contract:

Previous to completion of Manor Substation, power and energy delivered hereunder at Safe Harbor referred to in Paragraph (4) above, for use in the Lancaster [22916] (Folio 3) Division shall be metered at the low tension terminals of the step-down transformers at Donegal and South Manheim Substations. Power and energy delivered at Safe Harbor for use or interchange, outside the Lancaster Division shall be metered at Harrisburg Substation at 66 Kv.

After completion of Manor Substation, the net amount of power and energy delivered by, or to, Safe Harbor and Harrisburg over the Donegal circuit, for use or interchange either inside or outside the Lancaster Division, shall be determined as of the 66 Kv. side of Donegal Substation, by employing directional billing Kwh. meters and a so-called "loss" Kwh. meter installed at Harrisburg, together with a like installation at Safe Harbor. The "loss" meter at Harrisburg shall be calibrated to record losses in the 66 Kv. line between Harrisburg and Donegal, and the "loss" meter at Safe Harbor shall be calibrated to record the losses in the 66 Kv. line between Manor Substation and Donegal. The registration of billing meters and loss meters shall be used to compute as accurately as practicable the net amount of power and energy interchanged as

of Donegal Substation between Manor Substation and Harrisburg, as well as the net amount of power and energy delivered at Donegal for use in the Lancaster Division.

Necessary billing meters shall be installed and maintained by and at the expense of Generating Companies, with the exception of those at Harrisburg Substation which shall be at the expense of Receiving Company.

(7) *Manor Substation and Transmission Line:*

On or before November 1, 1941, (unless development of a new type of circuit breaker will require a longer time in which event a date not later than May 1, 1943 shall be agreed upon between the parties) Generating Companies will construct and thereafter will operate and maintain at a location near the Safe Harbor plant, a high tension bus and switching station (to be known as Manor Substation), shown schematically on attached diagram, Exhibit M, and will construct a double circuit steel tower transmission line to connect Receiving Company's [22917] (Folio 4) double circuit line at Lehman Farm with Manor Substation.

Receiving Company is hereby granted the right to use said line as a part of its system. Receiving Company shall, at its expense, operate said line and maintain it in good operating condition. However, all renewals and replacements necessary to keep said line in good operating condition shall be made by Generating Companies at their expense.

For the right to use said line Receiving Company shall make monthly payments to Generating Companies at the rate of 1% per month of the actual cost of constructing said line, which cost shall not exceed $40,000.00, beginning with the first full calendar month after said line and Manor Substation are put into operation.

Upon completion of the construction work, Generating Companies will send Receiving Company a statement of the actual cost of constructing the said line, including reasonable charges for overhead, and will give Receiving Company an opportunity to verify any or all of the cost items for this work.

(8) *Method of Operation:*

As the control of the flow of power in conformity with Sections 2 and 3 of Article IV of the Main Contract might under certain conditions require costly and special facilities not otherwise justified Generating Companies and Receiving Company hereby adopt the practical interpretation of these provisions described below, including conditions covering intentional and unintentional flow of power and energy in excess of the minimum or maximum limits specified in the Flexibility Provisions in Article IV. Under this plan, Generating Companies with the aid of telemetered load indications transmitted by Receiving Company from Harrisburg to Safe Harbor, will endeavor to regulate, approximately in accordance with the desired schedule, the net flow of power over Receiving Company's Harrisburg-Donegal line and over paralleling lines of other parties.

[22918] (Folio 5)

(9) *Flexibility Provisions:*

Receiving Company, effective as of November 1, 1939, shall have the following options with respect to the Flexibility Provisions of the Main Contract:

Option A—Continue to operate as at present, taking excess energy and supplying portions of the Lancaster Load Requirements, as provided in Sections 2, 3 and 4 of Article IV.

Option B—Receive and pay for the amount of energy which Generating Companies are obligated to supply under the provisions of Section 2 (a) of Article IV of the Main Contract; and suspend all the other Flexibility Provisions (Sections 2 (b), 3 and 4 of Article IV) except the last two paragraphs of Section 3. During the period of such suspension Generating Companies will credit Receiving Company with an amount equal to 0.10 mill ($0.0001) times the number of Kwh. of Lancaster Load Requirements.

Option C—Receive and pay for the entire Lancaster Load Requirements and suspend all of the Flexibility Provisions (Sections 2, 3 and 4 of Article IV). During the period of such suspension Generating Companies shall be obligated to supply the Lancaster Load Requirements at all times.

Such options or change of one plan of operation to another shall be exercised by Receiving Company after written notice to Generating Companies, as follows:

From Option A to Option B or from Option B to Option A—60 days' notice.

From Option A or Option B to Option C—18 months' notice.

From Option C to Option A or Option B—12 months' notice.

[22919] (Folio 6)

The minimum length of time each option shall continue in effect shall be:

Option A—12 months. Option B—12 months.
Option C—24 months.

(10) *Capacity Service in Excess of Generating Companies' Obligation Under Section 2 of Article IV of the Main Contract:*

(A) *Firm Peak Service:*

In case Receiving Company becomes deficient in Firm Load Carrying Capacity for its Harrisburg area it shall purchase and Generating Companies shall supply the amount of such deficiency (not exceeding 15,000 Kw.) at the rate of 75¢ per kilowatt per month during the first month in which such deficiency occurs and in succeeding months until such deficiency is eliminated. Receiving Company may eliminate such deficiencies by increasing the Firm Load Carrying Capacity for its Harrisburg area by increasing generating capacity in that area, increasing firm capacity delivered over transmission lines from its main system (directly or indirectly) or purchasing firm capacity from neighboring systems.

The Firm Load Carrying Capacity for the Harrisburg area shall be the total capacity available for that area with the generating unit, transmission line, transformer or other facility out of service which results in the second largest reduction in available capacity.

The Deficiency in Firm Load Carrying Capacity for the Harrisburg area for any month shall be the positive difference between Receiving Company's maximum one-hour integrated load in the Harrisburg area in that month or any of the twenty-three preceding months and the Firm Load Carrying Capacity for the Harrisburg area. The Firm Loading Carrying Capacity for the Harrisburg area has been determined under the now existing conditions and shall be redetermined from time to time when requested by Generating Companies.

[22920] (Folio 7)

As to energy commitment, Generating Companies shall be obligated to supply to Receiving Company, when requested by Receiving Company, the energy represented by the area under a load curve consisting of the Harrisburg area load above a horizontal line (on the same curve) which is obtained as the maximum one-hour integrated load in the Harrisburg area less Receiving Company's Deficiency in Firm Load Carrying Capacity for that area as defined in the preceding paragraph. That part of such energy which is delivered to the Harrisburg area shall be paid for by Receiving Company on the basis of economy flow, except when needed under emergency conditions in which case the charges specified in Paragraph (12) below shall apply. The above defined energy and capacity service shall be known as "Firm Peak Service."

(B) *Secondary Capacity Service:*

During those months when Receiving Company purchases the above described "Deficiency in Capacity" from Generating Companies, Receiving Company in addition to the energy service specified in the preceding paragraph shall also be entitled to Secondary Capacity Service supplementary to, but not exceeding the amount of Deficiency in Capacity purchased during that month and Generating Companies shall supply such additional capacity service when requested by Receiving Company under the following conditions:

(a) *Week-end Service:*

From 1:00 P. M. on Saturday until 7:00 A. M. on Monday.

(b) *Work Week Service:*

In any calendar week when the unregulated river flow at Holtwood, i. e., the effect of

pondage and up-river storage (if any) eliminated, is greater than 6,000 c. f. s., but not greater than 10,000 c. f. s., Receiving Company may call on Generating [22921] (Folio 8) Companies for Secondary Capacity Service over and above the week-end service under paragraph (a) above, up to an amount equal to 30 hours' use, including therein the Kwh. comprised in Firm Peak Service, of the Kw. Firm Capacity currently paid for by Receiving Company, provided, however, that the amount of capacity service hours thus supplied shall not in any four consecutive weeks aggregate more than 60 hours' use of the Firm Capacity Service paid for.

In any calendar week when the average unregulated river flow at Holtwood is greater than 10,000 c. f. s., Receiving Company may call on Generating Companies for Secondary Capacity Service over and above the week-end capacity service up to an amount equal to 60 hours' use, including therein the Kwh. comprised in Firm Peak Service, of the Kw. Firm Capacity currently paid for by Receiving Company.

(c) All energy supplied under this Secondary Capacity Service shall be paid for at the same rates as the energy supplied under Firm Peak Service, i. e., on the basis of economy flow, except when needed under emergency conditions, in which case the charges specified in Paragraph (12) below shall apply. Generating Companies, except for week-end capacity service, shall not be obligated to supply Secondary Capacity Service on days when the river flow is greater than 300,000 c. f. s.

Receiving Company's entitlement for Firm and Secondary Capacity Service shall not be used intentionally for delivery or resale to Metropolitan Edison Co. or to other parties outside of Receiving Company's own power and distribution system, except as may be agreed upon from time to time between the parties hereto.

[22922] (Folio 9)

(11) *Interchange:*

The parties will interchange electric energy and capacity for the purpose of securing economies in the production of energy and in the protection of service. Energy so interchanged shall be paid for commencing with the month of November 1939 as follows:

(a) "Steam Economy Flow" energy and capacity shall be paid for on a basis which will give each party one-half of the total savings resulting from such interchange.

(b) "Hydro Economy Flow" energy shall be paid for on a basis which will give Receiving Company a saving of 0.6 mill per Kwh. plus an additional saving, if any, equal to one-half of the excess of Receiving Company's incremental cost above 2.3 mills per Kwh. Receiving Company will make every reasonable effort to utilize a maximum amount of hydro energy offered by Generating Companies.

(c) "Unintentional" energy shall be accounted for as steam economy flow and shall be paid for on the same basis as steam economy flow. Interchange of unintentional energy shall be kept at a minimum and whenever possible such flow of energy that is unavoidable will be maintained toward the system with the higher cost.

(12) *Emergency Supply:*

Each party agrees that it will not depend on the other for capacity, either installed or operating, in excess of the amount to which it is entitled under the provisions hereof. In case of breakdowns of generating equipment, transmission lines or of any other emergency, each party will upon request assist the other to the graetest extent possible without, however, curtailing or adversely affecting its own services or firm power commitments to third parties. Such emergency assistance shall be paid for at actual out-of-pocket cost to the assisting [22923] (Folio 10) party plus ten per cent. Hydro energy supply which may form part of such emergency assistance shall be paid for at 2.5 mills per Kwh.

(13) *Credit for Greater Utilization of Generating Companies' Present Facilities:*

During those months in which the amount of energy actually supplied by Generating Companies for use in the Lancaster Division is greater than 13.5 million Kwh, Generating Companies shall credit Receiving Company, commencing with the month of November, 1939, at the rate of 0.6 mill per Kwh. on the monthly energy supplied at the rate of 6.6 mills per Kwh. in excess of 13.5 million Kwh.

(14) *Joint Use of Transmission Facilities:*

In order to secure the greatest practical benefit in the utilization of those tie-in facilities in the Harrisburg and Lancaster areas which may be available to either party providing a path between Generating Companies and Receiving Company in parallel with a path owned by or available to third parties with whom both parties are interconnected, each party will permit the free-of-charge use by the other party of the capacity, not needed for its own requirements at the time, of

transmission facilities owned or controlled by it for the purpose of transmitting or receiving capacity and energy to or from third parties. The transmitting party will be compensated for actual out-of-pocket operating cost involved in such transactions.

Nothing contained herein shall be construed to permit either party to use the other party's facilities directly or indirectly in competition with the other party, or in a manner that may otherwise affect adversely the interests of the other party.

[22924] (Folio 11)

If the foregoing is acceptable to you as a mutually satisfactory solution and interpretation of features previously referred to in existing agreements, at least in so far as these problems can be anticipated at this time in a practical manner, please indicate your acceptance by signing this letter in the space provided and return one copy to us, retaining the other for your files.

Yours very truly,

EXHIBIT No. 87

[22950]

IN THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA.

PENNSYLVANIA WATER & POWER COMPANY,
A CORPORATION,
Petitioner,

v.

FEDERAL POWER COMMISSION,
Respondent.

To the Honorable, the Judges of the United States Court of Appeals for the District of Columbia:

Pennsylvania Water & Power Company, a corporation, petitioner, files its petition under Section 313 (b) of the Federal Power Act (49 Stat. 860. 16 U. S. C. 825 (1), Title II of the Public Utility Act of 1935, approved August 25, 1935, amending the Federal Water Power Act, approved June 10, 1920, 41 Stat. 1063, 16 U. S. C. 791-823) against the Federal Power Commission, hereinafter designated as respondent or the Commission, to review and set aside an order entered by it on the 3rd day of November, 1939, and thereupon shows unto the Court:

1. Petitioner is a corporation, incorporated under the laws of the Commonwealth of Pennsylvania on January 13, 1910 by the purchasers at foreclosure of the property and franchises of McCall's Ferry Power Company, a Pennsylvania corporation. Continuously since October, 1910, petitioner has owned, maintained and operated, for the purpose of developing electric power, a dam, reservoir, power house and other [22951] (page 2) works incidental thereto (hereinafter sometimes called the Holtwood Development)

across and in the Susquehanna River, at Holtwood, near McCall's Ferry, Pennsylvania. For many years petitioner has sold electric energy, so developed, at wholesale in interstate commerce. The Holtwood Development was constructed by petitioner and its predecessor, McCall's Ferry Power Company and the receiver thereof, at a cost of millions of dollars, in the exercise of the rights of petitioner and its predecessor as owners of land on both banks of the Susquehanna River and of rights under various statutes and laws of Pennsylvania and under various proceedings thereunder, and in compliance with all applicable laws of Pennsylvania or of the United States. In the operation of the Holtwood Development petitioner conserves and utilizes, and always has conserved and utilized, the water-power resources available to it to the utmost, and also cooperates with other users of water-power in conserving and utilizing the water-power resources of the region to the utmost. There is no navigation in the region and there are no navigation resources of the region. Construction of the dam and other works was begun in 1905, and the first unit was completed and put in operation in October, 1910. The Holtwood Development is about 24.5 miles above the mouth of the Susquehanna, 20 miles above tidewater, 9 miles above the state line between Pennsylvania and Maryland, 18 miles below Columbia and Wrightsville and 35.5 miles below Middletown.

EXHIBIT No. 93.

S. H. W. P. CORP. ANNUAL REPORT TO S. E. C. FOR YEAR ENDED 12/31/35

* * *

By a contract dated June 1, 1931, between Registrant and Holtwood and Consolidated Companies, to remain in force until April 22, 1980, Holtwood Company is entitled to one-third and Consolidated Company to two-thirds of all the capacity and energy available from Registrant's initial hydroelectric development and the two purchasing companies are to make annual payments to Registrant in the same proportion. By a contract made as of June 1, 1931, between Holtwood Company and Consolidated Company, (supplementing contract of December 31, 1927) to remain in force until April 22, 1980, Consolidated Company is entitled to all the electrical capacity and energy available to Holtwood Company at its own plant and also from that of Registrant under the above mentioned three party contract, not otherwise disposed of in performance of other contracts or legal obligations to serve. In return, Consolidated Company is to make to Holtwood Company annual payments computed in accordance with the provisions of the contract, subject to modification by regulatory authorities.

SAFE HARBOR WATER POWER CORPORATION, REGISTRANT, PROFIT AND LOSS STATEMENT FOR YEAR ENDED DECEMBER 31, 1935.

Explanation	Item	Amount
1.B. *Operating Revenues:*		
From Sale of Electrical Energy in Bulk to the Follow-Customers:		
Consolidated Gas Electric Light and Power Company of Baltimore (Note)		$ 1,200,000.00
Pennsylvania Water & Power Company (Note)		600,000.00
TOTAL OPERATING REVENUE		$ 1,800,000.00
2.B. *Operating Expenses:*		
(a) Hydraulic Generating System Expenses	$ 196,654.66	
(b) Administrative and Other General Expenses	126,348.11	$ 323,002.77
(c) Maintenance and Repairs (Schedule X)		45,390.97
(d) Renewals and Replacements Expense (Depreciation) (Schedule X)		147,152.98
(e) Taxes (Other Than Income Taxes) (Schedule X)		95,177.11
TOTAL OPERATING EXPENSES		$ 610,723.83

INCOME FROM OPERATIONS		$ 1,189,276.17
OTHER INCOME:		
10. *Miscellaneous Other Income*		37.60
GROSS INCOME		$ 1,189,313.77
INCOME DEDUCTIONS:		
13. *Interest And Debt Discount And Expense*		
(a) Interest on Funded Debt	$ 945,000.00	
(b) Amortization of Debt Discount and Expense	55,506.00	
TOTAL INCOME DEDUCTIONS		$ 1,000,506.00
16. NET INCOME		$ 188,807.77

Note—The revenues from sale of electrical energy to Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water & Power Company were received pursuant to the terms and conditions of an agreement dated June 1, 1931 between these companies and Registrant. These two customers each own 50% of the outstanding voting stock of Registrant. Registrant does not admit that either of these companies is an affiliate or parent of Registrant. (See Item 1, Page 1.)

EXHIBIT NO. 97.

[22979]

SAFE HARBOR WATER POWER CORPORATION

ANNUAL REPORT TO S. E. C. FOR YEAR ENDED DECEMBER 31, 1939

NOTES TO PROFIT AND LOSS STATEMENT

Note 1.—

The revenues from sales of electric energy to Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water & Power Company were received pursuant to the terms and conditions of an agreement dated June 1, 1931 between these companies and the Registrant. These two customers each own 50% of the outstanding voting stock of the Registrant.

On November 9, 1937, the Federal Power Commission instituted an investigation of the rates and other terms of the contract dated June 1, 1931, between the Registrant, Pennsylvania Water & Power Company and Consolidated Gas Electric Light and Power Company of Baltimore, under which the Registrant sells its entire output to the two latter companies, to determine whether any of the provisions of the Federal Power Act, or any rule or regulation of the Commission is being violated, and whether the rates are unjust, unreasonable or discriminatory. The Federal Power Commission by an order dated September 19, 1939 granted leave to the People's Counsel to the Maryland Commission to intervene in these proceedings. A hearing before an examiner was held on October 9, 10, 11, 12, 16, 17, 18, 19 and November 6, 1939. The Commission has not yet made a decision. At the hearing, and in briefs filed since the hearing, counsel for the Commission have contended that the rates that the Registrant is receiving under the contract are excessive and should be substantially reduced.

EXHIBIT NO. 105.

[23004] (page 10)

SAFE HARBOR WATER POWER CORPORATION

NOTES PERTAINING TO FINANCIAL STATEMENTS

(Concluded)

Note 6.—

The revenues from sales of electric energy to Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water & Power Company were received pursuant to the terms and conditions of an agreement dated June 1, 1931 between these companies and the Registrant. These two customers each own 50% of the outstanding voting stock of the Registrant.

On September 1, 1944, the Federal Power Commission issued an order instituting an investigation to determine whether, in connection with any transmission or sale of electrical energy subject to the jurisdiction of that Commission under the Federal Power Act, any rates, charges

or classifications demanded, observed, charged or collected by Registrant, or any rules, regulations, practices or contracts affecting such rates, charges or classifications are unjust, unreasonable, unduly discriminatory or preferential; and if, after hearing, it should be found that any of such rates, charges, classifications, rules, regulations, practices or contracts are unjust, unreasonable, unduly discriminatory or preferential to determine and fix just and reasonable rates, charges, classifications, rules, regulations, practices or contracts to be thereafter observed and in force. Hearings in this matter were concluded March 16, 1945 and briefs have been filed by the Registrant and the Commission, but no decision has been rendered by the Commission and the Registrant cannot determine at this time the extent to which its future net income may be affected thereby.

PENNSYLVANIA WATER & POWER COMPANY SYSTEM

NOTES PERTAINING TO CONSOLIDATED PROFIT AND LOSS STATEMENT FOR YEAR ENDED DECEMBER 31, 1935

NOTE 1.

Registrant's books of account reflect all revenues and expenses, including depreciation expense and the accompanying depreciation reserve accounts, applicable to its wholly-owned subsidiary transmission companies; Susquehanna Transmission Company of Maryland, Susquehanna Transmission Company of Pennsylvania and Pennsylvania Transmission Company. This policy was adopted by virtue of the contractual relationship which has existed between Registrant and these particular Companies since their inception and which made it possible for the Registrant to retain direct control over these Companies at all times through ownership of all their outstanding securities. The properties of Registrant and these subsidiaries are coordinated and operated as a unit by a common organization and contracts for the sale of electrical energy have been predicated on this basis. This policy was first adopted January 1, 1911, when the Registrant's properties were placed on a commercial operating basis and has been followed consistently since that date, both with respect to its accounts and reports to the investing public.

The same principle of consolidation has been adopted in the preparation of this statement as was followed in the consolidated balance sheet presented herein.

NOTE 2. (Caption 1. B.)

This amount ($5,819,560.21) represents, with the exception stated below, the revenues received from the sale of electrical energy to five customers and, of this sum, $4,074,939.59 represents the revenue from the sale of power to the Consolidated Gas Electric Light and Power Company of Baltimore under an agreement dated June 1, 1931. The latter amount is stated before the application of a credit of $177,945.59 which was allowed the Consolidated Company pursuant to the above agreement. In this connection, reference is made to the descriptive data covering the "Reserve for Special Equalization" of "Schedule VII, Reserves". Registrant does not admit that this Company is a subsidiary, affiliate or parent of Registrant. (See Item 1, page 1)

There is also included under this caption the sum of $133,750.00 which was received from the "Conowingo Companies" in 1935 as compensation for Registrant's loss in energy output and demand value of its plant as well as other losses, all of which arise from the construction and operation of former's hydroelectric plant at Conowingo, Md. The "Conowingo Companies" comprise The Susquehanna Power Company, The Susquehanna Electric Company and Philadelphia Electric Power Company.

NOTE 3. (Caption 2. B. (c))

The cost of electricity purchased from others was $628,284.82 in 1935 and of this amount $600,000.00 represents the cost of electrical energy purchased by Registrant from the Safe Harbor Water Power Corporation. This electricity was purchased pursuant to an agreement dated June 1, 1931, between Consolidated Gas Electric Light & Power Company and Registrant and the Safe Harbor Water Power Corporation. Registrant does not admit that either of these Companies is a subsidiary, affiliate, or parent of Registrant. (See Item 1, page 1)

PENNSYLVANIA WATER & POWER CO.

ANNUAL REPORT TO S. E. C. FOR YEAR ENDED DECEMBER 31, 1945

* * *

By a contract, dated June 1, 1931, and a supplemental contract dated November 22, 1939, with the Safe Harbor Corporation and the Consolidated Company, to remain in force until April 22, 1980, the Registrant is entitled to one-third and the Consolidated Company to two-thirds of all the capacity and energy available from the Safe Harbor Corporation's hydroelectric plant and the two purchasing companies are to make annual payments to the Safe Harbor Corporation in the same proportion. By supplemental contracts, made as of June 1, 1931 and September 29, 1939 between the Registrant and the Consolidated Company (supplementing contract of December 31, 1927) to remain in force until April 22, 1980, the Consolidated Company is entitled to all the electric capacity and energy available to the Registrant at its own plant and also from that of the Safe Harbor Corporation under the above-mentioned three party contracts, not otherwise disposed of in performance of other contracts or legal obligations to serve. In return, the Consolidated Company is to make to the Registrant annual payments computed in accordance with the provisions of the contracts.

NOTE 2. (Item 1. B.)

This amount ($5,415,433.06) represents, with the exception stated below, the revenues received from sale of electrical energy to five customers and, of this sum, $3,654,652.43 represents the revenues from sale of power to the Consolidated Gas Electric Light and Power Company of Baltimore under an agreement, dated June 1, 1931 (See Exhibit H-2). The latter amount is stated before the application of a credit of $225,000 which was allowed the Consolidated Company pursuant to paragraph (g) of Article III of the above agreement. In this connection, reference is made to the descriptive data covering the "Reserve for Special Equalization" of "Schedule VI. Reserves". Registrant does not admit that this company is a subsidiary, affiliate or parent of Registrant. (See Item 10, page 2)

[23065] (page 59)

* * *

NOTE 3. (Item 2. B. (c))

The cost of electricity purchased from others was $558,071.21 in 1934 and of this amount $533,333.33 represents the cost of electrical energy purchased by Registrant from the Safe Harbor Water Power Corporation. This electricity was purchased pursuant to an agreement dated June 1, 1931, between Consolidated Gas Electric Light and Power Company and Registrant and the Safe Harbor Water Power Corporation: a copy of which is submitted herewith and identified as Exhibit H-1. Registrant does not admit that this company is a subsidiary or affiilate of Registrant. (See Item 10, page 2)

REGISTRATION STATEMENT FILED 1/4/40 WITH S. E. C. BY P. W. & P. CO.

* * *

By a contract, dated June 1, 1931, and a supplemental contract dated November 22, 1939, with the Safe Harbor Corporation and the Consolidated Company, to remain in force until April 22, 1980, the Company is entitled to one-third and the Consolidated Company to two-thirds of all the capacity and energy available from the Safe Harbor Corporation's hydroelectric plant and the two purchasing companies are to make annual payments to the Safe Harbor Corporation in the same proportion. By supplemental contracts, made as of June 1, 1931, and September 29, 1939, between the Company and the Consolidated Company (supplementing contract of December 31, 1927) to remain in force until April 22, 1980, the Consolidated Company is entitled to all the electric capacity and energy available to the Company at its own plant and also from that of the Safe Harbor Corporation under the above mentioned three party contracts, not otherwise disposed of in performance of other contracts or legal obligations to serve. In return, the Consolidated Company is to make to the Company annual payments computed in accordance with the provisions of the contracts. Copies of these contracts are filed herewith as Exhibits I-6(a), I-6(c), I-5(c), I-5(d) and I-5(a), respectively to which reference is hereby made. Reference is also made to subdivision (2) of the answer to Item 40 regarding the investigation of the contract with the Safe Harbor Corporation by the Federal Power Commission and the answer to Item 5 under the caption "State Regulation" regarding a recent investigation by the Maryland Public Service Commission of the contract with the Consolidated Company.

[23079] (page 4)

HISTORY AND BUSINESS.

5. Outline briefly the general character of the business done and intended to be done by the registrant and its subsidiaries.

The Company is a public utility engaged in the business of generating, purchasing, selling and transmitting electric power and energy, largely at wholesale. Its generating properties consist of a 111,000 k.w. hydroelectric plant and a 20,000 k.w. steam-electric plant located at Holtwood, Pa., on the Susquehanna River. It does no distribution business. The transmission lines of the Company and its wholly-owned subsidiary, Susquehanna Transmission Company of Maryland, are an integral part of the regional power supply system referred to below (see the map referred to in Item 7).

The hydroelectric plant of Safe Harbor Water Power Corporation, located about eight miles above the Company's generating plants at Holtwood, Pa., has a capacity of 180,000 k.w. and has been tied in with the Company's hydroelectric and steam-electric plants and the steam-electric plants of Consolidated Gas Electric Light and Power Company of Baltimore by transmission lines owned by the Company or its wholly-owned transmission subsidiary. Power resources of the three companies are thus coordinated and operated as a regional power supply system. Most of the transmission lines were constructed primarily for the purpose of supplying individual customers of the Company. Those lines and the other lines owned by the Company or its wholly-owned transmission subsidiary, also serve as tie lines between the companies composing this regional power supply system, one to the other, and as lines for the delivery of power from or to the wholesale customers of one or more of such companies.

Pursuant to individual contracts with customers, the Company sells electric energy to six customers. The names

of the Company's customers, the date when such customer (or its predecessor) was first served by the Company, together with a reference to the subdivision or subdivisions of the answer to Item 41 in which the principal sales contract or contracts with such customer are summarized, are as follows:

Name of Customer	Date First Served	Reference to Subdivisions of the Answer to Item 41
Consolidated Gas Electric Light and Power Company of Baltimore	1910	5 & 6
Pennsylvania Power & Light Company	1913	7
Edison Light & Power Company	1923	8
Philadelphia Electric Company	1923	9 & 10
The Pennsylvania Railroad Company	1938	10, 12 & 13
Metropolitan Edison Company (interchange only)	1932	11

The Company delivers to the Consolidated Company under contracts (referred to in subdivisions (5) and (6) of the answer to Item 41) all the electric energy available at its own plants and available to it from the Safe Harbor Corporation's plant (pursuant to the contract referred to in subdivision (6) of the answer to Item 41) and elsewhere not otherwise disposed of in performance of other contracts or legal obligation to serve and permits the Consolidated Company to use certain transmission and substation facilities.

The Company, the Consolidated Company, the Safe Harbor Corporation and Potomac Electric Power Company supply electric energy to The Pennsylvania Railroad Company under contracts (referred to in subdivisions (10), (12) and (13) of the answer to Item 41), covering the entire electrification requirements for its railroad system between Perryville, Md. and Washington, D. C., between Thorndale,

Pa. and Harrisburg and Enola, Pa., and between Columbia, Pa. and Perryville, Md. and in yards adjacent thereto and supporting these services. Service to the Railroad Company for its lines in Maryland and the District of Columbia began in February, 1935 and for its lines in Pennsylvania in January, 1938.

Substantially all of the fuel for the operation of its steam-electric plant is provided by the recovery and treatment of coal which the Susquehanna River and its tributaries wash down from the anthracite regions of Pennsylvania and which is deposited in the bed of the River. The Company obtains this coal by having it dredged, and purchases coal dredged by others, from the River above the dam at Holtwood.

The Company and its wholly-owned subsidiary, Susquehanna Transmission Company of Maryland, intend to continue in business of the general character described above.

The Company does not undertake to indicate either what, if any, hydroelectric sites are or may become susceptible of economic development by private or governmental interests or what, if any, effect any such development would have on the Company's business.

* * *

[23080] (page 6)

* * *

FEDERAL REGULATION

FEDERAL POWER ACT

The Company and its wholly-owned subsidiary, Susquehanna Transmission Company of Maryland, are subject to the jurisdiction of the Federal Power Commission under Part II of the Federal Power Act which provides that the Commission shall have jurisdiction over the business of, and facilities for, transmission of electric energy in interstate commerce and sale of electric energy at wholesale in interstate commerce. Such jurisdiction as set forth in Parts

II and III of said Act, extends to the interconnection and coordination of facilities, the sale; lease or other disposition of facilities, the merger or consolidation of facilities, the issuance and purchase of securities, the assumption of liabilities, rates, charges, services, accounting, valuation, rates of depreciation, generation of electric energy (during wars in which the United States is engaged and other emergencies) and other matters.

Under the provisions of the Federal Power Act authorization from said Commission, in the opinion of counsel for the Company, is not necessary for the issuance of the securities registered hereunder because the Company is organized and operating in Pennsylvania, a State under the laws of which its security issues are regulated by a State Commission.

Reference is made to the statements above under "State Regulation" with respect to the system of accounts prescribed by the Federal Power Commission effective January 1, 1937.

Certain officers and directors of the Company have filed applications pursuant to Section 305 (b) of the Federal Power Act, with the Commission for authorization to continue to hold the position of officer and/or director in two or more public utilities and certain other companies, including the Company, the Consolidated Company, the Safe Harbor Corporation and the wholly-owned subsidiary transmission companies of the Company. In 1938, the Commission conducted public hearings on these applications and similar applications filed by certain officers and directors of the Consolidated Company and the Safe Harbor Corporation. On October 2, 1939, the Commission held another hearing for the purpose of hearing further evidence, but has not, as yet rendered any decision. Reference is made to the answer to Item 30 for names of officers and directors of the Company involved in these proceedings.

Reference is made to subdivision (1) of the answer to Item 40 relating to the investigation by the Federal Power

Commission to determine the authority, if any, under which the Company's hydroelectric plant is maintained and operated, and to the order of the Commission therein.

Reference is made to subdivision (2) of the answer to Item 40 relative to an investigation ordered by the Commission of the rates charged by the Safe Harbor Corporation to the Company and the Consolidated Company.

NOTE 1:

A supplemental contract dated September 29, 1939 between the Company and the Consolidated Company was made, providing for a substantial reduction commencing December 1, 1939 in the charge to be made by the Company for power sales to the Consolidated Company. The Company estimates that, had the supplemental agreement been in effect during the entire year 1939, its operating revenues for that year would be approximately $300,000 less than the operating revenues expected for the year 1939; see subdivision (5) of the answer to Item 41 for a summary of the original and supplemental contract and other possible effects of the latter.

NOTE 2:

The amounts shown for the years 1936, 1935 and 1934 are without deductions of special allowances of $172,542.14, $177,945.59 and $225,000.00, respectively, granted the Consolidated Company, such allowances having been offset by transfers of like amounts from Reserve for Special Equalization to Operating Revenues. The amount shown for the year 1937 is after deduction of a similar allowance of $162,660.20, the Company having discontinued the operation of its Reserve for Special Equalization with the year 1936. Special allowances such as referred to above ceased at December 31, 1937. Reference is made to Note 2 of the consolidated profit and loss statement for further explanation of such special allowances and of the purpose and operation of the Reserve for Special Equalization.

NOTE 3:

These amounts represent revenues from sales of electric energy under interchange agreements. Under the new system of accounts prescribed by the Federal Power Commission, effective January 1, 1937, and adopted by the Pennsylvania Public Utility Commission as of the same date, the Company is required to treat the amount of such revenues as a credit to operating expenses, whereas under the system of accounts in effect prior to January 1, 1937, such revenues were credited to operating revenues.

[23082] (page 40)

* * *

CONTRACTS RELATING TO SALE, PURCHASE AND/OR INTERCHANGE OF ELECTRIC ENERGY

(5) *Contract dated December 31, 1927, and supplemental contracts dated December 27, 1928, June 1, 1931 and September 29, 1939, between the Company and Consolidated Gas Electric Light and Power Company of Baltimore (here called Consolidated Company) covering electric supply and other services to Consolidated Company.*

Under the terms of these contracts, the Company is to deliver to Consolidated Company all the electric capacity and energy available to the Company at its own plants and under the contract dated June 1, 1931 with Consolidated Company and Safe Harbor Water Power Corporation, herein designated as Exhibit I-6 (a), (not otherwise disposed of in performance of other contracts or any legal obligation to serve) and to permit Consolidated Company to use certain transmission and substation facilities. For this service Consolidated Company makes annual payments to the Company (prorated on a monthly basis and subject to increase or decrease by order of or pursuant to determination by regulatory authorities) which will consist of a net sum of $2,832,259.75 [23083] (page 41) (reduced to $2,762,179.69 by the operation of a contract provision) and in addition all the Company's reasonable operating expenses (as defined in the supplemental contracts of June 1, 1931 and September 29, 1939) plus and minus other items in the computation thereof, fully set forth in the supplemental contracts of June 1, 1931 and September 29, 1939. The latter supplemental contract was made as a result of an investigation by the Maryland Public Service Commission of the Company's contract with the Consolidated Company; see the answer to Item 5 under the caption State Regulation. Among the deductions in the computation is

the Company's revenue from Pennsylvania customers. An additional deduction will be made under the supplemental contract of September 29, 1939 in the amount of $600,000 per year commencing December 1, 1939. Included in operating expenses as defined in the supplemental contract of June 1, 1931 was a specified allowance for credit to the Company's reserve for renewals and replacements (depreciation) to continue only so long as such reserve did not exceed 15% of the Company's plant, property and equipment account. During 1938, credits to such reserve resulted in an excess over such 15% and payment to the Company in respect to its operating expenses did not therefore include the full amount of such specified allowance during that year and has not included any part of such allowance during 1939. This limitation on payment in respect to the Company's renewals and replacements (depreciation) reserve will cease on December 1, 1939. The Company estimates that the combined effect of these two provisions of the supplemental contract of September 29, 1939 will be approximately as follows: (1) A reduction in operating revenues of approximately $300,000 in each year when payment to the Company would not have included, under the June 1, 1931 supplemental contract, any part of the specified allowance for credit to renewals and replacements reserve; (2) A reduction in operating revenues of approximately $750,000 ($600,000 adjusted for effect of Federal and State income taxes) in each year when the full amount of the specified allowance for credit to renewals and replacements reserve would have been included. The supplemental contract of June 1, 1931, among other things, contains various provisions for cooperation between the Company and Consolidated Company in their operations, for a joint Operating Committee for this purpose and requires approval by Consolidated Company of certain contracts and other transactions by the Company. These contracts continue in force until April 22, 1980. Copies of the contract dated Decem-

ber 31, 1927, and supplemental contracts dated December 27, 1928, June 1, 1931 and September 29, 1939, are filed herewith as Exhibits I-5 (a), I-5 (b), I-5 (c) and I-5 (d), respectively.

(6) *Contract between the Company, Consolidated Gas Electric Light and Power Company of Baltimore (here called Consolidated Company), and Safe Harbor Water Power Corporation (here called Safe Harbor Corporation), Dated June 1, 1931, and supplemental contracts dated August 1, 1932 and November 22, 1939, covering the purchase of energy from Safe Harbor Corporation, supply of transmission service to Consolidated Company, and guarantee of bonds of Safe Harbor Corporation.*

Under the terms of these contracts, the Company and Consolidated Company are to receive one-third and two-thirds, respectively, of all the electrical capacity and energy available (not required by Safe Harbor Corporation to perform any legal obligation to serve) from Safe Harbor Corporation's initial six unit (255,000 horsepower or 180,000 kw.) hydroelectric development, and from the additional 42,500 horsepower water wheel turbine and generator now being installed in the Safe Harbor Plant in accordance with the supplemental contract of November 22, 1939, and are to make annual payments therefor (prorated on a monthly basis) in the same proportion (from which annual payments are to be deducted any income from other customers of Safe Harbor Corporation). The annual payments (which are subject to increase or decrease by regulatory authorities) increased each year from the rate of $1,400,000 per year for a part of 1932 to $2,500,000 for 1937, and since 1937 are to be amounts required to yield to Safe Harbor Corporation a net income of seven per cent. on its accumulated actual investment in its hydroelectric development (as defined in the contract). The Company transmits for Consolidated Company, Consolidated Company's

share of the energy available from Safe Harbor Corporation, and receives from Consolidated Company annual payments (prorated on a monthly basis) in respect of transmission lines and other facilities constructed for that purpose. The Company is obligated, in the event of its failure so to transmit Consolidated Company's share of such energy, to take, and pay for at the contract rate, Consolidated Company's share of such energy as well as its own share.

SAFE HARBOR WATER POWER CORPORATION

Notes to Profit and Loss Statement

* * *

NOTE 2:

The revenues from sales of electric energy to Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water & Power Company were received pursuant to the terms and conditions of an agreement dated June 1, 1931 between these companies and the Safe Harbor Corporation. These two customers each own 50% of the outstanding voting stock of the Safe Harbor Corporation. The Safe Harbor Corporation does not admit that, within the meaning of the Securities Act of 1933, as amended, either of these companies is an affiliate or parent.

On November 9, 1937, the Federal Power Commission instituted an investigation of the rates and other terms of the contract dated June 1, 1931, between the Safe Harbor Corporation, Pennsylvania Water & Power Company and Consolidated Gas Electric Light and Power Company of Baltimore, under which the Safe Harbor Corporation sells its entire output to the Company and the Consolidated Company, to determine whether any of the provisions of the Federal Power Act, or any rule or regulation of the Commission is being violated, and whether the rates are unjust, unreasonable or discriminatory. The Federal Power Commission by an order dated September 19, 1939 granted leave to the People's Counsel to the Maryland Commission to intervene in these proceedings. A hearing before an examiner was held on October 9, 10, 11, 12, 16, 17, 18, 19 and November 6, 1939. The Commission has not yet made a decision. At the hearing, and in a brief filed since the hearing, counsel for the Commission have contended that the rates that the Safe Harbor Corporation is receiving under the contract are excessive and should be substantially reduced.

EXHIBIT No. 134.

[23109] (page 1)

THIS AGREEMENT, made this 22nd day of June, 1938, beween PHILADELPHIA ELECTRIC COMPANY, a Pennsylvania Corporation, hereinafter referred to as "Philadelphia Company," and PENNSYLVANIA WATER & POWER COMPANY, a Pennsylvania Corporation, hereinafter referred to as "Holtwood Company,"

WITNESSETH THAT:

WHEREAS, Philadelphia Company and Holtwood Company, together with others, supply power from their respective electric power systems to The Pennsylvania Railroad Company for its extensive railroad electrification, under separate contracts; and

WHEREAS, it has been found mutually desirable to The Pennsylvania Railroad Company and the parties hereto to enter with others into an agreement of even date herewith, providing for the parallel operation of such electric systems through the power transmission lines of The Pennsylvania Railroad Company, which agreement is hereinafter referred to as "Railroad Parallel Operation Agreement;" and

WHEREAS, such parallel operation through The Pennsylvania Railroad Company's transmission system involves the unintentional shifting or flow of power at Perryville, Maryland, and Thorndale, Pennsylvania, at which points The Pennsylvania Railroad Company will provide switching and metering facilities for such parallel operation, and at the same time makes possible the intentional shifting of load, under the direction of the parties hereto, between the sources of power supply to The Pennsylvania Railroad Company, and the parties hereto desire to provide for such shifting and accounting between them therefor, as hereinafter set forth;

NOW, THEREFORE, the parties hereto, each in consideration of the undertakings of the other, hereby covenant and agree as follows:

SECTION 1. The shifting of load supplied to The Pennsylvania Railroad Company's transmission system from the electric power systems of the parties hereto, shall be measured by the meters provided by The Pennsylvania Railroad Company at Perryville, Maryland, and Thorndale, Pennsylvania, under the terms of the Railroad Parallel Operation Agreement, and the load so shifted and metered shall be hereinafter referred to as "energy interchange," whether such energy interchange is unintentional or is specifically arranged for by the dispatching organizations of the contracting parties. Energy flowing west through Thorndale and south through Perryville shall be considered for the purpose of this agreement as energy flowing from Philadelphia Company to Holtwood Company. Energy flowing east through Thorndale and north through Perryville shall, except as hereinafter provided, be considered for the purpose of this agreement as energy flowing from Holtwood Company to Philadelphia Company. The recording of and accounting for such energy interchange shall be based on the net hourly integrated flow at the two above-mentioned metering points.

SECTION 2. Each party shall appoint one representative to act as its agent in all operating, engineering and accounting matters pertaining to this agreement, which appointments shall be evidenced by written notice to the other party. Either party at any time may, by similar written notice, change its representative or withhold or withdraw from its representative the authority to act for it in any matters specified in the notice, provided that it designate in such notice another representative in respect to such matters. These representatives, to be known as the "Operating Committee," shall arrange for the exchange of routine operating records and shall have access to such

other records as may be required for obtaining the incremental costs and other essential data pertaining to the proper classification and evaluation of energy interchange. The Operating Committee shall also consider such other operating and engineering matters as may be suggested for securing additional benefits consistent with service standards and safety of equipment.

[23110] (page 2)

SECTION 3. Philadelphia Company and Holtwood Company will endeavor to control the supply of power to The Pennsylvania Railroad Company's transmission system in such a manner that the net energy interchange at Perryville and Thorndale will result in overall operating economies. Such operation shall be regularly carried out through the system load dispatchers under the direction of the Operating Committee. All energy interchange shall be classified as follows, and the rates to be paid for each classification shall be as specified:

(*a*) *Economy Energy* shall be defined, for the purpose of this agreement, as intentional energy interchange delivered or received by the parties hereto, for operating economies when the incremental costs on one system are lower than the incremental costs on the other system. If such energy is generated by steam on one system to replace energy that would otherwise be generated by steam on the second system ("steam economy energy"), the rate to be used for such energy interchange shall be equal to one-half (½) of the sum of the incremental costs on the two systems. If such energy is generated by water power on one system to replace energy that would otherwise be generated by steam on the second system ("hydro economy energy"), the rate to be used for such energy interchange shall be equal to seventy per cent. (70%) of the receiving company's incremental costs.

(*b*) *Emergency Energy* shall be defined, for the purpose of this agreement, as energy interchange supplied by one party to the other during an emergency, either by specific request of the other party or as the result of operating conditions that involve such energy interchange. The rate to be used for such energy interchange shall be equal to the supplying company's incremental costs plus ten per cent. (10%) thereof if such energy is generated by steam, and shall be two and five-tenth mills ($0.0025) per kilowatt hour if such energy is generated by water power.

(*c*) *Unintentional Energy* shall be defined, for the purpose of this agreement, as energy interchange between one system and the other when for operating reasons it is impossible to control exactly at all times the direction of power flow or the amount thereof in a manner which results in overall operating economies. Initially and until changed by mutual agreement, such energy interchange shall be accounted for as economy energy and at the rates specified in paragraph (*a*) of this Section.

SECTION 4. Energy interchange, the measurement and recording of which is described in Section 1 hereof, shall be adjusted for "peak transfer energy" which is specifically provided for in the Railroad Parallel Operation Agreement. Any such peak transfer energy supplied by Holtwood Company for Railroad Company's use north of Perryville or east of Thorndale shall be deducted from the actual metered energy flowing from Holtwood Company to Philadelphia Company. If Philadelphia Company furnishes all or any part of such "peak transfer energy", the amount so furnished shall be accounted for as though such energy actually flowed west through the meters at Thorndale or south through the meters at Perryville, and the rate to be used in accounting for such energy between the

parties hereto shall be the same as specified for economy energy under Section 3(*a*) hereof.

SECTION 5. In addition to the operating economies resulting from interchange of economy energy flow as herein provided, the parties hereto agree that they will effect such further savings as may be found practicable through co-ordinated operations and system planning of the water and steam power resources of their systems, and such savings will be equitably divided between the parties hereto.

SECTION 6. This agreement and the Railroad Parallel Operation Agreement of even date herewith are interdependent, shall become effective simultaneously and shall run concurrently, continuing in full force and effect so long as the Railroad Parallel Operation Agreement is in effect. It is agreed that this agreement shall not take effect until all legal prerequisites, if any, as to both said agreements have been consummated. The parties hereto shall cooperate in conforming to such prerequisites.

[23111] (page 3)

SECTION 7. This agreement shall bind and enure to the benefit of the parties hereto and their respective successors and assigns, but shall not be assigned by either party hereto without the prior written consent of the other.

IN WITNESS WHEREOF the parties hereto have caused this agreement to be executed by their respective officers thereunto duly authorized and their respective corporate seals to be hereunto affixed and attested, as of the day and year first above written.

EXHIBIT No. 135.

[23113] (page 1)

THIS AGREEMENT, made this 22nd day of June, 1938, between THE PENNSYLVANIA RAILROAD COMPANY, a Pennsylvania corporation, hereinafter referred to as "Railroad Company," of the first part, PHILADELPHIA ELECTRIC COMPANY, a Pennsylvania corporation, hereinafter referred to as "Philadelphia Company," of the second part, and CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a Maryland corporation, PENNSYLVANIA WATER & POWER COMPANY, a Pennsylvania corporation, and SAFE HARBOR WATER POWER CORPORATION, a Pennsylvania corporation, the last-mentioned three Companies hereinafter jointly referred to as "Electric Companies," of the third part, and the last-mentioned four Companies being hereinafter jointly referred to as "Supplying Companies,"

WITNESSETH THAT:

WHEREAS, under a contract dated July 21, 1927, between Railroad Company and Philadelphia Company, as heretofore amended and supplemented, including amendments set forth in a supplement thereto of even date herewith (said contract as so amended being hereinafter referred to as "1927 Contract"), and contract dated September 2, 1931, between Railroad Company and Electric Companies, as heretofore amended, including amendments set forth in a supplement thereto of even date herewith (said contract as so amended being hereinafter referred to as "1931 Contract"), Railroad Company has agreed to purchase certain power requirements from Philadelphia Company and Electric Companies, respectively; and

WHEREAS, it is mutually desirable to all parties to operate in parallel through the power transmission lines of Railroad Company by suitable facilities provided by Railroad Company for such operation:

NOW, THEREFORE, the parties hereto, each in consideration of the undertakings of the others, hereby covenant and agree as follows:

SECTION 1. Railroad Company shall supply at Perryville, Maryland, and Thorndale, Pennsylvania, suitable switches and metering equipment to permit parallel operation of the systems of the respective parties under normal operating conditions, and for segregating and disconnecting same in emergencies.

The meters to be installed by Railroad Company shall be of a standard type and manufacture, and shall accurately measure the energy in electrical units and in periods of time as required by the terms of this agreement. Electric Companies and Philadelphia Company shall have the right to be represented at the readings of these meters and at the checking, adjusting or changing thereof.

All meters shall be tested and calibrated when necessary by comparison with accurate standards and if, as a result of any test, a meter shall be found incorrect or inaccurate, it shall be restored to an accurate condition or a new meter shall be substituted. In case any party hereto shall at any time believe that any meter registers incorrectly, the party holding such belief shall have the right to require that a test be made of such meter. The party desiring such test shall make request therefor in writing upon the other parties, and thereupon such meter shall be tested and calibrated, and if it shall be found inaccurate it shall be restored to an accurate condition or a new meter shall be substituted. If, as a result of any test, any meter shall be found to register in excess of two per cent. (2%) either above or below normal, then the readings of such meter previously taken shall be corrected according to the percentage of inaccuracy so found, but no such correction, either in respect to maximum demand or kilowatt hours drawn and consumed, shall extend back beyond thirty (30) days previous to the day on which such inaccuracy shall

have been discovered by such test, and if, during such [23114] (page 2) previous thirty (30) days one or more prior tests of such meter shall have been made under the provisions hereof, then no such correction shall extend back beyond the date of the last of such prior tests. If any test of any meter shall be made at the request of Electric Companies or Philadelphia Company with the result that such meter shall be found to register correctly or within two per cent. (2%) of normal, the party requesting such test shall bear the expense thereof. From time to time, if requested by Electric Companies or Philadelphia Company, a duplicate meter shall be installed temporarily in the circuit with any of such meters for the purpose of comparison with the permanent meters. The expense of all other tests shall be borne by Railroad Company. All meters shall be kept under seal.

SECTION 2. It is agreed between the parties hereto that under normal operating conditions parallel operation shall be regularly and constantly maintained. Whenever an emergency exists or, in the judgment of any party, its operating situation renders such action necessary, the systems shall be separated at Perryville and/or Thorndale, but the systems shall not be separated at both Perryville and Thorndale during the hour of greatest "draught of Railroad Company in Philadelphia Company area" except on Sundays or when an abnormal condition exists. Each party hereto shall be the judge of the existence of such emergency or such abnormal condition in its own system. Such parallel operation shall be re-established as soon as possible after normal conditions are re-established.

SECTION 3. The parties hereto shall cooperate to secure flexibility of power supply and the best utilization of the single-phase generating capacity available in the systems of Philadelphia Company and Electric Companies consistent with adequate protection to the service in the systems of each party. The load dispatching organizations of the

parties hereto shall cooperate and keep each other fully informed, in order to accomplish the purposes of this agreement.

SECTION 4. Philadelphia Company and Electric Companies may, within the limits of the available capacity of the transmission lines and appurtenant equipment of Railroad Company, shift the load between the sources of supply to Railroad Company as they may from time to time determine, provided that Railroad Company's service or system is not adversely affected thereby. Railroad Company will in emergencies endeavor to have all its transmission facilities available for such purpose upon reasonable notice by the load dispatchers of the other parties. Railroad Company's load dispatching organization shall have final jurisdiction over its power system and is to be kept fully informed at all times of such shifting of load and other conditions affecting the supply of power to Railroad Company.

SECTION 5. If during any month such shifting of loads results in an actual net energy flow north at Perryville and east at Thorndale in excess of 12,000,000 kilowatt hours for the month or 40,000 kilowatt hours in any hour (including "peak transfer energy", if any), or an actual net energy flow south at Perryville and west at Thorndale in excess of the difference between 9,000,000 kilowatt hours for the month or 30,000 kilowatt hours in any hour, and such amounts, if any, as Electric Companies may at the time be obligated to supply as "peak transfer energy," Railroad Company may call for an adjustment in the amounts of energy actually accounted for during any such period due to the excess net losses occasioned by such load shifting. When requested, such adjustment shall be mutually determined and the demand and energy values so affected thereby shall be revised accordingly.

SECTION 6. The following terms shall have the meaning specified in this Section wherever used in this agreement:

(*a*) The term "draught of Railroad Company in Philadelphia Company area" for any period shall mean the algebraic sum of the readings of the watthour meters of Railroad Company at Perryville and Thorndale referred to in Section 1 hereof and at the points of supply specified in the 1927 Contract, energy flowing north at Perryville and east at Thorndale and flowing into the system of Railroad Company at said points of supply being deemed positive.

[23115] (page 3)

(*b*) The term "draught of Railroad Company on Electric Companies" for any period shall mean the load of Electric Companies' contractual supply as defined in Article II of the 1931 Contract, being the algebraic sum of the readings of the watthour meters of Railroad Company at Perryville and Thorndale referred to in Section 1 hereof and at the points of supply specified in the 1931 Contract, energy flowing south at Perryville and west at Thorndale and flowing into the system of Railroad Company at said points of supply being deemed positive.

(*c*) The term "draught of Railroad Company on Supplying Companies" for any period shall mean the sum of the "draught of Railroad Company in Philadelphia Company area," as defined in paragraph (*a*) above, and the "draught of Railroad Company on Electric Companies," as defined in paragraph (*b*) above, both for the same period.

(*d*) The term "peak transfer energy" shall mean the sum of the differences between the "draught of Railroad Company in Philadelphia Company area" and the "greatest combined draught" on Philadelphia Company, determined as provided in paragraph (*a*) of Section 7 hereof, for each even or clock hour during which such draught of Railroad Company in

Philadelphia Company area is in excess of such greatest combined draught.

(*e*) The term "waived peaks" shall mean those abnormal demands which are not used in computing maximum demand on Philadelphia Company under the provisions of Section 4 of Article I of the 1927 Contract or in computing the billing demand on Electric Companies under the provisions of Article VI of the 1931 Contract.

(*f*) The term "firm single-phase capacity" shall mean, in the case of Philadelphia Company, the total 25-cycle capacity installed for supplying Railroad Company's requirements at the points of supply specified in the 1927 Contract, less the capacity of the largest 25-cycle unit installed for such supply; and, in the case of Electric Companies, the total 25-cycle capacity installed for supplying Railroad Company's requirements at the points specified in the 1931 Contract, less the capacity of the largest 25-cycle unit installed for such supply. The total firm capacity of Supplying Companies shall mean the sum of these firm capacities.

SECTION 7. Philadelphia Company and Railroad Company agree that the 1927 Contract shall, so long as this agreement shall remain in effect and no longer, be modified as follows:

(*a*) The "greatest combined draught" which will be used in computing the monthly maximum demand under Section 2 of Article I of the 1927 Contract shall be determined daily, as follows:

(*i*) On days other than Sundays such "greatest combined draught" shall be the lower of the two amounts determined in accordance with subparagraphs (*ii*) and (*iii*) hereof; provided, however, that the determination shown

in subparagraph (*iii*) shall not be operative until the amount determined in accordance with subparagraph (*ii*) below on any day during the term hereof shall exceed 125,000 kilowatt hours.

(*ii*) The even or clock hour of greatest draught of Railroad Company on Supplying Companies shall be selected for each day and from such draught shall be subtracted the greatest draught of Railroad Company on Electric Companies occurring during any even or clock hour on the same day; provided, however, that if the resultant peak transfer energy for the day thereby obtained exceeds the obligations of Electric Companies therefor, as provided in Section 8 (*a*) hereof, then such lesser amount will be subtracted as will bring such resultant peak transfer energy within the limits of such obligations. The amount resulting from such subtraction shall be the amount referred to in subparagraph (*i*) above.

[23116] (page 4)

(*iii*) There shall be deducted from the "draught of Railroad Company in Philadelphia Company area" for the day an amount of energy totaling 20,000 kilowatt hours applied to one or more even or clock hours during the day in such a manner that the resulting remainders for such hours are equal and each is greater than such draught in any other even or clock hour of the day. Any such remainder, or 125,000 kilowatt hours, whichever is greater, shall be the amount referred to in subparagraph (*i*) above.

(*iv*) So long as Sundays continue to be light load days in the Philadelphia area the "greatest combined draught" on Sundays shall be the "draught of Railroad Company in Philadelphia Company area" as defined in Section 6(*a*) hereof. Should load conditions so change that Sundays become relatively heavy load days and effective in determining the maximum demand for the month, paragraphs (*i*), (*ii*) and (*iii*) hereof shall apply and include Sundays in determining the "greatest combined draught."

(*b*) The amount of energy used by Railroad Company for each month, to which the rate specified in Section 2 of Article II of the 1927 Contract shall be applied, unless for any month the guaranteed amount shall be greater, shall be the draught of Railroad Company in Philadelphia Company area for the month less peak transfer energy for such month.

(*c*) The guaranteed demand referred to in Section 3 of Article I of the 1927 Contract shall be seventy-five per cent. (75%) of the greatest previous difference between

(1) the average combined draught of Railroad Company on Supplying Companies, exclusive of waived peaks, during the three hours of such greatest combined draught occurring on different days other than Sundays in any month

and

(2) the average draught of Railroad Company on Electric Companies, exclusive of waived peaks, during the three hours of greatest draught of Railroad Company on Electric Companies occurring on different days other than Sundays in the same month;

provided, that should the maximum demand for any month determined from "greatest combined draught" as herein defined be less than the difference between (1) and (2) of this paragraph, then the maximum demand for that month shall be used instead of the said difference; and provided, further, that such guaranteed demand shall not be less than the guaranteed demand established prior to the effective date hereof in accordance with the provisions of said Section 3 of Article I of the 1927 Contract.

(*d*) For the purpose of determining power factor under the provisions of the last paragraph of Section 1 of Article II of the 1927 Contract, the readings of the meters at the points specified in paragraph (*a*) of Section 6 hereof shall be used in lieu of the readings of the meters at the points specified in the 1927 Contract.

(*e*) Railroad Company will not require additional 25-cycle, single-phase capacity to be installed by Philadelphia Company until the greatest combined single-phase draught of Railroad Company on Philadelphia Company (exclusive of any hour in which a peak waived by Philadelphia Company occurs) in any one even or clock hour exceeds the total firm single-phase capacity of Philadelphia Company by more than 15,000 kilowatts; provided, that the combined single-phase draught of Railroad Company on Supplying Companies for any even or clock hour (exclusive of any hour in which a waived peak occurs) is not greater than the total firm single-phase capacity of Supplying Companies.

SECTION 8. Railroad Company and Electric Companies agree that during the term of this agreement:

(*a*) Electric Companies shall provide the peak transfer energy as defined herein, in excess of their contractual supply, within the present terms and con-

ditions of Article X of the 1931 Contract, both as to the amounts of hourly draught and of daily energy. Such energy shall be furnished each day other than Sunday during periods of parallel operation.

[23117] (page 5)

(*b*) The surcharge provided in Article X of the 1931 Contract shall be applicable to and only to the amount of peak transfer energy, whether such energy is supplied by Electric Companies or by Philadelphia Company.

(*c*) Electric Companies will not require Railroad Company to call for additional single-phase capacity to be installed by Electric Companies until the draught of Railroad Company on Electric Companies for any one even or clock hour (exclusive of any hour in which a peak waived by Electric Companies occurs) minus 12,500 kilowatt hours, is equal to or greater than Electric Companies' firm single-phase capacity; provided, that the total firm single-phase capacity of Supplying Companies is greater than the highest combined single-phase draught of Railroad Company on Supplying Companies for any one even or clock hour (exclusive of any hour in which a waived peak occurs). If, however, such highest combined single-phase draught (exclusive of any hour in which a waived peak occurs) is greater than such total firm single-phase capacity, Railroad Company shall call for additional single-phase capacity to be installed by Electric Companies in the event that the highest draught of Railroad Company on Electric Companies; exclusive of the Thorndale-Parkesburg area, for any one even or clock hour (exclusive of any hour in which a peak waived by Electric Companies occurs) is in excess of Electric Companies' then firm single-phase capacity.

SECTION 9. As of the date of this agreement, the firm single-phase capacity of Philadelphia Company, including

the capacity at Somerset Substation to be presently made available for single-phase operation by the installation of a transmission circuit to Richmond Substation, is 134,350 kilowatts, the firm single-phase capacity of Electric Companies is 50,000 kilowatts, and the total firm single-phase capacity of Supplying Companies is 184,350 kilowatts.

If and when Railroad Company decides to discontinue the use of three-phase supply from Somerset Substation, the value of firm single-phase capacity of Philadelphia Company shall then be increased by 6,000 kilowatts.

SECTION 10. It is the intent of this agreement that Electric Companies shall supply the amount of daily peak transfer energy actually accounted for by Philadelphia Company and by Electric Companies to Railroad Company insofar as it can be predetermined by the load dispatching organizations of Supplying Companies, but the accounting for such energy shall be as herein determined, irrespective of whether the said dispatching organizations of Supplying Companies arranged for such distribution or whether for various reasons other arrangements were specifically made.

SECTION 11. This agreement and an agreement of even date herewith between Philadelphia Company and Pennsylvania Water & Power Company, two of the parties hereto, are interdependent and intended to become effective simultaneously, and it is agreed that this agreement shall not take effect until all legal prerequisites, if any, as to said agreements have been consummated. The parties hereto shall cooperate in conforming to such prerequisites. This agreement shall continue in full force and effect only so long as both the 1927 Contract and the 1931 Contract are in full force and effect; provided, however, that any party hereto may terminate this agreement after March 1, 1943, by giving the other parties at least one (1) year's prior written notice of such termination. For such purposes, notice given by or to any one of Consolidated Gas Electric Light and Power Company of Baltimore, Pennsylvania

Water & Power Company or Safe Harbor Water Power Corporation, herein referred to as "Electric Companies," shall be deemed adequate notice by or to all said Electric Companies.

SECTION 12. Railroad Company agrees to make available such circuits or channels for communication, telemetering, supervisory control or other purposes, as may be agreed upon between the parties hereto from time to time.

[23118] (page 6)

SECTION 13. Except as specifically provided herein, the 1927 Contract and the 1931 Contract shall be and remain in full force and effect.

SECTION 14. It is further understood and agreed that neither Philadelphia Company nor Electric Companies shall be in any way liable to Railroad Company for loss or damage because of any matter or thing arising in connection with performance hereunder, which is not directly attributable to the neglect or failure of the party against which the obligation is asserted.

SECTION 15. This agreement shall bind and enure to the benefit of the parties hereto and their respective successors and assigns, but shall not be assigned by any party hereto without the prior written consent of the others.

IN WITNESS WHEREOF the parties hereto have caused this agreement to be executed by their respective officers thereunto duly authorized and their respective corporate seals to be hereunto affixed and attested, as of the day and year first above written.

EXHIBIT No. 136.

[23120] (page 1)

WHEREAS, an agreement was entered into on the ninth day of October, 1912, by and between the Pennsylvania Water and Power Company, a corporation organized and existing under the laws of the State of Pennsylvania, and referred to in said agreement as the "Generating Company", and the party of the first part, and the Edison Electric Company, a corporation organized and existing under the laws of the State of Pennsylvania, and referred to in said agreement as the "Receiving Company", and the party of the second part;

AND WHEREAS, by the terms of said agreement the said Pennsylvania Water and Power Company, the Generating Company, was to sell and supply electric energy to the Edison Electric Company, the Receiving Company, in accordance with the terms and conditions set forth in said contract, a copy of which contract is hereto attached and made a part of this agreement;

AND WHEREAS, by the terms of said contract it existed for and during the term of ten years from the first day of May, 1913, with the privilege of a renewal for a further period of ten years, upon rates to be agreed upon between the parties to said contract;

AND WHEREAS, the parties to said contract have agreed that the same shall be renewed for the further period of ten years from the first day of May, 1923, upon the terms and conditions hereinafter set forth:

NOW, THIS AGREEMENT, made and concluded this 19th day of October, 1923, by and between the PENNSYLVANIA WATER & POWER COMPANY, a corporation organized and existing under the laws of the State of Pennsylvania, hereinafter called the "Generating Company", party of the first part, and the EDISON ELECTRIC COMPANY, a corporation

organized and existing under the laws of the State of Pennsylvania, hereinafter called the "Receiving [23121] (page 2) Company", party of the second part,

WITNESSETH

1. *Term of Contract*

It is hereby agreed between the parties to this agreement that the said contract bearing date the 9th day of October, 1912, the term of which contract expired on the first day of May, 1923, is hereby extended for a further period of ten years from the first day of May, 1923, upon the following terms and conditions:

2. *Price*

That the electric energy rates and provisions referred to herein are to go into effect as of May 1, 1923.

That for all energy supplied by Generating Company for use or conversion by Receiving Company and measured as provided in Article V of the agreement of October 9, 1912, Generating Company shall bill Receiving Company at the rate of six and seventy-five hundredths (6.75) mills per K.W.H. for the first nine million (9,000,000) K.W.H. per month and at the rate of nine (9) mills per K.W.H. for the energy above nine million (9,000,000) K.W.H. per month.

After December 31, 1924, the energy losses for frequency conversion done by Receiving Company at request of Generating Company in accordance with Paragraph 3 hereunder shall be billed as four hundred and ten thousand (410,000) K.W.H. per month, notwithstanding that the actual losses may be greater or less than such amount and of such four hundred and ten thousand (410,000) K.W.H per month, the Generating Company shall credit Receiving Company with two hundred and five thousand (205,000) K.W.H. per month at six and seventy-five hundredths (6.75) mills per K.W.H.

[23122] (page 3)

3. *Mixed Frequency Supply*

That Generating Company shall supply energy to Receiving Company at both 25 and 60 cycles, and Receiving Company, at no cost to Generating Company, shall maintain its existing frequency changing equipment and operate same, up to its present capacity, for conversion of 25 cycles to 60 cycles, or vice versa, to the extent that it is practicable to do so, when and as requested by Generating Company. Both Generating Company and Receiving Company shall use due diligence in providing equipment and making such changes as may be necessary for the furnishing and taking of 60 cycle energy delivered at the power house of Generating Company, it being agreed that such delivery of 60 cycle energy shall commence not later than December 31, 1924.

4. *Fuel Cost Adjustment*

That the charges for energy stated above shall be modified by a fuel cost adjustment when and only when the average cost of boiler coal used during the month by the Consolidated Gas Electric Light & Power Company of Baltimore as reported by said Company to the Public Service Commission of Maryland, or, in default of such report, as determined in the manner required by the Classification of Accounts of the Public Service Commission of Maryland, is in excess of Seven Dollars ($7.00) or below Four Dollars ($4.00) per long ton. The fuel cost adjustment shall then consist of a charge or credit at the rate of five-tenth (0.5) mills per K.W.H. per dollar increase above $7.00, or decrease below $4.00 in such cost of boiler coal per long ton.

5. *Amount of Power and Energy*

That Receiving Company shall take from and pay for to Generating Company, and Generating Company shall supply and bill [23123] (page 4) Receiving Company for, all of Receiving Company's energy requirements (except

the supply from the Conestoga Creek plants and except a maximum of five million (5,000,000) K.W.H. per year of energy generated by steam at Engleside as hereinafter specified) up to the fifty thousand (50,000) K.W. load line, as shown by the fifteen (15) minute integrated peak, but in no event shall Generating Company be obligated to supply a power draft in excess of said fifty thousand (50,000) K.W., as shown by the fifteen (15) minute integrated peak aforesaid.

6. *Steam Generation at Engleside*

That Receiving Company shall maintain its Engleside steam station and therewith shall generate by steam as requested by Generating Company to an extent not in excess of the available capacity of such station, which in no event shall be less than 2500 K.W. The generation of five million (5,000,000) K.W.H. per year, or any part thereof by steam provided for in Article II of the 1912 Agreement shall hereafter be at the option of Generating Company and the cost thereof shall be borne by Receiving Company and such energy so generated by steam shall not be billed for by Generating Company. All generation by steam at Engleside as requested by Generating Company in excess of five million (5,000,000) K.W.H. per year below the fifty thousand (50,000) K.W. load line shall be for Generating Company's use and shall be paid for by Generating Company at the actual additional cost above standby expense incurred by Receiving Company for fuel, operating materials and operating labor required for such generation, plus a fee of twenty-five per cent (25%) as allowed to Receiving Company to cover profit and additional overhead and maintenance expense assumed to be incurred in connection with such generation.

7. *Conestoga Creek Plants*

Receiving Company's right to draw seven hundred and [23124] (page 5) fifty (750) K.W. for eighteen hours per

day from the Conestoga Creek plants of the Lancaster Light, Heat & Power Company is extended to 1500 K.W. for twenty-four hours per day, except that in times of low flow when these plants operate during less than twelve hours per day, the hours of operation are to fall into the hours of heavy load on Receiving Company's system, so far as is compatible with automatic operation of said plants.

8. *Use of Energy*

That no energy supplied by Generating Company to Receiving Company under this agreement shall directly or indirectly be used for electrification of railroads; nor be used in York County; nor be used in Chester County, except in the territories in which it is now being sold by Receiving Company in West Sadsbury Township, and by Oxford Electric Company, and by Tri-County Electric Company, and to supply the requirements of the present trolley system of the Conestoga Traction Company operating in Chester County; nor be used except under substantially the present conditions of seasonal variation in load.

9. *Transmission Lines and Transmission Charges*

That the sixty (60) cycle supply from the Holtwood power house of the Generating Company shall be delivered at the low tension terminals of step-down transformers at a point near the existing Engleside station from an outdoor 60 cycle transformer station and a transmission line, the voltage of which shall be sixty-six thousand (66,000) volts or higher, to be built, operated and maintained by Generating Company, and to be ready for service not later than December 31, 1924. For providing such service Receiving Company shall pay Generating Company an additional charge of one (1) mill per K.W.H. for all energy supplied in excess of nine million (9,000,000) K.W.H. per month, beginning when the new 60 cycle equipment provided for herein is ready for service.

Generating Company shall then be allowed to utilize [23125] (page 6) the spare capacity of Receiving Company's existing 25 cycle transmission line between Holtwood and Engleside for the delivery of twenty-five (25) cycle energy to transmission lines for conducting such energy outside of Lancaster County; it being provided, however, that such 25 cycle energy shall not directly or indirectly be used in or sold for use in Lancaster County except with written consent of Receiving Company. For and during such use of Receiving Company's transmission line, Generating Company shall pay Receiving Company one (1) mill per K.W.H. of energy transmitted over such line for Generating Company.

That Receiving Company shall have the option at any time after five years from April 30, 1923, upon two years prior notification in writing to Generating Company, to purchase the said sixty (60) cycle line and step-down station, upon payment to Generating Company of their reproduction cost, which shall be a sum sufficient to replace the 60 cycle line and equipment complete, with right of way, and tested and ready for operation as of the date of sale; provided, however, that there shall be deducted from such sum the accumulated depreciation actually charged off by Generating Company against the line and equipment. These depreciation rates on the transmission line and equipment shall be substantially the same as are charged by Generating Company against its other similar transmission lines and equipment.

That in the event of Receiving Company exercising its option as above, Generating Company shall be permitted to utilize the spare capacity of said sixty (60) cycle transmission line between Holtwood and Engleside for the delivery of sixty (60) cycle energy to transmission lines for conducting such energy outside of Lancaster County; it being provided, however, that such 60 cycle energy shall not directly or indirectly be used in or sold for use in Lancaster County, except with written consent [23126] (page 7) of

Receiving Company. For and during such use of Receiving Company's 60 cycle transmission line, Generating Company shall pay Receiving Company one (1) mill per K.W.H. for energy transmitted for it over such line.

10. All the other covenants and terms of the 1912 agreement not inconsistent with the foregoing provisions and conditions shall continue in effect; and the rates as fixed herein shall have the same binding force and effect as if they had been fixed or readjusted in accordance with Article IX of the agreement of October 9, 1912, and the rates specified herein are to be considered as continuing rates specifically arranged for in said agreement and not new rates.

In Witness Whereof, the parties hereto have caused this agreement to be executed by their proper officers thereunto duly authorized and their respective corporate seals to be hereunto affixed the day and year first above written.

[23127]

COPY OF CONTRACT DATED OCTOBER 9, 1912, BETWEEN COMPANY AND EDISON ELECTRIC COMPANY

[23128] (page 1)

THIS AGREEMENT, made this ninth day of October, 1912, by and between the PENNSYLVANIA WATER & POWER COMPANY, a corporation organized and existing under the laws of the State of Pennsylvania, hereinafter called the Generating Company, party of the first part, and the Edison Electric Company, a corporation organized and existing under the laws of the State of Pennsylvania, hereinafter called the Receiving Company, party of the second part;

WITNESSETH, whereas the Generating Company is engaged in the business of generating electric power, and, whereas, the Receiving Company is in the business of transmitting and distributing electric energy, and, desires to purchase said electric energy for transmission and distribution;

NOW THEREFORE, the parties hereto, in consideration of the premises and of One Dollar ($1.00) and other valuable considerations, each to the other in hand paid, receipt of which is hereby mutually acknowledged and the covenants hereinafter set forth, mutually agree as follows:

ARTICLE I

TERM OF CONTRACT: For and during the term of ten (10) years, commencing on the first day of May 1913, and during any extended life of this contract effected under the provisions hereinafter set forth, the Generating Company agrees to sell and supply electric energy to the Receiving Company, and the Receiving Company agrees to take and pay for the same in such quantities and in such manner as herein provided, and, under the terms and conditions herein set forth.

Such electric energy available during the twenty-four hours of each day of the year, will be in the form of three phase, alternating current, at a frequency of approximately 25 cycles per second and at a voltage of approximately 66,000 volts, as hereinafter provided and hereinafter referred to as "energy".

PRIOR DELIVERY: It is understood, however, that should the Generating Company and the Receiving Company be ready to supply and take before the above date, that the energy will be supplied and taken and paid for under the terms and conditions provided for herein.

ARTICLE II

AMOUNT OF ENERGY TO BE SUPPLIED: The Generating Company agrees to supply and the Receiving Company agrees to take and pay for, under the terms and provisions hereinafter mentioned, all of the electrical energy required by it during the life of this contract, except the current which the Receiving Company is obligated to take under the contract existing with the Lancaster Electric Light, Heat and Power Company, dated February 8, 1902, which calls for a maximum amount of energy which they can supply of seven hundred and fifty (750) K.W. for eighteen hours a day. [23129] (page 2) And the Receiving Company shall have the right, at its option, to generate by steam at its Engleside Station during any one year energy to an amount not exceeding five million (5,000,000) K.W. hours.

ARTICLE III

PRICE AND PAYMENTS: The Receiving Company agrees to pay for all energy actually supplied under this contract, at the rate of 5 mills per kilowatt hour under the terms and conditions provided for herein.

TIME OF PAYMENTS: The Generating Company shall bill for on or before the 5th day of each month, and the Receiv-

ing Company agrees to pay on or before the 15th day of each month for all energy taken during the preceding month.

POWER RENTAL IN DISPUTE: All claims or counterclaims which the Receiving Company may have or claim to have against the Generating Company, arising out of this contract, shall be presented to the Generating Company in writing during the first fifteen days of the following month.

In case of a dispute between the parties hereto as to the proper amount of any bill for energy delivered, the Receiving Company shall pay the Generating Company the amount of the bill as admitted by it (the Receiving Company) to be correct, and deposit the amount in dispute in some Trust Company in Lancaster accompanied by an authority to pay out such deposit or such part thereof as may be directed by arbitration as provided for in Article VIII hereof, or by order of the Court.

FAILURE TO PAY RENTAL: In case of failure on the part of the Receiving Company to pay the rental for energy as herein provided for, the Generating Company shall have the right, upon sixty days' written notice to discontinue the delivery of power until such payments have been made in full; and, should such delinquency continue for a period of six months after due date, the Generating Company may cancel the contract, without prejudice to any right of action hereunder.

ARTICLE IV

EQUIPMENT AND CHARACTER OF SERVICE OF GENERATING COMPANY: The energy to be furnished by the Generating Company under this agreement shall be delivered to the Receiving Company upon the Receiving Company's high tension transmission line at a point just outside of the step-up transformer station of the Generating Company at Holtwood, Pennsylvania.

The Generating Company agrees to install and maintain all of its apparatus, which in any way affects the

delivery of power to the Receiving Company, in first class condition and in accordance with good engineering practice, and agrees to exercise due care in the operation of its system to give as nearly as practicable continuous service.

The Generating Company agrees to maintain, at the point of delivery to the Receiving Company, the voltage and frequency of the supply at approximately 66,000 volts and approximately 25 cycles, respectively, [23130] (page 3) at all times during which the energy taken by the Receiving Company does not exceed the maximum load to which the Receiving Company is at that time entitled.

The Generating Company agrees that the fluctuation of frequency and voltage shall not be such as to prevent the proper and effective operation of the transforming, converting and controlling apparatus owned by and connected with the circuits of the Receiving Company.

RECEIVING COMPANY'S EQUIPMENT AND USE OF POWER: For the purpose of utilizing the electric energy furnished by the Generating Company, the Receiving Company agrees to install and maintain all of its apparatus and distribution lines, which in any way affect the taking of power from the Generating Company, in first class condition, and, in accordance with good engineering practice.

The said apparatus of the Receiving Company shall be of such character and so operated as to maintain a practically balanced load between phases, and to draw current from the Generating Company at as near as possible to unity power factor, and, at not less than eighty-five per cent (85%) power factor, except at times of load less than two thousand (2,000) Kilowatts, or, unless necessary for regulation purposes. The excess volt amperes taken at times when the average power factor of the three phases, during any day, is less than eighty-five per cent (85%), shall be considered and paid for as energy, unless such low power factor shall have been caused by improper voltage or frequency delivered by the Generating Company.

The Receiving Company shall use all energy contracted for herein in a manner that will not cause undue disturbance to the Generating Company's system or abnormal fluctuations in the demands for energy.

BREAKDOWN OF APPARATUS: Each party hereto agrees that in case of the breakdown or becoming defective of any of its apparatus, which in any way affects the supplying or taking of energy under this contract, it will immediately use due diligence to repair or replace its said apparatus and operate the same so as not to interfere with the supplying of energy or the taking of energy for a longer period than is absolutely necessary.

To insure against long continued interruptions in the supplying of energy by the Generating Company or the taking of energy by the Receiving Company, each Company shall keep in reserve sufficient apparatus to take care of the breakdown of any single piece of its apparatus affecting the supplying or taking of energy under this contract.

Neither party shall assume any liability or be held responsible for any damages which may occur to the whole or any part of the apparatus or lines of the other party, nor for damage to life or property caused by the lines or apparatus of the other party, except for such damages as may be due to the negligence of the other party or its employees.

[23131] (page 4)

ARTICLE V

MEASUREMENT: All electric energy to be supplied hereunder shall be measured by watt-hour meters, to be installed on low tension side of transformers by the Generating Company at its expense, at the Engleside Sub-station, at Lancaster, Pa. The Generating Company may also install graphic meters to check the peak load measurements. Such watt-hour meters, or other meters, shall be of an approved type and shall be so connected as to show the energy delivered to the Receiving Company, the point of

measurement of energy being the terminals of the Receiving Company's step-down transformers at the Engleside Sub-station, at Lancaster, Pa., and, allowance is to be made, as agreed upon between the two companies, for discrepancies in measurement introduced by the current and potential transformer layout.

The Receiving Company shall have the right to install its own check meters in addition to the meters installed by the Generating Company and space and structure for the said check meters shall be provided by the Receiving Company in its step-down transformer station, and, if called upon by the Receiving Company to do so, the Generating Company agrees to install a complete duplicate watt-meter outfit for the purpose of avoiding errors or disputes, and, so long as the two meters, or either of them are not found to be inaccurate, the readings of the two shall be averaged.

Said meters installed by the Generating Company shall be read at midnight on the last day of each calendar month for the purpose of ascertaining the kilowatt hours drawn and used during that month.

The meters shall be tested and calibrated at suitable intervals or upon written request of either party in the presence of duly appointed representatives of both parties, and, if, as the result of such test, any meter shall be found incorrect or inaccurate, it shall be restored promptly to an accurate condition, or a new meter shall be substituted.

The readings of any meter tested and found to be not more than two per cent (2%) from accuracy, at all ranges within the limits between which it is in use, shall be considered correct and accurate. If, as the result of any such tests, any meter shall be found to register in excess of two per cent (2%) either above or below accuracy, then the consumption recorded by such meter since the last monthly reading previous to the request for test, shall be corrected accordingly by one-half (½) of the percentage of the inaccuracy so found, provided that this percentage is less than ten per cent (10%), but no correction shall extend back

beyond thirty (30) days previous to the day on which such tests are requested, and if during such previous thirty (30) days one or more prior tests shall have been made under the provisions hereof, then no correction shall extend back beyond the date of such prior tests. Should the error in the meter exceed ten per cent (10%) the probable consumption shall be estimated and paid for as agreed upon between the parties hereto.

[23132] (page 5)

ARTICLE VI

PERMISSION TO MAKE REPAIRS: In order to make necessary repairs or changes on its system, either party shall have the right to temporarily discontinue the service at such time or times as may be least inconvenient to the other party. Except in cases of extreme emergency, at least twelve (12) hours' notice shall be given by the party desirous of making the repairs to the other party, that such discontinuance of the service is to take place.

SUSPENSION CAUSED BY FIRE, STRIKES, ETC.: If at any time during the continuance of this contract, the Generating Company shall be prevented from supplying, or, the Receiving Company shall be prevented from taking all or any part of the energy herein contracted for, by reason of war, rebellion, civil disturbance, strikes, serious epidemics, fire, lightning, or any other cause of a like nature beyond the control of either party, the obligation of the Generating Company to supply and the obligation of the Receiving Company to take energy contracted for hereunder, shall cease until such time when the party so incapacitated shall, by the exercise of reasonable diligence, be able to resume such supply or use.

DEFICIENCY DUE TO LOW WATER: Deficiency in the supply of power caused by conditions of low water at the Generating Company's dam shall not be considered as a cause excusing supply hereunder.

ARTICLE VII

FEEDERS: The automatic circuit breakers on the outgoing feeders to the Receiving Company in the Generating Company's step-up transformer Station shall be set for at least fifty per cent (50%) in excess of the normal maximum load to which the Receiving Company is at the time entitled, and each feeder shall be of a capacity of approximately 10,000 K.V.A. normal rating, and there shall be two feeders, one for each of the Receiving Company's transmission circuits.

RECEIVING COMPANY'S TRANSMISSION SYSTEM: It is understood that the Receiving Company's transmission line will run in as direct a route from Holtwood to Engleside as is practicable, and that each of the six transmission line conductors shall have conductivity of not less than the equivalent of 90,000 C.M. copper.

ARTICLE VIII

ARBITRATION: In the event of a difference of opinion on any question as to quantity, quality, kind, confirmity with technical standards, value or cost of any energy, property, matter or thing furnished, used, performed or done, or omitted to be furnished, used, performed or done in connection with this contract, the respective parties mutually agree that any and all such questions be submitted to a Board of Arbitration consisting of three members, one to be appointed by the Generating Company, one by the [23133] (page 6) Receiving Company, and the third chosen by these two. In the event of either party failing to appoint an arbitrator within thirty (30) days after written request from the other party, or in the event of a failure of the said two arbitrators to appoint a third, the said arbitrator or arbitrators shall be appointed by the person then occupying the position of President Judge of the Court of Common Pleas of Lancaster County, Pennsylvania.

The expense of the Board of Arbitration shall be shared equally by the parties hereto, except when the dispute shall relate solely to differences in accounts, in which case said expense shall be shared in inverse proportion to the award, by the Arbitrators, or by the Court, to either party.

The decision of any two of the Arbitrators shall be final and binding upon the parties hereto. Such submission to and decision by said Board of any and all questions as to any of the matters aforesaid, is hereby declared to be a condition precedent to the bringing of any action or legal proceedings by either party hereto on account of any matter or thing involving any such question.

ARTICLE IX

RENEWAL OF CONTRACT: This contract shall automatically renew itself for a further period of ten (10) years duration, at the option of the Receiving Company, provided a readjustment of rate for power to be determined by arbitration is made if insisted upon by either party, such readjustment based upon any increase in the cost of steam generated power which might then exist as compared with the cost of steam generated power as of date of this contract.

The provisions herein contained shall extend to and bind the parties hereto and their successors and assigns respectively.

IN WITNESS WHEREOF: the parties hereto have caused this agreement to be executed by their proper officers thereunto duly authorized and their respective corporate seals to be hereunto affixed the day and year first above written.

EXHIBIT No. 141.

[23190] (page 1)

Excerpts from the Direct Testimony of George W. Spaulding in Safe Harbor Water Power Corporation, Docket No. IT-5914, beginning at Transcript 155, Line 9, and Ending on Transcript 158, Line 13.

By Mr. Arthur Hull:

Q. Mr. Spaulding, I show you a paper marked for identification as Exhibit No. 10, and ask you if this exhibit was prepared under your direction.

A. It was.

Q. Will you explain what this exhibit shows?

A. This exhibit shows a comparative statement of operating revenues, the revenue from energy sales by the company, the amount of annual kilowatthour sales by the company and the resultant rates received per kilowatthour sold for the calendar years 1939 to 1943, inclusive.

Item 1 is the total operating revenue received under the contract and item 2 is the rent received by the company from electric properties.

Item 3 is the revenue received from energy sales, as per the books of the company, while item 4 is adjustments made in subsequent years to the annual revenues through surplus accounts. Item 5 is the revenue from energy sales after such adjustments.

Items 6 and 7 show the amounts billed to and revenues received from the Consolidated Gas Electric Light and Power Company of Baltimore and the Pennsylvania Water and Power Company, after adjustments made through surplus accounts as shown above. Item 8 is the sum of items 6 and 7, being the same as item 5.

Items 9 and 10 show the amounts of energy reported to have been delivered by the Safe Harbor Company to its two customers in the annual reports filed with the Federal Power Commission and the Public Utility Commission of Pennsylvania. The energy sales to Baltimore Company in item 9 are equal to two-thirds of the energy generated at the Safe Harbor project as measured at the low tension terminals of the stepup transformers, less the transmission losses between the Safe Harbor plant and the points of delivery at Westport, Riverside and Takoma Park, Maryland, while the energy sales to Pennsylvania Water and Power Company are equal to one-third of the energy generated at the Safe Harbor project as measured at the low tension terminals of the stepup transformers.

Item 11 is the sum of items 9 and 10.

Items 12 and 13 are the revenues received per kilowatthour from each of the company's customers, while item 14 is the average revenue per kilowatthour based on actual sales.

[23191] (page 2)

It is desired to call attention to a note which has appeared on the respective annual reports filed with the Federal Power Commission which reads as follows, and I quote:

"Respondent sells its entire output, under a long-term contract, to Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water and Power Company. The charges are independent of the amount of energy delivered and do not include any transmission costs. The cost of operating the transmission facilities for transmitting power and energy to Consolidated Gas Electric Light and Power Company of Baltimore in Baltimore and Takoma Park, Maryland, is billed to Consolidated Gas Electric Light and Power Company by Pennsylvania Water and Power Company".

As the charges are independent of the amount of energy delivered, the rates per kilowatthour sold will fluctuate from year to year with variations in usable river flow as will be noted in item 14. To eliminate the effect of variation in flow, the rates per kilowatthour which the company would have received with average river flow in each year are shown in item 15.

Q. Do these two customers of the Safe Harbor Company receive the specific energy shown in items 9 and 10 of this exhibit?

A. Not necessarily. Mr. Walls has testified that it is impossible to tag the energy transmitted from either one of the hydro plants. The total Safe Harbor energy goes into the regional power pool which is fed not only from Safe Harbor but from the Holtwood hydro and steam stations, the Baltimore steam generating stations and the Washington steam generating stations. Reports made to the respective regulatory commissions of energy sold, are in accord with the directions of these commissions.

The combined total of energy sold by Safe Harbor is correct, but the division of energy sales between its customers is not necessarily in accord with the statements given to the several commissions, a fact of which their respective staffs have been continually advised.

Cary T. Hutchinson, Esq.,
60 Wall Street,
New York, City.

Dear Sir:

We have furnished to Messrs. Harvey Fisk & Sons the list which you sent us for the distribution of your part of the common stock of McCall Ferry Power Company, and their Stock Deposit Receipts will be re ready for issue in exchange for the Stock Deposit Agreements when turned into them.

Inasmuch as it was stated at the time this stock was left with Messrs. Harvey Fisk & Sons that 48850 shares thereof were held by them for safe keeping for you, they will doubtless like to have a letter from you when you receive your Stock Deposit Receipts terminating their responsibility in the premises. We enclose a suggestion for the form of this letter.

Yours very truly,

Enclosure.

Henry M. Higginson, Esq.,
Messrs. Lee, Higginson & Co.,
44 State Street, Boston, Mass.

My dear Mr. Higginson:—

I am in receipt of your of 16th instant, just as I am leaving my office for Bar Harbor, but I have time, I think to answer all you wish.

It is not necessary for me to say that I do this with great pleasure and you certainly do not need to make any effort to recall yourself to my memory. Like all people who have been favored with your acquaintance my memory of you is of the pleasantest.

In reference to your inquiries, I would say that we expect to be able to commence the delivery of power about June, 1908.

December 1, 1945

Mr. N. B. Higgins, President
Safe Harbor Water Power Corporation
Baltimore, Maryland

Dear Mr. Higgins:

Please find attached, an agreement between Metropolitan Edison Company and Pennsylvania Water & Power Company which will become effective December 31, 1945 and extend for a period of five years with provision for renewal. You will note that this contract will supersede and, therefore, provides for the termination of the existing four party York Power Supply Contract between Edison Light and Power Company, Metropolitan Edison Company, Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation, which expires March 31, 1946.

In as much as the present power supply contract of January 1, 1935, as supplemented in March 1945, to which Safe Harbor Water Power Corporation is a party, is to be terminated by the terms of this new agreement between Pennsylvania Water & Power Company and Metropolitan Edison Company, as of midnight December 31, 1945, and in accord with Section 2 of Article I of this new agreement, will you please advise this Company of Safe Harbor's consent to the termination of the existing four party agreement.

Yours very truly,

(s) G. W. Spaulding

IN THE MATTER OF THE RATES OF CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE	BEFORE THE PUBLIC SERVICE COMMISSION OF MARYLAND

The answer of Consolidated Gas Electric Light and Power Company of Baltimore (hereinafter called the Company) to the petition of Philip H. Dorsey, Jr., People's Counsel, and to other proceedings leading up to or following that petition, respectfully shows that:

* * *

[23288] (page 6)

(*b*) The Chief Auditor also contends that the Company's rates should be reduced by reducing "the amounts charged to operating expenses" for payments by the Company to Pennsylvania Water and Power Company (hereinafter called Pennsylvania Company) and Safe Harbor Water Power Corporation (hereinafter called Safe Harbor) for purchased electricity "to the extent that the earnings of these companies are exorbitant". For many years the Company has purchased electricity from Pennsylvania Company under successive contracts at rates which the Company has believed to be advantageous to it and to be less than the cost of producing the electricity or purchasing it elsewhere. The present contract, made in 1931 (and amended in 1939) was based on a number of factors, including Pennsylvania Company's revenue and expenses before the contract was made. The Company has no basis for asserting that Pennsylvania Company's earnings are unreasonable, much less "exorbitant". They are neither exorbitant nor unreasonable merely because they are [23289] (page 7) not based on so-called "original cost". The Company owns no stock or other interest in Pennsylvania Company and has no connection with the management of Pennsylvania Company. Aside from possible legal or jurisdic-

tional questions, if the Commission intends to give consideration to this contention of the Chief Auditor, it would seem appropriate to give Pennsylvania Company notice of the Commission's intention so that the facts may be presented first hand, and the Company and Pennsylvania Company may both participate in the proceedings in respect of their contract rates.

(c) The Company is the owner of two-thirds of the stock (including one-half of the voting stock), of Safe Harbor and, as such, guarantor of Safe Harbor's bonds; it is indemnified to the extent of one-third by Pennsylvania Company, the other stockholder. Safe Harbor's contract rate for power is not exorbitant or unreasonable.

[23296] (page 1)

BEFORE THE PUBLIC SERVICE COMMISSION OF THE COMMONWEALTH OF PENNSYLVANIA.

In Re: Application of the Safe Harbor Water Power Corporation for a Certificate of Public Convenience, evidencing the Commission's approval of the modification of the order of the Public Service Commission issued to the Safe Harbor Water Power Corporation on the 31st day of March, A.D. 1930.	Application Docket No..... 19.. Folder No...

To the Public Service Commission of the Commonwealth of Pennsylvania:

The petition of the Safe Harbor Water Power Corporation,

Respectfully Represents:

1. That the names and addresses of the officers of the Safe Harbor Water Power Corporation are:

Charles E. F. Clarke,	President,	40 Wall Street, New York, N. Y.
J. A. Walls,	Vice-President,	Lexington Bldg., Baltimore, Md.
Herbert A. Wagner,	Vice-President,	Lexington Bldg., Baltimore, Md.
James L. Rintoul,	Treasurer,	Lexington Bldg., Baltimore, Md.
F. J. Allen,	Secretary,	40 Wall Street, New York, N. Y.

[23297] (page 2)

2. That the name and address of your petitioner's attorney is

John E. Malone, 56 North Duke Street, Lancaster, Pa.

3. Your petitioner, Safe Harbor Water Power Corporation, is a corporation of the State of Pennsylvania formed by the merger of the Safe Harbor Water Power Corporation and Chanceford Water Power Corporation, for the purpose of the supply, storage or transportation of water and water power for commercial and manufacturing purposes in the Township of Manor, Lancaster County, Pa., and in the Township of Chanceford, York County, Pa., which merger was approved by your Honorable Commission on December 23, 1929, Application Docket No. A-21579, 1929.

Your petitioner, the Safe Harbor Water Power Corporation, was further authorized by your Honorable Commission to begin the exercise of its rights, powers or privileges, as evidenced by Certificate of Public Convenience dated March 31, 1930, Application Docket No. A-21579, 1930, Folder #2.

A statement of the amount of stocks and bonds authorized, issued and outstanding on the 31st day of December, A.D. 1931, is attached hereto and marked "Exhibit A".

4. That your petitioner, Safe Harbor Water Power Corporation is chartered to furnish service in Manor Township, Lancaster County, Pa., and in Chanceford Township, York County, Pa., and is now furnishing service in Manor Township, Lancaster [23298] (page 3) County, Pa., but is not furnishing service in Chanceford Township, York County, Pa. Your petitioner does not hold any franchise grants.

5. This application is made by your petitioner for the purpose of having the Public Service Commission modify its report and order of March 31, 1930, copy of which report

and order is hereto attached and marked "Exhibit B", as follows: By changing the second condition so that the same shall read as follows:

> SECOND: That the Safe Harbor Water Power Corporation shall not, without the approval of the Public Service Commission hereafter first obtained, sell or dispose of the electric energy or power to be generated at its plant at Safe Harbor, Lancaster County, Pennsylvania, to any customer other than: (1) Consolidated Gas Electric Light and Power Company of Baltimore, Maryland, (2) Pennsylvania Power & Light Company, (3) Pennsylvania Railroad Company, (4) Chester Valley Electric Company of Coatesville, Pennsylvania, (5) Edison Light and Power Company of York, Pennsylvania, (6) Metropolitan Edison Company, (7) Philadelphia Electric Company, and (8) Pennsylvania Water & Power Company of Holtwood, Pennsylvania, and to the latter Company only for resale to the other companies enumerated herein.

6. That no additional capital will be required by your petitioner in the near future for the purpose of financing [23299] (page 4) the matters and things involved in this petition, the corporation having already sold or contracted to sell bonds and stocks in amount shown by the balance sheet attached hereto and marked "Exhibit C", and estimated to be sufficient to meet initial requirements. If additional funds are needed, they will be obtained by short term borrowing until such time as additional permanent financing is effected by the sale of additional bonds and/or stock.

7. That no corporation, partnership or individual is now furnishing or has the corporate or franchise right to furnish service similar to that to be rendered by your petitioner in the territory covered by this application, and that no competitive condition will be created by said company, except

(a) Pennsylvania Power & Light Company, successor to The Farmers Electric Company of Manor Township and Edison Electric Company, whose address is Allentown, Pa., which company is engaged in the distribution of electricity to the inhabitants of certain districts in Manor Township.

(b) Edison Light & Power Company, York, Pa., successor to Chanceford Township Light, Heat and Power Company, which company is engaged in the distribution of electricity to the inhabitants of the Township of Chanceford.

(c) Philadelphia Electric Power Company, whose address is Philadelphia, Pa., which company operates the project known as "Conowingo Project".

[23300] (page 5)

(d) Philadelphia Electric Company, whose address is Philadelphia, Pa.

(e) Chester Valley Electric Company, whose address is Coatesville, Pa., which company is engaged in the distribution of electricity to the inhabitants of the Borough of Coatesville, Dowingtown, Parkesburg and neighboring territory in Chester County, Pennsylvania.

B. That the approval is necessary and proper for the service, accommodation and convenience of the public for the following reasons:

At the present time your petitioner, in accordance with the provisions of the Commission's order of March 31, 1930 and the general plan of power disposal set forth in testimony at the hearing of February 5, 1930, is selling the entire output of its Safe Harbor plant to Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water & Power Company. The latter company resells its portion to the customers specified in the Commission's order. In the future, however, it will probably be

desirable that both your petitioner and Pennsylvania Water & Power Company become parties to power supply contracts with the allowed customers and that your petitioner be able to sell power and energy to such customers directly as well as, or instead of, indirectly. Therefore request is made for the right to make such sales directly and/or indirectly.

Your petitioner is also requesting that three companies be added to the list of customers to which Safe Harbor [23301] (page 6) power may be sold, viz: Metropolitan Edison Company, Philadelphia Electric Company and The Pennsylvania Railroad Company.

Four main generating units, with a total capacity of 170,000 horsepower, are now in operation at Safe Harbor, and your petitioner has available during periods of ample river flow, considerable off-peak hydro energy which is not utilized in serving the customers named in the Commission's order. The sale of such energy to other electric companies would save fuel and utilize water power now going to waste. In particular, Pennsylvania Water & Power Company has made an interconnection with Metropolitan Edison Company at York for interchange of power and energy, which interconnection makes it possible for Pennsylvania Water & Power Company to resell to Metropolitan Edison Company energy generated at Safe Harbor which would otherwise go to waste. At present Pennsylvania Water & Power Company, during periods of ample river flow, is supplying to Lancaster (Pennsylvania Power & Light Company) and to Coatesville (Chester Valley Electric Company) only energy purchased from Safe Harbor, and to Edison Light and Power Company of York and to Metropolitan Edison Company energy generated at its own Holtwood plant. Such separate operation of the hydro plants, made necessary by the present restrictions on sale of Safe Harbor energy, decreases the utilization of hydro energy and causes waste of fuel at the steam-electric plants in the

interconnected system, with consequent economic loss. It also sacrifices reliability and safety of operation.

[23302] (page 7)

Your petitioner believes that there will be an interconnection between its plant and the system of the Philadelphia Electric Company and/or its subsidiaries and desires to be able to sell electric power and energy to that company.

A recent development is the agreement dated September 2, 1931, between Consolidated Gas Electric Light and Power Company of Baltimore, Pennsylvania Water & Power Company and your petitioner, jointly as the "Electric Companies", on the one hand, and the Pennsylvania Railroad Company, on the other hand, under which the Baltimore Company will sell to the Railroad Company in Maryland all of the power and energy required for the electrification of the Railroad Company's lines from the Susquehanna River to Washington, D. C. The same contract covers the supply of power and energy for the electrification of lines of the Railroad Company in the vicinity of Safe Harbor. It is expected that there will be two points of supply of such power and energy to the Railroad Company in Pennsylvania—Safe Harbor in Manor Township and Holtwood in Martic Township, Lancaster County. The bulk of power and energy thus supplied will originate in the Safe Harbor hydro plant, but some of it will be generated at the Holtwood hydro and steam plants and at times of low river flow the supply of hydro energy will be supplemented by steam energy purchased from the Baltimore steam plants or from other sources. It is intended that the sale in Martic Township be made by the Pennsylvania Water & Power Company. It is desirable that the sale in Manor Township be made either by your petitioner or [23303] (page 8) the Pennsylvania Water & Power Company or by both, depending upon the actual conditions existing at the time, such as amount and division of load,

economic source of supply, transmission facilities available, etc. Therefore your petitioner is asking both for the removal of the restriction previously imposed upon the resale of Safe Harbor power and energy by Pennsylvania Water & Power Company and for approval of direct supply to The Pennsylvania Railroad Company in Manor Township.

Approval at this time of the supply of Safe Harbor power and energy to The Pennsylvania Railroad Company in Pennsylvania will make possible (1) the coordination of such supply with supply to the Railroad Company's lines in Maryland; (2) maximum reliability and economy of supply to the Railroad Company from the regional power supply system of the associated "Electric Companies" at several widely separated points, with consequent benefit to the public; and (3) the present design and layout, and the future use for supply in Pennsylvania, of special facilities at Safe Harbor, some of which are about to be installed for supply to the Railroad Company in Maryland. It is essential that your petitioner, the Pennsylvania Water & Power Company, and the Railroad Company be able to plan their investment and equipment installations with the electrification of lines in Pennsylvania in view. If expenditures are made now for facilities which later cannot be used, or if duplication of facilities becomes necessary, there will be an economic loss which will be to the disadvantage of the Railroad Company, your petitioner and the public.

[23304] (page 9)

These two examples show that the limitations on the sale of Safe Harbor power and energy are causing, and if continued will increasingly cause, economic losses to the disadvantage of your petitioner, its customers and the public.

Wherefore, your Petitioner prays your Honorable Commission to issue a Certificate of Public Convenience

under the provisions of Article III, Section 3(a), and Article V, Sections 18 and 19, of the Public Service Company law evidencing its approval of the modification of the order of the Public Service Commission issued to your petitioner, Safe Harbor Water Power Corporation, on the 31st day of March, A.D. 1930.

And it will ever pray, etc.

Application Docket No. 21579 (Folder No. 2)

In re: Application of SAFE HARBOR WATER POWER CORPORATION for approval of the beginning of the exercise of the rights, power or privilege of the supply, storage or transportation of water and water power for commercial and manufacturing purposes, in the Township of Manor, Lancaster County, and the Township of Chanceford, York County.

REPORT OF THE COMMISSION

BY THE COMMISSION:

Safe Harbor Water Power Corporation is a corporation of the State of Pennsylvania, formed on January 6, 1930, by the merger and consolidation of Safe Harbor Water Power Corporation, (incorporated February 19, 1929), and Chanceford Water Power Corporation (incorporated February 19, 1929), with corporate purpose—the supply, storage and transportation of water and water power for commercial and manufacturing purposes in the Township of Manor, Lancaster County, Pennsylvania, and in the Township of Chanceford, York County, Pennsylvania—and possessing the rights and powers conferred upon water and water power companies by the Act of Assembly, approved the 2nd day of July, 1895, P.L. 425, as amended by the Act of the 7th day of May, 1929; P.L. 1688.

The present proceeding is for the Commission's requisite approval under the provision of Article III, Section 2(b), of the Public Service Company Law, of the beginning of the exercise by Safe Harbor Water Power Corporation of its rights, powers and privileges.

[23309] (page 2)

Formal protests were filed by Edison Electric Company, a corporation of the State of Pennsylvania, engaged in furnishing electric energy to the public in Manor Township, Lancaster County, and other municipalities of said county, and by Edison Light and Power Company, a corporation of the State of Pennsylvania engaged in furnishing electric energy to the public in various municipalities of York County, including the Township of Chanceford. These protestants allege that the sale by Safe Harbor Water Power Corporation of electric energy generated at its proposed plant in any manner which would permit such

energy or electric power to be delivered and used in their territory without the consent of The Public Service Commission first had and obtained would be prejudicial to their rights and detrimental to the service being furnished by them. These protests have been satisfied by stipulation filed of record.

Philadelphia Electric Company and Philadelphia Electric Power Company were represented at the hearing by counsel. A stipulation filed by the applicant company satisfied said companies and no protest or objection was entered of record by them.

Certain citizens of Lancaster and York counties residing in the vicinity of the Safe Harbor project appeared at the first hearing and informally stated that their interest in the matter related to the construction of the dam in a manner to provide a roadway for vehicular and pedestrian traffic across the Susquehanna River forming a connecting link between highways on the York and Lancaster sides of the river to be constructed at some future time. The examiner conducting the hearing informed these gentlemen that in his opinion the Commission had no jurisdiction in the present proceeding to compel the applicant corporation to provide a roadway or bridge across the river, but would use its good offices in the matter of such roadway. Conferences were held with representatives of the company who took the position that construction of the dam with a highway crossing was not necessary at this time; that the cost of providing the roadway on the dam—approximately $1,000,000, would not be justified, but that the company was willing to grant to responsible parties a right of way across the dam for the construction of a bridge or highway crossing at any time in the future.

At the second hearing the citizens of York and Lancaster counties were represented by counsel. No formal protest was filed but a motion however was made to call witnesses to prove the benefits and advantages to the public if a highway road was provided on the dam. The examiner

ruled that it would serve no [23310] (page 3) good purpose to extend the record to include testimony on a matter which was not subject to the jurisdiction on the Commission, but granted the counsel for the citizens the right to file brief on the jurisdictional question with the understanding that if the Commission determined it had jurisdiction to grant further hearing. The ruling of the examiner is sustained. The Commission has carefully examined briefs filed on the question and is of the opinion that the general provisions of the Public Service Company Law referred to by counsel are not controlling and without a definite and specific provision conferring such jurisdiction it is without authority.

The Legislature of Pennsylvania has conferred upon the Water Supply Commission (now Water and Power Resources Board) authority to regulate the construction of dams and the development of the water power resources of the state. Similar authority and jurisdiction is conferred by federal statute upon the Federal Power Commission. This jurisdictional question has been decided by the Supreme Court of Pennsylvania in case Pa. Power Co., Appellant, v. Public Service Commission, 261 Pa. 211 "It (Public Service Commission) is not invested with authority to regulate the erection of dams or the development of the water power resources of the State. That is a subject over which the Water Supply Commission has jurisdiction. * * * The authority of the Water Supply Commission to impose regulations and conditions to be observed by a corporation proposing to develop the water power of a stream is broad as shown by the language of the statute. * * * It has undoubted authority to attach any of the conditions necessary to carry out the purposes of the legislation on the subject with a view to the protection of the rights of the public and of individuals or companies having vested interests."

It appears from the record that the Safe Harbor Water Power Corporation will construct a solid concrete gravity type dam crossing the Susquehanna River at a

point about one-quarter of a mile upstream from the mouth of the Conestoga Creek, about eight miles above Holtwood, Pennsylvania, and about 17 miles above the Pennsylvania-Maryland State Line, with total length of 3635 feet of which 1818 feet will be bulk-head or non-flow sections and 1817 feet with be stowaway sections; the reservoir formed by the dam will extend upstream for about ten miles and that its widest point will be one and three-quarter miles wide; and a power house located on the Lancaster County side of the river with total length when completed of 1048 feet and width of 157 feet, with initial installation of six main generating units having a total generator capacity of 168,000 kilowatts.

The estimated cost of the project is $30,000,000, which will be financed by the sale of the company's stock or other [23311] (page 4) securities. The corporate and financial plans including preliminary costs of the project have been examined by the Commission's technical staff and in general conform to the governing ruling and policy of the Commission. The project is feasible and will conserve the natural resources of the state and supplement the present output of the hydro-electric plant of the Pennsylvania Water and Power Company, the present peak demand of which is more than two and one-half times the average high-flow capacity of the plant.

The Commission finds and determines that the approval of the construction, subject to the stipulations filed of record, is necessary and proper for the service, accommodation and convenience of the public.

A certificate will issue accordingly.

THE PUBLIC SERVICE COMMISSION
OF THE
COMMONWEALTH OF PENNSYLVANIA

Application Docket No. 21579 (Folder No. 2)

In re: Application of SAFE HARBOR WATER POWER CORPORATION, for approval of the beginning of the exercise of the rights, power or privilege of the supply, storage or transportation of water and water power for commercial and manufacturing purposes, in the Township of Manor, Lancaster County, and the Township of Chanceford, York County.

ORDER

This matter being before The Public Service Commission, upon petition and protests on file, and having been duly heard and submitted by the parties and full investigation of the matters and things involved having been had, and the Commission having on the date hereof made and filed of record a report containing its findings of fact and conclusions thereon, which said report is hereby approved and made a part hereof;

Now, to-wit, March 31, 1930, IT IS ORDERED: That a certificate of public convenience issue evidencing the Commission's approval of the beginning of the exercise by the Safe Harbor Water Power Corporation of its rights, powers and privileges subject to the following conditions:

FIRST: That the proposed Safe Harbor Hydro Electric Project shall be so constructed and so operated that it shall not unreasonably interfere with the use of the waters of the Susquehanna River by the Project known as the "Conowingo Project", heretofore approved by this Commission in Application Docket Nos. 12401 to 12405 (both inclusive), year 1925, to the extent that the use of the said waters shall be

reasonably necessary for the purposes of said "Conowingo Project".

SECOND: That the Safe Harbor Water Power Corporation shall not, without the approval of The Public Service Commission hereafter first obtained, [23313] (page 6) sell or dispose of the electric energy or power to be generated at its plant, at Safe Harbor, Lancaster County, Pennsylvania, to any customer other than the Consolidated Gas Electric Light and Power Company, of Baltimore, Maryland, and the Pennsylvania Water and Power Company, of Holtwood, Pennsylvania, and to the latter Company only for re-sale to present customers of said Pennsylvania Water and Power Company, viz: Edison Electric Company, of Lancaster, Pennsylvania; the Chester Valley Electric Company, of Coatesville, Pennsylvania; Edison Light and Power Company of York, Pennsylvania; and the Consolidated Gas Electric Light and Power Company of Baltimore, Maryland.

THE PUBLIC SERVICE COMMISSION
OF THE
COMMONWEALTH OF PENNSYLVANIA

THE PUBLIC SERVICE COMMISSION OF THE COMMONWEALTH OF PENNSYLVANIA

Application Docket No. 21579, (Folder No. 2)

In re: Application of SAFE HARBOR WATER POWER CORPORATION—For modification of the Certificate of Public Convenience approving the beginning of the exercise of the rights, power or privilege of the supply, storage or transportation of water and water power for commercial and manufacturing purposes in Manor Township, Lancaster County, and Chanceford Township, York County, by amending the restriction which limits service to certain customers named therein.

REPORT AND ORDER OF THE COMMISSION

BY THE COMMISSION:

This is an application for modification of one of two conditions in a certificate of public convenience heretofore issued to the Safe Harbor Water Power Corporation, hereinafter referred to as Safe Harbor Company, a domestic corporation authorized by its charter to supply, store, and transport water and water power for commercial and manufacturing purposes in Manor Township, Lancaster County, and Chanceford Township, York County, in this Commonwealth.

In this certificate granted by this Commission, approving applicant's exercise of its charter rights, there were inserted two conditions. The first related to the method of construction of applicant's hydro-electric project by means

of which its electric power was to be generated. With this condition we are not here concerned. The second condition restricted the sale or disposal of hydro-electric power to "the Consolidated Gas Electric Light and Power Company, of Baltimore, Maryland, and the Pennsylvania Water and Power Company, of Holtwood, Pennsylvania, and to the latter company only for resale to present customers of said Pennsylvania Water and Power Company, viz: Edison Electric Company of Lancaster, Pennsylvania; Chester Valley Electric Company of Coatesville, Pennsylvania; Edison Light and Power Company of York, Pennsylvania; and the Consolidated Gas Electric Light and Power Company of Baltimore, Maryland."

In the instant proceeding applicant asks this Commission so to modify or enlarge the latter condition as to permit it to sell or dispose of its power directly, not only to the companies it is now serving indirectly through Pennsylvania Water and [23316] (page 2) Power Company of Holtwood, Pennsylvania (hereinafter referred to as Holtwood Company), but also to three additional companies not now served either directly or indirectly by it, viz: Metropolitan Edison Company of York, Pennsylvania, The Pennsylvania Railroad Company, and the Philadelphia Electric Company. Applicant also asks the right to sell or dispose of power to Holtwood Company for resale to all companies named in the existing certificate or included in the proposed modification, but to none not so named or included.

Formal protests were filed by the Pennsylvania Power and Light Company, and the Commission has permitted the United Mine Workers of America, the Chambers of Commerce of Pottsville, Hazleton, Shenandoah, Mt. Carmel, Wilkes-Barre and Scranton, and various coal operators and municipalities in the anthracite district of the Commonwealth to intervene in protest. Hearings have been held, briefs filed, oral argument presented, and the matters are now before us for disposition.

The protests so far as they relate to prospective consumers other than the Metropolitan Edison Company, The Pennsylvania Railroad Company and the Philadelphia Electric Company, are based on the contention that the applicant has failed to sustain the burden of proof that approval is necessary or proper in the public interest. The uncontradicted testimony in support of the application is to the effect that contractual relationships and inter-company accounting will be simplified if direct sale by Safe Harbor Company is permitted that it is desirable in the public interest for both that company and Holtwood Company, a nearby electric power producer, to be in a position to make joint contracts with and supplement service to the permitted consumers. In the absence of any showing that approval of direct sale of power by Safe Harbor Company to the said companies now served by Holtwood Company would adversely affect the public interest, the Commission finds and determines that applicant has met the burden of proof resting upon it, and that approval of such direct sale is necessary or proper for the service, accommodation and [23317] (page 3) convenience of the public.

As to the proposed sale of Safe Harbor power direct to Metropolitan Edison Company, the record shows that the loss by reason of Safe Harbor's inability to make such sale amounts to $1,900 per week, due to (1) reduction in amount of energy sold and (2) additional and unnecessary steam generation at Baltimore. There is no testimony or indication that approval of this phase of the application will injure protestant, Pennsylvania Power and Light Company. The Commission therefore finds that it is in the public interest that the applicant be permitted to sell power directly to Metropolitan Edison Company.

With reference to the Philadelphia Electric Company, the record shows that the sale of Safe Harbor power to that company will permit more complete utilization of the water power of the Susquehanna River, prevent the waste of off-peak hydro energy during periods of substantial river flow,

and tend to reduce the overall cost of power supply over a large territory. The Commission, therefore, finds that approval of direct sale of Safe Harbor power to Philadelphia Electric Company is in the public interest.

The major issue in the present proceeding is raised by the application for the right to sell power to The Pennsylvania Railroad Company, a contract for such sale having been entered into between the applicant and the railroad, subject to Commission approval. Much testimony of an involved and technical nature has been presented upon this issue, and the Commission has had the benefit of briefs and oral arguments on both sides.

The majority of protestants' contentions may be disposed of without extended discussion. The argument that applicant has shown bad faith and has violated the terms of stipulations and contracts by asking for these additional rights is unconvincing in view of the fact that the stipulation upon which the contention is based [23318] (page 4) included the condition "without the approval of The Public Service Commission hereafter first obtained". The present application clearly fulfills this condition.

It is further contended that Commission approval would authorize acts ultra vires Safe Harbor Company, since that corporation's charter grants the right to dispose of electric power developed "by means of water power" only, and the proposed operations would involve the sale of steam power produced in Baltimore. A subordinate point is made to the effect that the sale by Safe Harbor Company of the power generated in Baltimore will mean that a foreign corporation is doing business in Pennsylvania without authority from this Commonwealth. These two arguments are answered by the terms of the application. Commission approval of the application as filed would authorize only the sale of power developed "by means of water power", a right specified in applicant's charter. The circle of applicant's consumers would be enlarged but the character of applicant's production of

power and of the power sold would remain unaffected. Similarly, the Commission does not have before it an application for the right to sell electric power generated by steam. Issuance of the certificate prayed for will not confer upon applicant corporation the right to sell steam generated power, nor would the refusal of the certificate operate in any way to prevent the sale of such power by a foreign corporation. The present applicant is a domestic corporation asking the right to expand its business in Pennsylvania, and the question of whether or not a foreign corporation is doing or intends to do business within this State is not, in our opinion, material in this proceeding.

It is sufficient to say, in answer to protestant's argument that this application involves a new class of service by Safe Harbor Company, that if approval of the proposed service is necessary or proper in the public interest the mere novelty of such service cannot avail to prevent favorable action by the Commission.

The contention that approval would reduce the possible consumption of anthracite coal by Pennsylvania Power and Light Company is entitled to great weight [23319] (page 5) and careful consideration. But it loses much of its force in face of the fact that the two major parties in this case are not the sole possible sources of electrification power. Upon refusal of this application the railroad might decide to purchase power from the Philadelphia Electric Company, the Metropolitan Edison Company (which has a distribution point at Middletown, Dauphin County, not far from Safe Harbor, Lancaster County), or from some source outside the State. Even if the Commission were convinced that a negative decision in this case would secure the electrification contract for protestant, and that protestant would generate electric power by steam—which it is in no way bound to do,—with a consequent increased consumption of anthracite coal, this conviction could not, of itself, determine the ultimate decision. The Commission in this case, as in all cases, must balance the interest of various

classes and portions of the public and make that finding which, in comprehensive contemplation of all of the known facts, will confer the greatest benefit upon the greatest number of citizens of this Commonwealth.

The protest of the anthracite mining interests awakens our deep concern. However, the use of electric energy in the place of steam energy in railroad operation is a development of rather recent years. Furthermore, the territory here involved is relatively far removed from the anthracite mines; indeed, it is at the very door of the applicant, a great Pennsylvania enterprise harnessing the Susquehanna River and more directly concerned with electric power production and use than is the mining industry. The Commission could not, even by refusing this application, assure increased business to coal producers or increased consumption of their product. Therefore, although we are fully sensible and appreciative of the unfortunate economic situation which confronts the coal industry in our Commonwealth today, we cannot give controlling weight to this protest.

[23320] (page 6)

The issues of this proceeding may be stated in the form of two questions, viz: (1) Is this application so premature as to prevent proper consideration and decision at this time; and (2) In view of the fact that The Pennsylvania Power and Light Company is at present authorized to furnish and is furnishing electric power to consumers in the territory involved, should Safe Harbor Company be granted the right to sell power to The Pennsylvania Railroad Company in the same territory?

With reference to the first question, the record shows that the parties themselves have for three years been discussing the problem of supply of power in Lancaster County for railroad electrification; that the electrification of the Washington-Perryville Line of the railroad will be inaugurated in the near future; that upon its completion,

Philadelphia-Harrisburg electrification will be the next project to be consummated; and that the present design, location, and character of transmission lines and equipment, and the construction of a substation and a cable tunnel at Safe Harbor depend upon the prospect of the supply of power to the railroad company. The record is replete with references to conferences between the parties upon the subject matter of this case, and it is clear that much time and thought have been expended upon the problems involved and their solution. The Commission, in view of the facts appearing in a very voluminous and carefully developed record, does not feel that the information now before it is inadequate, nor is it persuaded that lapse of time will substantially alter the principles and conditions upon which its decision must be based.

The great bulk of the testimony was directed to the second question. The Pennsylvania Power & Light Company, hereafter referred to as protestant company, stated that it could and would render to The Pennsylvania Railroad Company the same service at the same place and at the same rate as provided by the contract with Safe Harbor Company. In support of this statement, plans were outlined for the construction of a new steam generating plant located near Sunbury and for a transmission line from that plant to Manor Township, Lancaster County, some seventy miles away. The Sunbury plant and the transmission line therefrom are the backbone of the plan, although some additional power [23321] (page 7) would be secured from existing generating plants. Certain construction work and installations at Safe Harbor would be necessary to enable applicant to fulfill the terms of the railroad contract, but it is clear from the record that such construction and installations will be much less extensive and less costly than those which protestant company would provide to render the same service.

Thus the issue is clearly presented whether protestant company is capable of rendering the same service at the

same rates. It is undisputed that the Safe Harbor generating plant is located at approximately the load center of the Pennsylvania's electrification. It would, therefore, seem that more reliable and efficient service could be furnished from that plant than by means of a system involving long distance transmission lines. Protestants did not deny that the Safe Harbor plant was in a very advantageous location and it appears that if protestant company were to supply the railroad load it is entirely possible that it would contract with the Safe Harbor Company for some of its power. Apparently protestant company is willing to have the Safe Harbor Company supply power to the railroad through it and for its account. It is impossible from examination of the record to say definitely that protestant company rather than the Metropolitan Edison Company or the Philadelphia Electric Company will secure the railroad business if this application is refused; or that if it does get the business, supply by it of electrification power purchased from the applicant will not be the ultimate result; or even that the railroad might not generate its own electric energy. Although it is the general policy of the Commission to prevent the establishment of competitive services and to protect public utilities which have developed and served the territory in which they operate, this general policy cannot and should not be applied where the proposed service is necessary in addition to existing service and the applicant company is better able to meet a specific need; especially when the presently effective certificate was granted with no thought that the large new railroad business would develop in the territory.

The fact that The Pennsylvania Railroad Company has chosen the applicant as its most available source of supply may be taken as some indication that protestant [23322] (page 8) company's service would not be equally efficient. The railroad in this instance will be by far the largest consumer of electricity in Manor Township, and its convenience and interest should govern, provided the consuming

public in general is not injured or inconvenienced. Although no utility can, by entering into a contract, compel Commission approval of operation under such contract, nevertheless the Commission in the present case must give some weight to the conclusion reached by The Pennsylvania Railroad Company after a detailed investigation and a comprehensive survey of the entire situation.

After careful consideration of the facts of record and the arguments presented, The Commission is of opinion and finds that approval of this application is necessary or proper for the service, accommodation and convenience of the public: THEREFORE,

NOW, to wit, January 10, 1933, IT IS ORDERED: That the second condition in the certificate of public convenience heretofore granted to the applicant under date of March 31, 1930, be and is hereby modified to read as follows: That the Safe Harbor Water Power Corporation shall not, without the approval of The Public Service Commission hereafter first obtained, sell or dispose of the electric energy or power to be generated at its plant at Safe Harbor, Lancaster County, Pennsylvania, to any customer other than: (1) Consolidated Gas Electric Light and Power Company of Baltimore, Maryland; (2) Pennsylvania Power & Light Company; (3) The Pennsylvania Railroad Company; (4) Chester Valley Electric Company of Coatesville, Pennsylvania; (5) Edison Light and Power Company of York, Pennsylvania; (6) Metropolitan Edison Company; (7) Philadelphia Electric Company; and (8) Pennsylvania Water & Power Company of Holtwood, Pennsylvania, and to the latter company only for resale to the other companies enumerated herein.

22. Net income	$ 229,000	$ 201,000	$ 229,000	$ 201,000

Note:

The data used for these illustrations correspond generally to the operating ratios, the utility plant per dollar of revenue and the ratio of depreciation reserve to total plant shown by the Summary Section of Statistics of Electric Utilities in the United States, Federal Power Commission, 1939.

Case 1 represents the use of an undepreciated rate base and a credit to consumers on the balance in the depreciation reserve at a rate corresponding to a risk free rate of interest (assumed here to be 2.5 per cent).

Case 2 represents the use of an undepreciated rate base and a credit to consumers on the balance in the depreciation reserve at a rate equal to the fair rate of return (assumed here to be 6.5 per cent).

Case 3 represents the use of a depreciated rate base determined by deducting from total utility plant 5/13 of the balance in the depreciation reserve.

Case 4 represents the use of a depreciated rate base determined by deducting the balance in the depreciation reserve from total utility plant.

EXHIBIT No. 169.

[23331]

January 31st, 1907.

To

The Auditor General of Pennsylvania.

Dear Sir:—

In explanation of the report of capital stock of McCall Ferry Power Company submitted herewith and of the omission of any certificate of valuation, the undersigned, Vice-President and Treasurer, respectively, of said Company, beg to state as follows:

It seems to them impossible to estimate and appraise the capital stock of said Company for purposes of taxation at the present time, as it existed between the 1st and 15th days of November A. D. 1906. In the first place, the stock did not have, at that time, nor has it had since, any market value, there having been no sales thereof, according to our information and belief. No price or value is "indicated or measured by net earnings or by the amount of profits made either declared in dividends or carried into surplus or sinking fund"., because there have been no profits of any sort. On the other hand, if the stock were valued by the mere intrinsic value of the tangible property and assets which it represents, that valuation might be too low. This property and assets, at the time under consideration, consisted chiefly of a partially constructed dam and power house, real estate and flowage rights affecting real estate, if the latter may be called tangible property. The Company is engaged in constructing a dam in the Susquehanna River to be used in the development of water power for the manufacture of electricity for sale and it has acquired properties for this purpose. When its dam, power house, transmitting lines, &c. are completed and in operation, and if it shall find customers for its products, it may be demonstrated that its property and good will, when so used and availed of are

such as to make its capital stock of very considerable value. At present it has, of course, no good will nor has it any special franchises or privileges.

In view of the foregoing, the undersigned have found themselves entirely unable to make any estimate and appraisal of the capital stock of said Company for purposes of taxation at the present time.

Yours respectfully,

(S.) J. W. Kirkland
Vice-President.

(S.) Wm. H. Barnum
Treasurer.

MC CALL FERRY POWER COMPANY
Sixty Wall Street
New York

January 19, 1906.

Boyd Ehle, Esq.,
McCall Ferry, Penna.

Dear Ehle:—

I am enclosing form of stock deposit agreement for 100 shares of the common stock of this Company, which I am putting in your name to give you an additional interest in the Company. I also enclose a similar agreement for Anderson for 50 shares. Will you both sign these at the places indicated, and return them to Messrs. Harvey Fisk and Sons, who will return to you copies of the agreement with their signature and that of the Voting Committee; these signed agreements will be your evidence of title to the stock, and the stock certificates themselves will be delivered when the Voting Committee expires. Will you explain this to Anderson, and tell him that I hope the stock before long will be worth something?

Yours very sincerely,

(S.) Cary T. Hutchinson.

EXTRACT OF THE TESTIMONY OF J. H. HARLOW IN THE CASE OF SUSQUEHANNA POWER COMPANY VS. THE PROPRIETORS OF THE SUSQUEHANNA CANAL IN THE CIRCUIT COURT FOR CECIL COUNTY, JANUARY 28TH, 1907.

(Page 99)

* * *

Q. Mr. Harlow, you have been asked as to the value of these bonds and stock that you took from the McCall's Ferry Company and I think you said you had no dsire to sell them; that you were willing to wait and see what their value would be; you do not mean to say that there is a value of 90 on the bonds now?

A. The reason that I said I was willing to hold on to mine is because I believe they are going to be a good thing; they are paying interest on them now so I think I can hold them.

Q. Not out of earnings of course?

A. No, sir; not out of earnings.

Q. You don't mean to say there is any market for that stock at ten cents on the dollar?

A. No, sir; I never heard of it.

MR. WILLIS: There has been none of it put on the market?

WITNESS: No, sir; it has not any market value yet.

THE COURT: How are these bonds bearing interest?

MR. WILLIAMS: Out of money provided until operations begin.

WITNESS: There have been no bonds issued except to Mr. McGaw and myself.

* * *

Q. Now Mr. Harlow will you please tell the jury what in your judgment is the present value of the first mortgage bonds of the McCall's Ferry Power Company; or I had better say the value at the time you took them a year ago?

A. I was told by the financial agent—

Q. Financial agent for whom?

A. For what they now call the McCall's Ferry Power Co.; a man by the name of Brown connected with Harvey, Fiske & Co., he said there had been 20% paid in; I presume under the terms of the underwriting there had been another 20% paid in and perhaps a third 20%.

Q. I am asking you what was their value when you took them?

A. When we bought them about 20 cents on the dollar; when we sold the properties, I mean.

Q. What in your judgment then apart from the actual cash that was paid in was the then value of those bonds?

A. $50,000.

Q. And the value of the stock?

A. It was practically nothing; you might call it anything you like, it is common stock and maybe a long time before it has any value.

* * *

EXHIBIT No. 173.

[23335]

(Copied from McCall Ferry Power Co file #112)

The only water-power on the Atlantic Seaboard between New York and Washington is on the Susquehanna River. It is now proposed to develop about 60,000 horse-power at McCall's Ferry on the Susquehanna, about forty miles distant from Baltimore, Harrisburg, Reading and Wilmington; fifty miles from Chester, and sixty-five miles from Philadelphia. This means that the Power Company will have 50,000 horse-power to sell. There is no difficulty in carrying the power as far as Philadelphia or further.

Mr. George S. Morrison, whom we knew very well for many years, was the first engineer to investigate this project thoroughly, to make plans for the dam, etc. Since his death, Mr. William Barclay Parsons, who laid out the subway in New York, who was the engineer of the Rapid Transit Commission, and who is now consulting engineer of the Interborough Rapid Transit Company, has taken up the work left by Mr. Morrison. In General, it is sufficient to say that the engineers report that there is no difficulty in building the dam, and that in every way the project is feasible.

In the territory tributary to this development there are at present more than 500,000 steam horse-power in use. There is, in the opinion of the engineers, and in the opinion of other experts whom we have consulted, no doubt of the ability of the Company to sell this power at profitable prices.

We have gone over the figures given us by the Power Company very carefully, and have consulted our experts here in regard to them. The engineers of the Company, including Mr. Parsons, estimate the cost of the development at $7,200,000. In this is included a considerable sum for contingencies. We, however, are inclined to increase

this sum. An outside figure for the total cost, including contingencies, engineering, and everything else, seems to us $7,843,000.

The estimated income, is figured by the engineers of the Company and by our experts at practically the same figure, viz., $900,000 net. This will be sufficient to pay 5 per cent. interest on the bonds issued, depreciation, 5 per cent. on the preferred stock and something on the common.

The net income, it is believed, may be considerably increased by the sale of surplus power available for a part of the year only.

It is proposed to authorize an issue of five percent. bonds, limited to $10,000,000, of which $8,000,000 will now be underwritten at 90. The underwriters will be called upon for twenty per cent. of their underwriting in cash. Nothing further will be called from them for three years, arrangements having been made to borrow the funds required over and above the twenty per cent. called. Messrs. Harvey Fisk & Sons will act as syndicate managers and will agree to get their commission on the sale of the bonds out of the price at which they are sold over and above 90. The bonds will, we believe, be non-taxable in Pennsylvania.

[23336] (page 2)

With the $8,000,000 bonds underwritten will be given a bonus of $4,000,000 five per cent. cumulative preferred stock. This will be the profit to the underwriters.

The common stock issued will be used to pay the promotors, bankers, etc. The bankers receive no cash commission. All preferred stock issued goes to the underwriters.

A subscriber to $100,000 underwriting will therefore be called upon to put up $20,000 for three years or less. When the bonds are sold this will be returned and the underwriter will get $50,000 preferred stock bonus for nothing.

The management of the company will be in the hands of a committee, on which will be a member of the firm of Harvey Fisk & Sons, a member of the firm of Bertron, Storrs & Griscom, Mr. C. A. Coffin, Mr. H. F. Dimock, who has been interested in this project for some years, myself, and possibly one or two others.

We propose to keep part of this underwriting for ourselves.

Very truly yours,

(S.) Gardiner M. Lane.

P.S. The flow of the river is well known. There is a period of low water which averages about a month a year. The longest period of low water ever known was for three months. The above figures include $1,200,000 for a steam plant to be used during periods of low water, and at other times if desirable.

G.M.L.

EXHIBIT No. 174.

[23337]

(Copied from McCall Ferry Power Co. File #112 L. H. & Co.)

Office of
Lee Higginson & Co.
44 State Street,
Boston

PH—F.

July 19, 1907.

Dear Sir:

About two years ago we placed over $2,000,000 Susquehanna Power Company underwriting, consisting of First Mortgage 5 Per Cent bonds, at 90, carrying a bonus in some cases of 45 per cent., and in some cases of 50 per cent 5 per cent preferred stock, cumulative after April 15, 1909.

We have now bought $100,000. more of the bonds, carrying preferred stock as a bonus which we shall want to sell within the next week or so. Perhaps a short summary of the company and statement of earnings will help to refresh your memory.

The Susquehanna Power Company, or McCalls Ferry Power Co., as we believe it is now to be called, is situated on the Susquehanna River, about 40 miles from Baltimore, Harrisburgh, Reading and Wilmington, 50 miles from Chester and 65 miles from Philadelphia. There is no difficulty in carrying the power as far as Philadelphia or further. The only water-power on the Atlantic Seaboard between New York and Washington is on the Susquehanna River. In the territory tributary to this company there are at present more that 500,000 steam horse-power in use. There is no doubt of the ability of the company to sell all of its power at profitable prices,—in fact, we submit a little

later in this letter figures based on contracts already closed and about to be closed.

The company is being built by the best engineers in the country, Mr. William Barclay Parsons, who built the New York subways, being one of the consulting engineers.

The company was formed originally to develop 50,000 horse-power, but finding that 75,000 horse-power could be developed with a very little additional expense and that the company could sell the full amount without trouble, the increased work was undertaken. The main dam is now almost completed and the chief work remaining is the completion of the power-house and the erection of the transmission lines.

About three weeks ago we sent you an illustrated pamphlet showing in detail the construction of the property. We are now sending you, under separate cover, a copy of the syndicate agreement, giving further details regarding the issue of bonds.

The management of the company is in the hands of a committee on which is a member of the firms of Harvey Fisk & Sons, Bertron, Storrs & Griscom, and Lee, Higginson & Company; also on this committee are Mr. C. A. Coffin, and Mr. H. F. Dimock who has been interested in this project for a number of years.

We quote below from a letter received from Messrs. Bertron, Storrs & Griscom. You will notice that the estimate of earnings is based on contracts already signed and on contracts which the company expects to close with a short time; also you will notice the extremely low prices at which these contracts have been made. If the company is able to earn 8 per cent, on its common stock, [23338] selling power at not over $25., it certainly is in a very safe position. You will also see that the earnings are estimated on the sale of only 75,000 horse-power, whereas the company will be able at times to deliver as much as 100,000 horse-power. This extra 25,000 horse-power, if sold, will be practically all net.

* * *

Our idea now is to sell $100,000 underwriting, figuring the bonds at 90, carrying a bonus of 45% preferred stock. The bonds are only 20 per cent paid, and no further call can be made until after May, 1908. You will notice in the syndicate agreement that the underwriters give an option on their bonds to the bankers at 90. It is hoped and expected that the bonds will be sold before any call in excess of the 20 per cent is made. This will leave the underwriters with the preferred stock costing them nothing. If this underwriting was attractive a year and a half or two years ago it is doubly so now as the chief construction work has already been accomplished and a majority of the contracts actually closed; in other words, we are now offering underwriting on a proposition the success of which is practically assured, and the offer seems extremely attractive. It is the same as if we should offer two years from now Central Colorado underwriting on the same terms as we are at present, and after that company had gone so far with its construction work as to prove its success beyond question.

You may offer any part of this $100,000 on the above terms, subject to confirmation with us. This additional amount which we are taking now is part of $600,000 which is being sold to pay for the cost of the 25,000 horse-power to be developed over and above the 50,000 planned at first.

If there are any further questions you wish to ask, kindly advise us.

Very truly yours,

EXHIBIT No. 175.

[23339]

(Copied from Co. File #3951 — 3)

McCALL FERRY POWER COMPANY
Office of the Chief Engineer
Room 2407, Sixty Wall Street.
New York City

April 20th, 1908.

H. F. Dimock, Esq. President,
McCall Ferry Power Company,
#60 Wall Street, New York City.

Dear Sir,—

The following report has been prepared to supplement the joint report of the Advisory Engineers of the Company, dated April 17th 1908, and gives the facts contained in that report in greater detail as well as certain additional information.

The original basis of this project was a dam at McCall Ferry in accordance with the general designs of the late Geo. S. Morison, with a crest elevation of 155 feet and a power house to deliver 50,000 horse power.

Further investigation showed that it was practicable to make the development on a larger scale, and plans were drawn for a dam having a crest elevation of 165 feet, and a power house to deliver 100,000 horse power.

At the time that capacity of the plant was doubled, it was known that it would be necessary to provide more money, but no steps were taken to this end; consequently last November the Company found itself out of funds and the work was discontinued.

This increase in the output of the plant was made possible by the excavation of a tail race, which, together with the increase in the height of the dam, gives an increase of approximately 15 feet in the available head, and also by reason of favorable contracts for the supply of auxiliary steam power required. The minimum power of the river is much less than this, and the economical output is determined principally by the cost of the auxiliary steam power that must be supplied during the low water season.

The condition of the work at present is,—

The dam is finished entirely across the river, with the exception of certain openings left in it for the passage of the spring flood waters; these openings can be closed at any time.

The power house substructure is completed; the intake and discharge passages for the water are finished and part of the superstructure is up. All construction work below the water level has been [23340] (page 2) completed and work can be carried on in the future without regard to the condition of the river, with the single exception of the excavation of the tail race, which must be done at low water. The foundation for both the dam and the power house is solid rock throughout; no artificial foundations of any kind have been used.

From now on the execution of the work will be simple; all the difficulties have been surmounted, and there is no possibility of future complication. Furthermore, the estimates of the cost to complete the work given herewith can be considered eminently safe, inasmuch as the costs are accurately known from our past work, and also because a large part of the total is for machinery and materials which are under contract.

It is the present plan to complete the power house and the works on the river and to install six units, this work to be done by the McCall Ferry Power Company, and to build a transmission line to Baltimore with a capacity of 60,000 horse power by a New Company; later the four additional

units will be placed in the power house, and additional transmission lines will be built, probably to Lancaster and Reading.

The total estimated cost of the power plant with all works on the river, including the hydraulic and electrical equipment for six units, and including allowances for interest and administration based on the assumed date of completion of July 1st, 1909, will be $10,300,000

The total cost of the transmission line to Baltimore, having a capacity of 60,000 h.p. including right-of-way and sub-station equipment complete, will be 800,000

Making the total cost of the plant and lines equipped to deliver 60,000 h. p. in Baltimore $11,100,000

The total cost for the four additional units in the power house, ready for operation, will be $600,000

The total cost of additional transmission lines for 40,000 h.p. to Lancaster and Reading, will be 900,000

Making the total cost of the plant completely equipped with ten units and with transmission lines to deliver 100,000 horse power $12,600,000

The Company has spent, or has in hand, a total of $7,500,000; it will therefore be necessary to provide $3,600,000 to complete the works and transmission lines for six units, and $5,100,000 to complete the works and lines for ten units.

* * *

[23343] (page 5)

Very truly yours

(S.) Cary T. Hutchinson
Chief Engineer.

EXHIBIT No. 176.

[23347]

(Copied from McCall Ferry Power Co. file #31)

KNICKERBOCKER TRUST COMPANY
66 Broadway.

New York
December 10, 1907

H. F. Dimock, Esq., President
McCall Ferry Power Co.,
60 Wall Street, N. Y.

Dear Sir:

On behalf of the Receivers of the Knickerbocker Trust Company, I beg to acknowledge receipt of a circular from you, dated December 3rd, announcing the practical stoppage of work of the McCall Ferry Power Company and stating that Company had no deposit with the Knickerbocker Trust Company, but that "the suspension of that Company did, however, interfere with our arrangements for getting money to carry on the work". It appears to the Receivers that this phrase is perhaps liable to misconception and misunderstanding. It is difficult to see how the suspension of the Knickerbocker Trust Company had anything to do with the stoppage of work of the McCall Ferry Power Company's undertaking, in view of the fact that no money had been called for from the Knickerbocker Trust Company to carry on the work, except $208,756.20, none of which was to be utilized for carrying on the work, but all for the payment of commissions on loans. In other words, none of it was to pass out of the hands of the Knickerbocker Trust Company or the Receivers to your Company of the Susquehanna Contracting Company.

Enclosed herewith I send you copy of a letter written on behalf of the Receivers, to the Susquehanna Contracting Company under date of December 7th, from which you will see that the Receivers have taken steps to complete the loan originally agreed to be made, and to renew the notes due November 1, 1907.

It seems to the Receivers that other causes must have led to the suspension of the work, the more probable one being that it had been ascertained that the sum agreed to be loaned will not be sufficient to complete the work. Neither the circular issued by you, nor the letter from the Chief Engineer attached thereto, give any information as to whether the money already agreed to be furnished will complete the work.

Very truly yours,

(S.) Henry C. Ide
Receiver

[23350]

(Copied from minutes of the Executive Committee of McCall Ferry Power Co held January 17th. 1908.)

Philadelphia, Jan. 11—1908

My dear Mr. Kirkland—

I am very much disappointed not to have heard from you before this in reference to the settlement of our September and October bills and our Executive Committee have now put it up to me to secure some definite information relative to the work of the McCall Ferry Power Company.

You may recall that I spoke to you early in December as to not having in writing any authority for the cessation of the work on this contract it having been done in a telephone communication from Mr. Cooper on October 24th. last.

In my last interview with you, you had great hopes of being able to give us some definite information the first week in January, but I have as yet heard nothing from you.

Will you please therefore write me upon receipt of this letter an official communication in regard to the actual stopping of work on the contract October 24th. last, and also in regard to making payment of our long overdue bills.

I am obliged to have this information to present at the meeting of our directors which takes place some time the week after next.

Trusting you have in the meanwhile been able to make arrangements to send us a substantial remittance, I am with kindest regards

Yours very truly

H. A. Hand
General Manager

EXHIBIT No. 179.

[23351]

(Copied from Co. file #3951—2)

McCALL FERRY POWER CO.

November 26, 1907.

J. W. Kirkland, Esq., Vice President,
McCall Ferry Power Company,
60 Wall Street, New York.

Dear Sir:—

In accordance with your request of yesterday we hand you herewith a statement showing number of men at McCalls Ferry employed each day during the current month to the 22nd inclusive, the work at which they were employed and the cost of same.

The work done during the month includes the placing of about 600 yards of concrete in the power house substructure at a point where ordinary high water would become a menace to the existing permanent work and plant, and also includes about 130 cubic yards of concrete placed in ice protection arches which was necessary to complete the same.

During the first few days of November the extra number of carpenters was employed in rendering all the head gates safe against high water and in general making the power house concrete safe against all possible floods.

The account "Miscellaneous", besides including electrician and watchmen, includes labor of unloading 10 cars of roof tile, office force on daily payroll, stable account, labor charged to Supply Co. and Hospital and labor of taking inventory.

Yours very truly,

(S.) J. P. Allen,
Purchasing Agent.

File # 15.)

6th May, 1909

R.M. Aitken, Esqr.,
Messrs. Kitcat & Aitken,
120, Bishopsgate Street Within,
E. C.

Dear Mr. Aitken,

* * *

[23361] (page 4)

* * *

We shall receive as a bonus for carrying out this proposition a total amount of $3,500,000 of Stock, less such amount as shall be necessary to cover the 50% bonus of Stock above mentioned.

* * *

[23364] (page 7)

* * *

The money would be required one-half this year, and one-half next year. The general proposition of Stock would be a 50% bonus of Stock with the Bonds, and I propose to take $500,000 of Stock myself. This would cover my personal requirements, and one or two people on the other side, who furthered the proposition and whom I must take care of. There would be left a balance of something like $900,000 of Common Stock to be divided between your firm and Messrs. Wood and Holt.

EXHIBIT No. 207.

[23404]

* * *

NOW, THEREFORE, THIS AGREEMENT, Made this fourth day of April, one thousand nine hundred and four, between GEORGE B. WILLSON and WILLIAM F. BEYER, all of the County of Lancaster, State of Pennsylvania, parties of the first part, and DR. CARY T. HUTCHINSON of the City of New York, party of the second part, WITNESSETH as follows:

1. The parties of the first part in consideration of the sum of One Dollar ($1.00), receipt of which is hereby acknowledged, and other valuable considerations, DO HEREBY give, grant, bargain and sell unto the party of the second part, DR. CARY T. HUTCHINSON, of the City of New York, his heirs and assigns, executors, and administrators and nominees, the exclusive option, right and privilege to purchase on or before January 1st, 1906, for the sum of One hundred fifty-five thousand five hundred ($155,500.) Dollars all the real estate which they, the said George B. Willson and William F. Beyer, [23405] (page 3) parties of the first part, have acquired, and the necessary flowage rights and releases of damages incident to the development of water power on the Susquehanna River near York Furnace, Pennsylvania, being all the real estate that will be affected by the damming of the river across Duncan's Island to the elevation of one hundred and sixty (160) feet above tide water as set forth in memorandum of real estate, releases, &c., hereto annexed and marked Exhibit "A".

ESTIMATES

for

McCALL FERRY PLANT

With Permanent Structures for 75,000 Horse-Power and Equipment for 52,500 Horse-Power

---

December 18, 1905

[23415] (Page 2)

COST OF CONSTRUCTION

of Hydro-Electric Plant at McCall Ferry, with Dam at Elevation 185 feet and Power-house large enough to contain 10 Generating Units with a Capacity to Deliver 75,000 Horse-power, but with Equipment for 7 Units Only, having a Capacity to Deliver 52,500 Horse-power, the Plant being so Constructed that the Other 3 Units can be added at any time.

SUMMARY OF COSTS

1	Dam, Power-house Sub-structure, Raftway, Embankment, including Masonry up to Elevation of Power-house Floor		$2,500,000
2	Buildings		200,000
3	Hydraulic Equipment		275,000
4	Electric Equipment		875,000
5	Transmission Lines to Havre de Grace and Baltimore, with Circuits to deliver one-half of the power to each place		300,000
	Sum		$4,150,000
6	Unclassified and Engineering		415,000
7	Elevation of Tracks of Columbia and Port Deposit Railroad		1,250,000
8	Property, Property Damages and Right-of-way:—		
	McCall Purchase	$750,000	
	Peach Bottom Purchase	425,000	
	Wittmer Purchase	45,000	
	Sundry Small Purchases	15,000	
	Property on Conestoga Creek (estimated)	50,000	
	Damage to Water Plant at Safe Harbor (estimated)	50,000	
	Right-of-way to Baltimore and Havre de Grace	65,000	
	Right-of-way for Railroad	100,000	
			1,500,000
9	Administration		200,000
	Sum		7,515,000
10	Interest during Construction		750,000
	Total		8,265,000

Per Delivered Horse-Power $157

[23416] (page 3)

This leaves a balance of $735,000, from the sale of $10,000,000 bonds @ 90 which is more than enough to pay for the additional three units to make up the total of 75,000 Horse-power.

ANNUAL CHARGES

Interest, 5% on $10,000,000	$ 500,000
Sinking Fund	165,000
All Operating Expenses	250,000
Total	915,000
Income, 52,500 horse-power at $25	1,315,000
Surplus	400,000

This surplus is applicable to the payment of dividends on stock, and would leave $150,000 for the common stock after the payment of $250,000 dividend on preferred stock.

This assumes the delivery of power half to Havre de Grace and half to Baltimore; to deliver one-half to Philadelphia will cost $300,000 more than to deliver it to Havre de Grace.

Office of the Chief Engineer.

Room 2407, Sixty Wall Street.

New York City

October 3, 1906.

J. W. Kirkland, Esq.
Vice-President and General Manager
McCall Ferry Power Company
60 Wall Street
New York, N. Y.

Dear Sir:—

Referring to your letter of Oct. 3rd, the item headed "Fixed Charges" in Mr. Parsons' report, is made up as follows:

Kerbaugh Contract	$1,250,000
Pennsylvania Railroad Right of Way	180,000
Lands Originally Purchased	1,320,000
Removal of Highways	110,000
Right of Way for Pole Line	180,000
Miscellaneous	100,000
Total	$3,140,000

The details of the item of $1,320,000 is made up as follows:

Original Purchase	$ 750,000
Peach Bottom Purchase	425,000
Witmer Purchase	45,000
Sundry Small Purchases	100,000
Total	$1,320,000

EXHIBIT No. 232.

[23565]

IN THE
UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MARYLAND

IN EQUITY.

PENNSYLVANIA WATER & POWER COMPANY,
A BODY CORPORATE,

v.

THE SUSQUEHANNA POWER COMPANY,
A BODY CORPORATE.

To the Honorable, the Judge of the United States District Court for the District of Maryland:

Pennsylvania Water & Power Company, a body corporate, brings this its bill of complaint against The Susquehanna Power Company, a body corporate, and complaining says:

1. Your orator, Pennsylvania Water & Power Company, is a corporation duly incorporated under the laws of the State of Pennsylvania and is a citizen and a resident of the State of Pennsylvania. The defendant, The Susquehanna Power Company, is a corporation duly incorporated under the laws of the State of Maryland and is a citizen and a resident of [23566] (page 2) the State of Maryland. This is a suit of a civil nature in equity between citizens of different states and the matter in controversy exceeds, exclusive of interest and costs, the sum of three thousand dollars.

2. Your orator is the owner of a large dam and power house in, across and by the Susquehanna River in the

vicinity of McCalls Ferry in Martic Township, Lancaster County, and Lower Chanceford Township, York County, State of Pennsylvania. The erection of said dam and power house was begun by McCall Ferry Power Company, a Pennsylvania corporation, (hereinafter called "McCall Company") and was completed by your orator. Your orator succeeded, through certain foreclosure proceedings hereinafter mentioned, to all the property, rights and franchises of the McCall Company. Said dam and power house were erected for the purpose of developing electric current and power for sale to such persons, partnerships and corporations as might desire to purchase the same. The dam and the first unit of the power plant were completed and the generation of the electric current at said plant and the transmission thereof was begun by your orator on October 14, 1910. Ever since October 14, 1910, your orator has been engaged in generating electricity at said dam and plant and transmitting and selling the same to purchasers [23567] (page 3) in the States of Pennsylvania and Maryland. Said dam is located at the town of Holtwood about half a mile below McCalls Ferry and about ten miles up the river from the Maryland state line. The tailrace of your orator's dam extends over seven thousand feet below the dam itself to the foot of Cully's Falls in the channel in the northeastern side of the bed of the river along the left bank thereof. In connection with the ownership, use and operation of its dam and plant your orator is the owner in fee simple of sundry pieces or parcels of land on both sides of the Susquehanna River and of islands and land under water in said river at, above and below its dam and power house in the Counties of Lancaster and York, in the State of Pennsylvania, and is also the owner of sundry rights of flowage and other riparian rights and other easements, privileges, interests in real property and other properties and rights at, above and below its dam in the counties aforesaid. Among the lands so owned by your orator in fee simple are the lands on both sides of the Susquehanna

River where your orator's dam is located, Fry Island, on which part of your orator's dam is located, Piney Island, Barclay Island and Grave Island, which are below your orator's dam but not below the tailrace of said dam, and also all the land on the left bank of the Susquehanna River extending from your orator's dam to the end of the tailrace of said dam at the foot of Cully's Falls, as well as land on said left bank below the foot of Cully's Falls.

[23568] (page 4)

3. The McCall Company was incorporated by the merger and consolidation of Hillside Water and Power Company and Susquehanna Water and Power Company, two Pennsylvania corporations, by a joint agreement for merger and consolidation dated April 1, 1905, and the issuance of letters patent dated April 14, 1905, recorded among the Lancaster County records in Charter Book No. 2, page 435, and among the York County records in Record Book 14 F, page 579.

Hillside Water and Power Company was incorporated by letters patent issued on September 2, 1902, and a certificate of incorporation recorded in the office of the Secretary of the Commonwealth in Charter Book No. 71, page 49, and in the office for the recording of deeds in York County in Record Book No. 12 J, page 337, for the purpose of "the storage and transportation of water and water power for commercial and maufacturing purposes in Lower Chanceford Township, York County, Pennsylvania, and the supply of the same to the public and to such persons, partnerships and corporations residing therein as may desire the same; and in order that the water and water power may be supplied to the public to the best advantage in furtherance of its corporate purposes, the development by the use of the same of electric current and power to the public, individuals, firms and corporations at any place or places at such prices as may be agreed upon."

[23569] (page 5)

Susquehanna Water and Power Company was incorporated by letters patent issued on September 2, 1902, and a certificate of incorporation recorded in the office of the Secretary of the Commonwealth in Charter Book No. 71, page 48, and in the office for the recording of deeds in Lancaster County in Charter Book No. 2, page 261, for the same purpose, except that the place mentioned was Martic Township, Lancaster County, instead of Lower Chanceford Township, York County.

4. The McCall Company to secure the payment of the principal and interest of an authorized issue of ten million dollars ($10,000,000) principal amount of its bonds executed a certain mortgage dated June 15, 1905, to Knickerbocker Trust Company, a New York corporation, as Trustee, covering all those pieces or parcels of land and of land under water and all those rights of flowage and other riparian rights and all those easements, privileges, interests in real property and other properties and rights in the Counties of Lancaster and York, in the State of Pennsylvania, and the Counties of Harford and Cecil, in the State of Maryland, particularly described in said mortgage or deed of trust and also the several capital stocks and shares thereof described in said mortgage or deed of trust and also the property described in paragraph Seventh of the granting clause of said mortgage, to wit; all patents, inventions, rights or [23570] (page 6) titles in or to patents or inventions, rights to use patented devices, machines, articles or processes, all trade-marks, trade-names and rights to use trade-marks or trade-names, all other land, land under water, water, water rights, water powers, easements, rights to flood lands, real property of every kind and all interests or rights therein, all structures, power plants, hydro-electric works, buildings, dams, raceways, canals, pole lines, transmission lines, fixtures, machinery, appliances, apparatus, equipment and tools, all rights, privileges and franchises

and all other shares of stock in any incorporated company, then owned or which should thereafter be acquired by the McCall Company; it being the intent of said mortgage to convey not only the property therein specifically described but also all other property of the McCall Company of the character mentioned in said paragraph Seventh of the granting clause thereof whether then owned or thereafter acquired.

5. Said mortgage or deed of trust was duly executed, acknowledged and recorded, bonds were duly issued thereunder and secured thereby and, defaults having been made by the McCall Company in the payment of interest and principal of said bonds, said mortgage or deed of trust was duly foreclosed by proceedings in the Circuit Court of the United States for the Eastern District of Pennsylvania instituted by Knickerbocker Trust Company, Trustee as aforesaid, and [23571] (page 7) ancillary proceedings in the Circuit Court of the United States for the Southern District of New York and the Circuit Court of the United States for the District of Maryland, which foreclosure proceedings resulted in a decree of foreclosure and sale in the Circuit Court of the United States for the Eastern District of Pennsylvania dated October 12, 1909, and ancillary decrees in the Circuit Court of the United States for the Southern District of New York dated October 15, 1909, and in the Circuit Court of the United States for the District of Maryland dated October 20, 1909, pursuant to which decree all the property, both real and personal, then owned by the McCall Company, wheresoever situated and every part and parcel thereof, including the property particularly described in said decrees as subject to the lien of said mortgage or deed of trust, was sold together as an entirety by Henry P. Brown, Esq., Special Master, to William M. Barnum, and was conveyed by said Henry P. Brown, as Special Master, to William M. Barnum by a deed dated January 13, 1910, and was also successively conveyed by two deeds of the same date, viz., January 13, 1910, the first from said

William M. Barnum and wife to William M. Barnum and others for and on account of whom said property had been purchased by said William M. Barnum, the second from said William M. Barnum and others to your orator, said William M. Barnum and others under the laws of the State of [23572] (page 8) Pennsylvania having become constituted a body politic and corporate and having after due publication of notice organized such corporation, to wit, your orator, in the manner by law provided and having adopted the corporate name of Pennsylvania Water & Power Company therefor. Said mortgage or deed of trust was duly recorded in the office for recording of deeds in and for Lancaster County, State of Pennsylvania, in Mortgage Book 108, page 77, in the office for recording of deeds in and for York County, State of Pennsylvania, in Record Book 5A, page 20, among the Mortgage Records of Cecil County, State of Maryland, in Liber M. D. No. 3, folio 338, and among the Land Records of Harford County, State of Maryland, in Liber W. S. F. No. 116, folio 328. The three last mentioned deeds, viz., from Henry P. Brown, Esq., Special Master, to William M. Barnum, from William M. Barnum and wife to William M. Barnum and others, and from William M. Barnum and others to your orator, were each duly recorded in the office for recording of deeds in and for Lancaster County, State of Pennsylvania, in Record Book Z, Vol. 19, page 202, Record Book A, Vol. 20, page 120, and Record Book Y, Vol. 19, page 506, respectively, and in the office for recording of deeds in and for York County, State of Pennsylvania, in Record Book 16 Y, page 91, Record Book 16 O, page 662, and Record Book 16 O, page 664, respectively. Copies of said mortgage or deed of trust and said three deeds are filed herewith marked respectively [23573] (page 9) "Plaintiff's Exhibits Nos. 1, 2, 3 and 4."

6. The defendant, The Susquehanna Power Company, claims to have succeeded in the year 1919 through foreclosure proceedings to the property, rights and franchises

of Susquehanna Power Company, a Maryland corporation, hereinafter called "Susquehanna Company".

7. Before proceedings for foreclosure of the mortgage or deed of trust of the McCall Company were begun and before default had been made by McCall Company under said mortgage the McCall Company conveyed and Knickerbocker Trust Company, Trustee as aforesaid, released from the lien of said mortgage in accordance with the provisions thereof by two deeds each dated August 11, 1908, upon the conditions stated in said deeds (1) to Sowego Water & Power Company, hereinafter called "Sowego Company", a Pennsylvania corporation, by one of said deeds the property, privileges and rights, real, personal and mixed, and all and singular the rights, titles, interests, and estates in law or in equity of the McCall Company and the Trustee and of either of them in, near, by or along the Susquehanna River in the Counties of York and Lancaster, in the State of Pennsylvania, lying below the foot of Cully's Falls and more particularly described in said deed, and (2) by the other of said deeds to the Susquehanna Company the property of the McCall Company in Maryland more particularly described in said deed. [23574] (page 10) Simultaneously with the execution and delivery of the two last mentioned deeds the McCall Company acquired, so as to pass under the lien of its mortgage or deed of trust and so as to be held thereunder in like manner as other property conveyed thereby, by two quit-claim deeds to it each dated August 7, 1908, one from the Susquehanna Company and Sowego Company, the other from Susquehanna Electric Power Company, a Maryland corporation, all the right, title and interest of said three last mentioned corporations respectively to the real property, franchises, interests, flowage rights and easements on, along, near, in or by the Susquehanna River in the State of Pennsylvania above the foot of Cully's Falls. Said deed to Sowego Company and said quit-claim deeds to the McCall Company from the Susquehanna Company and Sowego Company and to the McCall Com-

pany from Susquehanna Electric Power Company were each duly recorded in the office for recording of deeds in and for Lancaster County, State of Pennsylvania, in Record Book N, Volume 19, page 377, etc., Record Book O, Volume 19, page 286, etc., and Record Book N, Volume 19, page 332, etc., respectively, and in the office for recording of deeds in and for York County, State of Pennsylvania, in Record Book 16 I, page 416, Record Book 16 J, page 648, and Record Book 16 J, page 647, respectively. Said deed to the Susquehanna Company was duly recorded among the Land Records of Cecil County, State of Maryland, in Liber M. D., No. 8, Folio 339, and [23575] (page 11) among the Land Records of Harford County, in Liber W. S. F., No. 125, Folio 362. Copies of said two deeds from the McCall Company and said two quit-claim deeds to the McCall Company are filed herewith marked "Plaintiff's Exhibits Nos. 5, 6, 7, and 8," respectively.

8. In the aforesaid deed from the McCall Company and Knickerbocker Trust Company, Trustee, to Sowego Company, it is recited, among other things, that it appears to the Trustee that a release from the lien of the aforesaid mortgage or deed of trust of the properties in said deed described and of the properties described in the deed from the McCall Company and the Trustee to the Susquehanna Company conveying properties in Maryland bearing the same date as said deed is desirable in the conduct of the business of the McCall Company and that the McCall Company acquires simultaneously so as to pass under the lien of said mortgage or deed of trust and so as to be held thereunder in like manner as other property conveyed thereby property to an amount equal in value to the property released by said deed and by said conveyance to the Susquehanna Company, including the right, title and interest in the real property, franchises, interests, flowage rights and easements in the Susquehanna River above the foot of Cully's Falls quit-claimed and released by the Susquehanna Company and Sowego Company and by the Susquehanna

Electric Power Company [23576] (page 12) respectively, and that the Trustee accordingly joins in the execution of said deed for the purpose of releasing the properties therein described from the lien of said mortgage or deed of trust. The aforesaid deed from the McCall Company and Knickerbocker Trust Company, Trustee, to the Susquehanna Company contains recitals to the same effect and, *mutatis mutandis*, in the same words.

The properties conveyed and released by and particularly described in the aforesaid deed to Sowego Company include:

> Those more particularly referred to and described in the deeds and instruments mentioned in the following sub-divisions of paragraph First of the granting clause of the mortgage or deed of trust, viz.
>
> (a) 16 specified sub-divisions in which are mentioned deeds of certain pieces or parcels of land (subject as to two of said 16 sub-divisions to certain grants or leases not now material).
>
> (b) "So much of the undivided one-half interest described in Subdivision 40 (A. Randolph Kilgore property) as lies below the foot of Cully's Falls."
>
> (c) "So much of the property described in Subdivision 65 (William Sweigart property) as lies between the river and the right of way of the Columbia and Port Deposit Railroad, as located, constructed and operated prior to 1907. Also the right to flow and flood [23577] (page 13) water over, and utilize for water-power purposes, the balance of the property described in said Subdivision 65, by the erection and operation of a dam or dams having a crest elevation of not exceeding 100 feet above mean sea level."
>
> (d) "Subdivision 71, consent and release of and from the Susquehanna Canal & Power Com-

pany, and Subdivision 72, consent and release of and from the Tidewater and Susquehanna River Railroad Company, in so far only as the said consents and releases relate to lands, right and franchises below the foot of Cully's Falls, expresly reserving to the McCall Company and the Trustee the benefit and advantage of said consents and releases in so far as the same relate to lands, rights and franchises above the foot of Cully's Falls; and the McCall Company does hereby authorize the Sowego Company, its successors and assigns, to construct, maintain and operate a dam or dams, and water-power plant or plants and appurtenances at any point or points upon the Susquehanna River below the foot of Cully's Falls."

"Together with the following described property, privileges and rights not specifically described in said deed of trust or mortgage ,which are or may be covered and [23578] (page 14) included by the terms and provisions of paragraph 'Seventh' of the description of property contained in said deed of trust and mortgage, that is to say:

(1) The right to flow and flood water over, and acquire for water-power purposes, by the erection and operation of a dam or dams having a crest elevation of not exceeding 100 feet above mean sea level, so much of the following described parcel of land as lies below the foot of Cully's Falls, that is to say: That certain parcel of land in Martic Township, Lancaster County, conveyed by Amer Kline and wife to Cary T. Hutchinson by deed dated the 28th day of April, 1905, recorded in the Land Records of Lancaster County in Deed Book X, No. 17, at page 416, and conveyed by Cary T. Hutchinson to the McCall Company by deed dated the 6th day of August, 1908, subject to a grant to

the Chanceford Telephone Company of an easement to maintain a telephone line, executed the 29th day of January, 1908.

(2) All those certain pieces or parcels of land in Lancaster County, conveyed to McCall Company by John W. Kephart and wife by deed, dated the 20th day of November, 1907, recorded in the Land Records of Lancaster County, in Deed Book Y, Volume 18, page 572.

(3) Such rights of flowage and water-power as have been, or are about to be, conveyed to the [23579] (page 15) McCall Company, or upon its order or direction by the Columbia & Port Deposit Railway Company, and the Philadelphia, Baltimore & Washington Railroad Company on, near, or by the Susquehanna River between the foot of Cully's Falls and the Pennsylvania and Maryland State Line.

Together with all other property, privileges and rights, real, personal or mixed, of the McCall Company, whether in its own name, or in the name of the Trustee, or in the name of any other person or corporation, situate in the State of Pennsylvania in the Counties of York and Lancaster, lying below the foot of Cully's Falls in the Susquehanna River, that is to say, between said Cully's Falls and the State line between Pennsylvania and Maryland, known as 'Mason & Dixon's Line'," (with an exception not now material) "provided and upon the condition that the Sowego Company shall not flow back upon, encroach upon or interfere with the water-power plant of the McCall Company near McCall Ferry and the tail race thereof extending to the foot of Cully's Falls."

The properties conveyed and released by and particularly described in the aforesaid deed to the Susquehanna Company include, among others:

"all the property, privileges and rights, real, personal or mixed, more particularly referred to and described in paragraphs numbered 'Second' ". (which paragraph Second includes 12 subdivisions, in 9 of which are mentioned [23580] (page 16) deed and patents for sundry pieces or parcels of land in the Counties of Harford and Cecil, in the State of Maryland), " 'Third', 'Fourth', and 'Sixth' of the description of the properties contained in said deed of trust or mortgage, and in a deed from Alexis P. Bartlett, et al, to the Trustee, dated the 7th day of August, 1905, and recorded on the 11th day of August, 1905, in the Land Records of Harford County, Maryland, in Liber W. S. F., No. 115, at folio 336, and in the Land Records of Cecil County, Maryland, in Liber M. D., No. 21, at folio 520, the assignment of the consents and releases described in subdivisions 10, 11 and 12 of said Second paragraph being in so far only as the same relate to the construction, maintenance and operation of a dam or dams and water-power plant or plants and appurtenances upon the Susquehanna River below the Pennsylvania and Maryland State Line, the benefit and advantage of said consents and releases in so far as the same relate to lands, rights and franchises above the Pennsylvania and Maryland State line being expressly reserved and excepted from this conveyance, and the McCall Company does hereby authorize the Susquehanna Company, its successors and assigns, to construct, maintain and operate a dam or dams, water-power plant or plants and appurtenances, at any point or points upon the Susquehanna River below the Pennsylvania and Maryland State line;"

"Together with all other property, privileges and [23581] (page 17) rights, real, personal and mixed, of the McCall Company, whether in its own name or in the name of the Trustee, or in the name of any other person or corporation, and situate in or relating to the

State of Maryland," (with exceptions not now material), "provided and upon the condition that the Susquehanna Company shall not flow back upon, encroach upon, or interfere with the water-power plant of the McCall Company near McCall Ferry, and the tail race thereof extending to the foot of Cully's Falls;"

9. In the decree of foreclosure and sale hereinbefore referred to the enumeration of property subject to the lien of the mortgage or deed of trust and by said decree decreed to be sold includes, among other things:

"All those pieces or parcels of land, and of land under water, and all those rights of flowage and other riparian rights, and all those easements, privileges, interests in real property, and other properties and rights in the Counties of Lancaster and York, in the State of Pennsylvania, particularly described in the following deeds to the McCall Ferry Power Company, viz.:

* * *

j. Quit-claim Deed from Susquehanna Electric Power Company, acknowledged August 7, 1908, and recorded in Lancaster County Records, in Book N, Vol. 19, page 332, and in York County Records in Book 16J, page 647.

[23582] (page 18)

k. Quit-claim Deed from" Susquehanna Company and Sowego Company, "acknowledged August 7, 1908, and recorded in Lancaster County Records, in Book O, Vol. 19, page 286, and in York County Records in Book 16J, page 648.

* * *

All the rights, benefits, properties, privileges, provisions and conditions reserved in, or acquired through or by the execution, delivery and acceptance of, the deeds from the" McCall Company and Knickerbocker

Trust Company to the Sowego Company and the Susquehanna Company "respectively, both dated August 11th, 1908."

In the deed hereinbefore mentioned from Henry P. Brown, as Special Master, to William M. Barnum the enumeration of the property thereby conveyed includes, among other things, the same items expressed in the same words just quoted from the decree of foreclosure and sale.

The deed hereinbefore mentioned from William M. Barnum and wife to William M. Barnum and others contains no particular enumeration of property but conveys "all the property, both real and personal, and the franchises of the" McCall Company "and all the property and franchises conveyed to the said William M. Barnum by the said deed" from Henry P. Brown, as Special Master. The deed from William M. Barnum and others to your orator contains no particular enumeration of property but conveys "all the property", both real and [23583] (page 19) personal, and the franchises of the" McCall Company "and all the property and franchises conveyed to the parties of the first part"

1. All the land on the left bank of the Susquehanna River extending from your orator's dam to the end of the tailrace of said dam at the foot of Cully's Falls is included among those pieces or parcels of land in the Township of Martic, in the County of Lancaster, in the State of Pennsylvania, particularly described in the following deeds (hereinafter designated by the same numbers by which they were designated in the mortgage or deed of trust of the McCall Company, the decree of foreclosure and sale and the deed from Henry P. Brown, as Special Master, and in the case of properties acquired by the McCall Company after the execution of its mortgage or deed of trust by the same letters by which they were designated in said decree of foreclosure and sale and said deed from Henry P. Brown, as Special Master) viz:

"9. Deed from Milton L. Fry and Corina J. Fry, his wife, to Cary T. Hutchinson, dated August 12, 1903, and recorded in the office for recording of deeds in and for York County, in Record Book No. 14F, page 668, on May 25, 1905, and in the office for recording of deeds in and for Lancaster County, in Deed Book G, Volume 17, page 318 &c., on October 28, 1903, conveying six (6) tracts of land in Lower Chanceford Township, York County [23584] (page 20) and Martic Township, Lancaster County, at McCall's Ferry."

The premises, property and rights described in said deed being part of the same premises, property and rights which were conveyed by Cary T. Hutchinson and Susan D. Hutchinson, his wife, to Alexis P. Bartlett and Ross A. Mackey by a certain deed dated June 16, 1905, and recorded in the office for recording of deeds in and for Lancaster County in Deed Book U, Volume 17, page 166, on June 24, 1905, and in the office for recording of deeds in and for York County in Deed Book 14J, page 43, on June 26, 1905; and being part of the same premises, property and rights subsequently conveyed by Alexis P. Bartlett and Georga P. Bartlett, his wife, and Ross A. Mackey to the McCall Company by deed dated August 7, 1905, and recorded in the office for recording of deeds in and for York County in Book 14 J, page 178, and in the office for recording of deeds in and for Lancaster County in Deed Book Z, Volume 17, page 297.

"i. Deed from Cary T. Hutchinson and wife, dated August 6, 1908, and recorded in Lancaster County Records, in Record Book I, Vol. 19, page 327, conveying the same property conveyed to said Hutchinson by Amer Kline and wife by deed dated April 28, 1905, and recorded in Lancaster County Records in Deed Book X, No. 17, page 416, situated in Martic Township, Lancaster County."

So much of the parcel of land conveyed by the deeds mentioned in this paragraph i as lies below the foot of Cully's Falls is subject to the right granted by the McCall

Company and released by Knickerbocker Trust Company, [23585] (page 21) Trustee, to the Sowego Company by the deed hereinbefore mentioned dated August 11, 1908, to flow and flood water over and acquire for water power purposes by the erection and operation of a dam or dams having a crest elevation of not exceeding 100 feet above mean sea level.

The said parcel of land was formerly subject also to the flowage rights which were granted by deed from Thomas Cully to Charles R. McConkey dated May 16, 1900, and recorded in the office for recording of deeds in and for Lancaster County in Deed Book U, Volume 16, page 112, and were successively conveyed by deed from Charles R. McConkey to Martic Water and Power Company by deed dated April 14, 1902, and recorded in the office for recording of deeds in and for Lancaster County in Deed Book U, Volume 16, page 113, deed from Martic Water & Power Company to Susquehanna Falls Power Company, dated September 2, 1902, and recorded in the office for recording of deeds in and for Lancaster County in Deed Book X, Volume 16, page 203, and deed from Susquehanna Falls Power Company to your orator dated February 10, 1925, and recorded in the office for recording of deeds in and for Lancaster County in Deed Book F, Volume 27, page 227.

"q. Deed from Cary T. Hutchinson and wife, dated April 16, 1909, and recorded in Lancaster County Records on April 23, 1909, conveying two certain tracts of land in Martic Township, Lancaster County, viz.: a certain tract containing 25.4 acres, more or less, conveyed by George G. Cully and wife to said Hutchinson by deed [23586] (page 22) dated September 27, 1905, and recorded in Lancaster County Records in Deed Book A, No. 18, page 27, and also that certain tract of land containing 35 acres, 17 perches, more or less, conveyed by Amer Kline and wife to said Hutchinson by deed dated July 27, 1905, and recorded in Lancaster

County Records in Deed Book W, No. 17, page 590, except so much thereof as was conveyed by said Hutchinson and wife to George G. Cully by deed dated November 27, 1905, and recorded in Lancaster County Records on April 10, 1909."

All of Fry Island was included among those pieces or parcels of land or of land under water particularly described in and conveyed by the deeds hereinbefore in this paragraph 10 designated 9.

All of Piney Island, Barclay Island and Grave Island were included among the pieces or parcels of land or of land under water described in and conveyed by the following deeds to the McCall Company (designated by the same letters as in the aforesaid decree of foreclosure and sale and deed from Henry P. Brown, as Special Master) viz:

"f. Deed from John J. Frick and wife, William A. Brown and wife and Louise E. Guion, dated December 17, 1906, and recorded in Lancaster County Records in Deed Book K, No. 18, page 484, conveying a certain island known as Ankrim's Island, Pine Island or Piney Island, [23587] (page 23) in Martic Township, Lancaster County.

g. Deed from Christian F. Quade and wife, dated March 28, 1907, and recorded in Lancaster County Records, in Deed Book Q, No. 18, Page 172, conveying three certain islands in Martic Township, Lancaster County, known respectively as Kilgore Island, Barclay Island and Graves Island."

All the land on the left bank of the Susquehanna River extending from your orator's dam to the end of the tail race of said dam at the foot of Cully's Falls and also all of Fry Island, Piney Island, Barclay Island and Grave Island (including so much of Fry Island as is now flooded by your orator's dam) were conveyed by the deeds hereinbefore mentioned from Henry P. Brown as Special Master, to Wil-

liam M. Barnum, and from William M. Barnum and wife to William M. Barnum and others and from William M. Barnum and others to your orator and by virtue of said conveyances are now owned by your orator in fee simple and have been continuously in the possession and occupancy of your orator ever since the conveyance thereof to your orator on January 13, 1910. So much of that parcel of land on the left bank of the Susquehanna River conveyed by Amer Kline and wife to Cary T. Hutchinson, owned by the McCall Company and mentioned in the aforesaid deed to the Sowego Company, as lies below the foot of Cully's Falls, was conveyed by the [23588] (page 24) same deeds to William M. Barnum, William M. Barnum and others and your orator and by virtue of said conveyance (and of the hereinbefore mentioned deed of flowage rights from Susquehanna Falls Power Company to your orator) is now owned by your orator in fee simple, subject only to the right granted by said deed to the Sowego Company to flow and flood water over and acquire for water-power purposes by the erection and operation of a dam or dams having a crest elevation of not exceeding 100 feet above mean sea level, and has been continuously in the possession and occupancy of your orator ever since the conveyance thereof to your orator on January 13, 1910.

11. The defendant has asserted a claim of a right, and recently announced an intention, to erect and operate near Conowingo in the State of Maryland in and across the Susquehanna River about five and one-half miles below the Pennsylvania state line a dam having a crest elevation of 103 feet above mean sea level. The erection of such a dam or of any dam in and across the Susquehanna River having a crest elevation exceeding 100 feet above mean sea level (or indeed of one having a crest elevation not exceeding 100 feet, especially if specially constructed to that end) necessarily and inevitably would flow back upon, encroach upon and interfere with your orator's water-power plant and

the tailrace thereof extending to the foot of Cully's Falls and would flood and overflow lands now [23589] (page 25) owned in fee simple and possessed by your orator on the left bank of the Susquehanna River extending from your orator's dam to the end of the tailrace thereof at the foot of Cully's Falls and also on Fry Island, Piney Island, Barclay Island and Grave Island in the Susquehanna River; and would likewise flood and overflow lands conveyed by the McCall Company and released by Knickerbocker Trust Company, Trustee, to the Sowego Company and the Susquehanna Company respectively by the deeds hereinbefore mentioned dated August 11, 1908, upon the express condition that the Sowego Company and the Susquehanna Company should not flow back upon, encroach upon or interfere with the water-power plant of the McCall Company near McCall's Ferry and the tailrace thereof extending to the foot of Cully's Falls, and would likewise flood and overflow land on the left bank of the Susquehanna River lying below the foot of Cully's Falls, conveyed by Amer Kline and wife to Cary T. Hutchinson, owned by your orator in fee simple, subject only to the right granted by the aforesaid deed to the Sowego Company to flow and flood water over and acquire for water-power purposes by the erection and operation of a dam or dams having a crest elevation of not exceeding 100 feet above mean sea level. The erection of such a dam or of any dam in and across the Susquehanna River having a crest elevation exceeding 100 feet above mean sea level therefore inevitably would flood and overflow lands owned by your orator in fee simple and would violate the express conditions [23590] (page 26) upon which other lands were conveyed by the McCall Company to the Sowego Company and the Susquehanna Company respectively, the benefit of which conditions is now vested in and owned by your orator. On August 11, 1908, the construction of your orator's dam and the tailrace thereof had not been completed but the location and plan of construction of said dam and the tailrace thereof were open

and visible and well known especially to all the parties to the two deeds dated August 11, 1908, hereinbefore mentioned. Thereafter before October 14, 1910, the construction of your orator's dam and the tailrace thereof was completed at the same location and according to the same plan of construction as was contemplated and known on August 11, 1908. Since the completion of your orator's dam and the tailrace thereof and since October 14, 1910, your orator has made certain excavations in the tailrace of said dam for the purpose of improving the operation of said dam and the tailrace thereof. These excavations represent only a part of projected improvements to said tailrace which were suspended during the war and have not yet been completed. By reason of these excavations and improvements already made the consequences to your orator of any flowing back upon, encroachment upon or interference with the tailrace of your orator's dam would be more serious in loss of power at your orator's dam than they would have been if said excavation and improvements had not been made. These consequences would be still more serious if the projected improvements are completed. The [23591] (page 27) excavations and improvements already made have not however in any way changed, nor will the completion of the projected improvements change, the location of the tailrace of your orator's dam. The fact that the tailrace of your orator's dam would be flowed back upon, encroached upon and interfered with by the erection and operation of any dam or dams having a crest elevation exceeding 100 feet above mean sea level is not due to, dependent upon or in any way affected by the excavations and improvements, made or projected, in the tailrace of your orator's dam. If said excavations and improvements had never been begun the erection of any dam or dams having a crest elevation exceeding 100 feet above mean sea level would flow back upon, encroach upon and interfere with the tailrace of your orator's dam in the same way and at the same place, viz., at and above the foot of Cully's Falls, though not to the

same extent or with the same consequences as to loss of power at the dam, as would now result since said excavations and improvements have been begun. The erection and operation of any such dam would always so flow back upon, encroach upon and interfere with the tailrace of your orator's dam at those seasons of every year when the natural elevation and rate of flow of the waters of the Susquehanna River is not, as compared with other seasons, high.

12. So far as your orator knows or has heard, the only basis asserted by the defendant for its claim of a right to erect a dam having a crest elevation of 103 feet [23592] (page 28) above mean sea level is a certain unrecorded agreement dated February 20, 1908, to which certain stockholders of the McCall Company but neither the McCall Company nor Knickerbocker Trust Company, Trustee, were parties. Your orator is advised that the defendant's construction of this unrecorded agreement is in fact and in law a misconstruction thereof but that the construction and terms of said unrecorded agreement are for obvious reasons wholly irrelevant and immaterial now and cannot change the construction, operation or effect of the two deeds of August 11, 1908, to the Sowego Company and the Susquehanna Company respectively, or of the deeds from Henry P. Brown, as Special Master, to William M. Barnum, from William M. Barnum and wife to William M. Barnum and others, and from William M. Barnum and others to your orator under which your orator now holds and owns its property and rights, including especially its dam and the tailrace thereof.

13. Several months ago the defendant made an application, which is now pending, to the Federal Power Commission for a license to authorize it, among other things, to erect a dam in and across the Susquehanna River near Conowingo having a crest elevation of 103 feet above mean sea level. Later the defendant made an application, which

is now pending, for certain authority from the Public Service Commission of Maryland and in exhibits filed with said application indicated an intention to erect a dam having a crest [23593] (page 29) elevation of 103 feet above mean sea level. Your orator promptly reminded the defendant (What the defendant long before making either of said applications had been told by your orator) that the erection of such a dam would directly interfere with and encroach upon your orator's plant by flowing back the water of the river upon the tailrace of your orator's dam at and above the foot of Cully's Falls, that this would be both an invasion of your orator's property rights and also a breach of express conditions upon which a large part of the property of the defendant and corporations allied with it is now held and that if the defendant did not abandon its apparent intention to erect such a dam your orator would promptly and in due course take appropriate legal steps to protect its rights. A conference was had on February 4, 1925, between representatives of your orator and of the defendant and interests associated with the defendant, including the Philadelphia Electric Company, which through one or more links of stock ownership and through financial and operating contracts or arrangements is to be a dominant factor in the control of the defendant, its properties and operations. At this conference the representatives of the defendant and the interests associated with the defendant stated that the defendant and the interests associated with it would and did abandon any intention (though not a claim of right) to erect a dam having a crest elevation of more than 100 feet. This statement removed all threat of invasion of your orator's rights [23594] (page 30) and all need or opportunity to protect them. After said conference the defendant filed with the Public Service Commission of Maryland a statement, of which it sent your orator a copy, which was an inadequate and, as subsequent events indicate, evasive statement of the understanding reached at said conference. To said statement

your orator made prompt written reply dated February 11, 1925, to the defendant fully setting forth your orator's position and your orator's understanding of the defendant's position as stated at said conference. To your orator's letter of February 11, 1925, the defendant has never made direct reply. More than six weeks later your orator learned of evasive statements made before the Public Service Commission of Pennsylvania on behalf of interests associated with the defendant. Whereupon your orator wrote again to the defendant and also to the Philadelphia Electric Company and to your orator's surprise some days later received a letter dated April 7, 1925, from the Philadelphia Electric Company, undertaking on behalf of the defendant virtually to repudiate the statements made on behalf of the defendant at the conference on February 4, 1925.

14. After said conference on February 4, 1925, the defendant filed with the Public Service Commission of Maryland an amended application and amended exhibits which do not affirmatively indicate an intention to erect a dam having a crest elevation exceeding 100 feet above mean sea level. The defendant made no such amendments to its [23595] (page 31) application pending before the Federal Power Commission. There is also pending before the Public Service Commission of Pennsylvania on behalf of interests associated with the defendant, including the Philadelphia Electric Company, an application in connection with which were filed engineering plans and estimates that contemplated the erection of a dam having a crest elevation of 103 feet above mean sea level. Copies of a letter to the Public Service Commission of Maryland from your orator's counsel dated February 4, 1925, a statement filed by the defendant with the Public Service Commission of Maryland on February 5, 1925, and letters from the defendant to your orator dated February 5, 1925, from your orator to the defendant dated February 11, 1925, and from your orator to the Public Service Commission of Pennsyl-

vania dated April 1, 1925, from your orator to the defendant dated April 1, 1925, from your orator to the Federal Power Commission dated April 1, 1925, from the Secretary of the Federal Power Commission to your orator dated April 4, 1925, and from the Philadelphia Electric Company to your orator dated April 7, 1925, are filed herewith marked respectively "Plaintiff's Exhibits 9, 10, 11, 12, 13, 14, 15, 16 and 17."

15. Since April 7, 1925, communications have been had, both orally and in writing, between representatives of your orator and the defendant. In the course of correspondence the Philadelphia Electric Company has stated an intention to construct a dam "with a permanent crest at [23596] (page 32) about elevation of 86 feet above mean sea level", with movable gates above, to which your orator replied that whether the crest of the dam consist of a permanent structure or movable gates, a crest elevation, permanent or temporary, of more than 100 feet would be an invasion of your orator's rights. Your orator repeatedly asked to be reassured that the defendant has no intention to erect *any* dam having a crest elevation—fixed or movable—of more than 100 feet. To your orator's last letter dated May 22, 1925, asking such reassurance no reply has been received. Copies of a letter from the Philadelphia Electric Company to your orator, dated May 1, 1925, your orator's reply, dated May 11, 1925, a letter from the Philadelphia Electric Company dated May 14, 1925, and your orator's reply, dated May 22, 1925, are filed herewith, marked respectively "Plaintiff's Exhibits Nos. 18, 19, 20 and 21". On June 26, 1925, at a hearing before the Public Service Commission of Pennsylvania, the Vice-President and Chief Engineer of the Philadelphia Electric Company testified that construction plans have been changed and that the defendant now intends to build its dam to a crest elevation, including movable gates, of 108½ feet, and to keep the water at "a fixed level of 108½ feet", with "a possibility" that is "very questionable" of coming down

"a very small amount" at times; that "the pond is now absolutely fixed at 108½" and the dam is being built to carry it at the "full 108½". When so testifying the witness attempted to belittle the [23597] (page 33) extent, but did not pretend to deny the fact, of interference by such a dam, so operated, with your orator's water-power plant and the tailrace thereof. On the contrary the witness asserted that "the maximum interference" with your orator's plant "will be at about one hundred and two feet, but that don't necessarily mean that that is going to make us maintain the pond level at one hundred and two feet". Your orator, therefore, believes and avers as a fact that the defendant intends to erect in and across the Susquehanna River, near Conowingo in the State of Maryland, a dam having a crest elevation of 108½ feet above mean sea level.

16. Your orator's dam and power-plant, including the tailrace of said dam, originally cost and are now worth millions of dollars. The value of the tailrace of your orator's dam, the value of the land owned by your orator in fee simple on the left bank of the Susquehanna River between your orator's dam and the end of the tailrace thereof at the foot of Cully's Falls which would be permanently flooded and overflowed as hereinbefore set forth by the erection by the defendant of a dam having a crest elevation exceeding 100 feet above mean sea level, the value of the land owned by your orator on the left bank of the Susquehanna River below the foot of Cully's Falls which would without right be so flooded and overflowed by such a dam, and the value of the power that would be lost in each year by your orator as a [23598] (page 34) result of flowing back upon, encroaching upon and interfering with the tailrace of its dam by the erection of such a dam each exceeds the sum of three thousand dollars. Ever since the completion of its dam and the first unit of its power plant your orator has been, and now to a greater degree than ever is, continuously utilizing, through the sale of electric energy generated thereby, the water power available to

your orator by the use of its dam and power plant, including the tailrace of its dam, and in this way utilizing and enjoying the full value of its dam and power plant and also all the lands owned by your orator on the left bank of the Susquehanna River between your orator's dam and the end of the tailrace thereof at the foot of Cully's Falls and on the islands hereinbefore mentioned in the Susquehanna River, as well as lands owned by your orator on the left bank of the Susquehanna River below the foot of Cully's Falls. The erection by the defendant of a dam having a crest elevation exceeding 100 feet above mean sea level would therefore permanently deprive your orator of the full use of its dam and power plant and especially of the tailrace of its dam and also of the use and ownership of lands owned by your orator in fee simple and would thereby cause your orator great and irreparable loss, damage and injury.

To the End, Therefore:

1. That the defendant and its officers, [23599] (page 35) agents, servants, employees, contractors, subcontractors and lessees and all persons acting under their authority may be perpetually and also preliminarily pending this suit restrained and enjoined from constructing, erecting, maintaining or operating or beginning the construction or erection of a dam or dams in or across the Susquehanna River below your orator's dam and power plant having a crest elevation, fixed or movable, exceeding 100 feet above mean sea level or any other dam or dams which will flow back upon, encroach upon or interfere with the water-power plant of your orator and the tailrace thereof extending to the foot of Cully's Falls.

2. That the construction, erection, maintenance or operation by the defendant of any dam or dams, in or across the Susquehanna River below your orator's dam and power plant, having a crest elevation, fixed or movable, exceeding

100 feet above mean sea level or any dam or dams which will flow back upon, encroach upon or interfere with the water-power plant of your orator and the tailrace thereof extending to the foot of Cully's Falls may be finally adjudged and decreed to be an unlawful invasion of the lands and vested property rights of your orator as owner of its dam and power plant, including the tailrace of its dam, and all the lands on the left bank of the Susquehanna River between your orator's dam and the end of the tailrace thereof at the foot of Cully's Falls, as well as lands on said left bank [23600] (page 36) below the foot of Cully's Falls, and all the islands hereinbefore mentioned in the Susquehanna River and all the benefit of the conditions upon which lands and flowage rights below the foot of Cully's Falls were conveyed by the two deeds hereinbefore mentioned dated August 11, 1908.

3. And that your orator may have such other and further relief in the premises as its case may require.

May It Please Your Honor to grant unto your orator the writ of subpoena directed to the defendant commanding it to be and appear in this Honorable Court on some certain day to be named therein and to answer the premises and to abide by and perform such order or decree as this Honorable Court may make in the premises.

And as in duty bound your orator will ever pray.

Keech, Deming & Carman
Haman, Cook, Chestnut & Markell
Solicitors for the Plaintiff.

March 30, 1927.

[23602]

UNITED STATES OF AMERICA
DISTRICT OF MARYLAND, TO WIT:

I, CHARLES W. ZIMMERMAN, Clerk of the District Court of the United States for the District of Maryland, do hereby certify that the aforegoing is a true copy of the Bill of Complaint, which was entered and filed on the 11th day of July, 1925, in the therein entitled case of Pennsylvania Water & Power Company, a body corporate, vs. The Susquehanna Power Company, a body corporate, No. 913 Equity Docket in said District Court.

IN TESTIMONY WHEREOF, I hereunto set my hand and affix the seal of the said District Court this 3rd day fo September, 1946.

(Seal) CHAS W. ZIMMERMANN
Clerk of the said District Court.

EXHIBIT NO. 233.

[23603]

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF MARYLAND

IN EQUITY.

PENNSYLVANIA WATER AND POWER CO.
VS
THE SUSQUEHANNA POWER COMPANY

TO THE HONORABLE, THE JUDGES OF THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MARYLAND:

The Answer of the said Defendant, The Susquehanna Power Company, to the Bill of Complaint filed in said Court by the Pennsylvania Water and Power Company, respectfully shows:

I

(a) It denies that the Complainant is a corporation duly organized under the laws of Pennsylvania.

(b) The Complainant was not duly organized under the Act of April 27th, 1909, Pennsylvania Laws, page 175 (amending the Act of May 31st, 1887, which was a supplement to the Act of April 8th, 1861), in that William M. Barnum the purchaser of the property and rights of the said McCall Company did not comply with the provisions of said Act, and title to the said property and rights of the said McCall Company has never legally passed from him.

II

It denies the matters and things set up in paragraph two of said Bill in so far as the same refer to the ownership of said dam and the lawful development of electric current and power, and the transmission thereof to others,

as well as in reference to [23604] (page 2) the ownership of the part of the land therein mentioned, and

(a) Avers that said dam, lands and rights are held

> "subject to the provisions of the decree of the Court of Common Pleas of Dauphin County, Pennsylvania, entered on the 14th of January, 1907, in a suit in equity of the Commonwealth of Pennsylvania against the McCall Ferry Power Company and others"

as will appear from said Complainant's Exhibit No. 2, and that the Commonwealth of Pennsylvania, by its Bill of Complaint in the aforesaid cause, prayed for an injunction against the construction and maintenance of said dam without adequate provision for the future navigation of the River Susquehanna by a canal from Columbia to Havre de Grace and for a declaration that certain consents and releases from the Susquehanna Canal and Power Company and from the Susquehanna and Tidewater Railroad Company to the said McCall Company, bearing dates respectively the 9th and 12th of June, 1905, be declared void, and that the mortgage from the said McCall Company to the Knickerbocker Trust Company, Trustee, be reformed; and thereafter a decree was passed in said cause whereby the construction of said dam was allowed to be continued, but subject to the conditions subsequently set out in said decree whereby, notwithstanding said dam, the navigable character of said River would be maintained and all questions as to the validity of the construction of said dam under the Acts of Assembly aforesaid were reserved; but, notwithstanding the said decree and the determination therein with reference to the navigable character and capacity of said River, the Complainant by its said dam has interfered with and now interferes with the navigable character thereof.

(b) That the Complainant has not complied with the laws of Pennsylvania, Act of June 14, 1923, Pennsylvania

Laws, page 704, and has not thereunder duly procured a limited power permit from the Water and Power Resources Board of said Commonwealth.

[23605] (page 3)

(c) That the Congress of the United States, by its Act of June 10th, 1920, (Volume 41 Stat. L. page 1063) referred to in said bill, has assumed jurisdiction over the development of hydro-electric power in and upon the navigable waters of the United States. That said Act of Congress is remedial and thereby inherently retroactive, and the Complainant was at the time of filing its Bill, and prior thereto, and is now subject to its terms and provisions and to supervision and regulation thereunder, and the Complainant has not procured from the Federal Power Commission created by said Act, the prerequisite permit and license for the maintenance of its said dam and project works on said river erected and operated as required by said Act of Congress and the regulations duly adopted by said Power Commission prior to 1920, and the Complainant has also made new construction at and in connection with its said dam and project works, without procuring from the said Commission the prerequisite permit and license therefor; and

Therefore, the Defendant says that the Complainant is without equity to maintain its said Bill of Complaint, because its said plant and project works are maintained and operated in violation of the laws of the State of Pennsylvania and in violation of the laws of the United States.

III

The Defendant denies the matters set forth in the Third Paragraph of said Bill, and requires strict proof thereof.

IV

Answering the Fourth Paragraph of said Bill, the Defendant admits that the Mortgage or Deed of Trust therein set forth was executed, delivered and recorded.

V.

The Respondent denies the averments of the Fifth Paragraph [23606] (page 4) of said Bill in manner and form as therein stated and shows that the said William M. Barnum, as the said purchaser, was alone constituted a body politic and corporate under the laws of Pennsylvania, and further denies that the Complainant was lawfully organized, and that it succeeded to the property and rights of the said McCall Company referred to in said paragraph.

VI

The Defendant admits the matters set forth in the Sixth Paragraph of said Bill.

And your Respondent avers in connection therewith as follows, that is to say:

(a) On the 27th day of January, 1923, it duly applied to the Federal Power Commission for a Preliminary Permit to construct its water plant development near Conowingo in Maryland, having a dam with a crest elevation not to exceed 110 feet above mean sea level. Due notice thereof was published as required by the Regulations under said Act of Congress of June 18th, 1920, thereby inviting objections to its said development at a public hearing. No objections were filed by said Complainant nor by any other person, and in August of 1923, your Respondent was duly granted its Permit and thereby acquired the priority of right under Federal Law, to utilize the River for its hydro-electric Project, and forthwith filed its application for a License as aforesaid under the terms stated in said Permit. The said Commission has not yet issued a License to your Respondent, and your Respondent cannot proceed with its proposed dam and project until said license is issued.

(b) And your Respondent having in all respects [23607] (page 5) complied with the Federal Law,

though its pending application for license has not yet been granted, and Complainant not having complied with said law, in any respect whatsoever cannot maintain its Bill in a Federal Court.

VII

To the Seventh Paragraph of said Bill, the Defendant admits the delivery and recording of the two deeds therein mentioned, namely to the Sowego Company, a Pennsylvania corporation, and to the Susquehanna Company, then Susquehanna Power Company, a Maryland corporation respectively as set forth in Complainant's Exhibits Nos. 5 and 6, but hereby expressly denies that the conditions inserted in the deed to said Sowego Company (Exhibit No. 5), that is to say:

"the right to flow and flood water over, and acquire for water power purposes by the erection and operation of a dam or dams having a crest elevation of not exceeding 100 feet above mean sea level, so much of the following described parcel of land as lies below the foot of Cully's Falls, that is to say: That parcel in Martic Township conveyed by Amer Kline to Carey T. Hutchinson, dated the 28th of April, 1905, and recorded in Lancaster County Deed Book X, Volume 17, page 416, and a similar condition, set forth under Paragraph Eight (c) of said Bill in respect to the William Sweigart land."

and attempted to be created by the said deed to Sowego Company, have any application to the proposed development, dam and project works of this Respondent, and Respondent shows that its rights are fixed and determined by the deed from the McCall Ferry Power Company and others to the Susquehanna Power Company, predecessor in title to the Respondent, a copy of which is filed with the Bill of Complaint marked "Exhibit No. 6", and by said deed the Respondent is authorized and empowered,

"to construct, maintain and operate a dam or dams, water power plant or plants and appurtenances at any point or points upon the Susquehanna River [23608] (page 6) below the Pennsylvania and Maryland State line . . . upon condition that the Susquehanna Company shall not flow back upon, encroach upon or interfere with the water power plant of the McCall Company near McCalls Ferry, and the tail race thereof extending to the foot of Cully's Falls".

VIII

The Respondent admits the releases of the lands described in the deeds mentioned in Paragraph Eight of said Bill of Complaint, but denies that the alleged limitations as to the height of the dam to be erected by the Respondent and referred to in said deed to said Sowego Company are in any manner binding upon this Respondent and limit its right to construct its dam, provided that it shall not flow back upon, encroach upon, or interfere with the water power plant of the McCall Company, and the tail race thereof extending to the foot of Cully's Falls as said Falls existed on February 20, 1908.

IX

The Respondent denies that the enumeration of property and rights referred to in the Ninth Paragraph of said Bill is material to the issues in this case, and also denies that the deeds enumerated in said Paragraph are effective to convey the property and rights in said Paragraph mentioned, or that said deeds are material to the issues in this case.

X

The Respondent denies that the inferences attempted to be drawn from facts set out in the Tenth Paragraph of said Bill are material to the issues in this case, or that the deeds therein mentioned from Brown and Barnum and others are effective to convey to the Complainant the property and rights therein mentioned.

XI

The Respondent denies the matters and facts alleged [23609] (page 7) in the Eleventh Paragraph of said Bill in manner and form as therein alleged, and it shows and claims as set forth in Paragraph Seven of this Answer the right

> "to construct, maintain and operate a dam or dams, water power plant or plants and appurtenances at any point or points upon the Susquehanna River below the Pennsylvania and Maryland State Line . . . upon condition that the Susquehanna Company shall not flow back upon, encroach upon or interfere with the water power plant of the McCall Company near McCall's Ferry, and the tail race thereof extending to the foot of Cully's Falls".

The Respondent avers that the said tail race at the foot of Cully's Falls was in February 1908, and prior thereto, at elevation 103 feet above mean sea level, and the Respondent claims the right to back the water to the then foot of the said Falls as provided in said deed. The Respondent denies that a dam constructed at a crest elevation of 103 feet above mean sea level would interfere with the operation of the Complainant's plant and works as therein stated.

XII

Answering the Twelfth Paragraph of said Bill, the Respondent asserts and claims that the agreement of February 20th, 1908, referred to in said Paragraph, was made and executed for the purpose of bringing about the consolidation therein set forth and explained, and for the purpose of avoiding further litigation, and that the deed of August 11th, 1908, from the McCall Company and others to Susquehanna Power Company was executed in pursuance of said agreement and in part consideration thereof. It denies that it has misconstrued said agreement and asserts that its terms are relevant and material to the con-

troversy in this case and that all claims of the Complainant to the contrary of and against said agreement are void and immaterial to the issue in this case, as by said agreement, an original of which is in possession of the Complainant, and a copy whereof should have been filed with the Bill of Complaint, will more fully appear. And Respondent files such copy as a part hereof marked "Respondent's Exhibit No. 1".

[23610] (page 8)

XIII

Answering the Thirteenth Paragraph of said Bill, the Respondent denies that it has at any time entered into an agreement with the Complainant or made any statements as set forth in said Paragraph to the effect that it would abandon its right to erect a dam having a crest elevation of more than 100 feet. It admits the memorandum filed with the Public Service Commission of Maryland, but it denies the inferences in said Paragraph attempted to be drawn of an intention of Respondent to abandon in any way its right to back the water to the said foot of Cully's Falls, as it existed February 20, 1908.

XIV

Answering the Fourteenth Paragraph of said Bill, the Respondent denies the inferences thereby attempted to be drawn from the papers therein referred to, and that it has any intention to abandon its right to back water to the foot of Cully's Falls as hereinbefore explained.

XV

Answering the Fifteenth Paragraph of said Bill, the Respondent says that various conferences between the engineers of the Complainant and the engineers of the Defendant have been had beginning in or about the autumn of 1910 or the spring of 1911, for the purpose of determining the exact elevation at the foot of Cully's Falls, to which point it was always conceded your Respondent had the

right to back water. That in view of the controversy over the height above mean sea level at the foot of Cully's Falls and for the purpose of making it possible for the Respondent to secure all of the fall to which it was lawfully entitled, the Respondent determined that instead of erecting a solid concrete dam with a crest elevation of either 103 feet above mean sea level or 100 feet above mean sea level, it would erect a solid concrete dam with a crest elevation of 86 feet above mean sea level with superimposed movable gates to be so [23611] (page 9) constructed that they could be used to maintain the level of the water at all times at an elevation lawfully permissible to the Respondent.

The Respondent denies that the testimony offered by The Philadelphia Electric Company before the Public Service Commission of Pennsylvania on June 26, 1925, or at any other day, could be truthfully paraphrased as set forth in Paragraph 15 of the Bill of Complaint, and avers that the testimony of the Chief Engineer of The Philadelphia Electric Company and the other engineers there testifying for the applicants defined the revised plans for the construction of the said dam by the Respondent as herein set forth. The revised plans, according to the said testimony and as herein asserted, provide as follows:

> "The design of the Conowingo Development in detail and as a whole, is representative of conservative practice and is based on the use of the most modern and efficient hydro-electric equipment which can be furnished by reliable manufacturers.
>
> The dam, of the gravity type, will be of mass concrete, founded on sound solid granite and the spillway section will be equipped with 50 crest gates of the Stoney type to regulate the headwater levels so as to result in non-interference with the water levels at the foot of Cully's Falls just below the Holtwood Development and limit the maximum high water level to Elev. 108.5.

Five traveling gate hoists of ample capacity and good design will be provided to insure reliable and safe operation of the crest gates under all conditions of ice and river flow. Only about half the crest gates will be required to divert the maximum flood of an average year, and about 70% of the time none of these gates will be operated as all the river flow will be required for power generation. The three smaller regulating gates equipped with individual motor operated gate hoists controlled from the power station, will be of adequate capacity to permit accurate regulation of the pond level. The crest gates will be designed to insure water tightness and an emergency gate will be provided to be lowered in front of the crest gates when required for maintenance of the gates."

The Respondent expressly denies the averment in the last sentence of paragraph 15 of said Bill of Complaint, that the Defendant intends to erect in and across the Susquehanna River near Conowingo in the State of Maryland, a dam having a crest elevation of 108.5 feet above mean sea level, if such averment is [23612] (page 10) intended to assert that the dam when erected will have a permanent elevation of 108.5 feet above mean sea level, because, as heretofore stated, the dam when erected according to the aforesaid revised plans, will have a permanent crest elevation of only 86 feet with gates as above set forth, capable of increasing from time to time the elevation of water to an elevation lawfully maintainable by this Respondent.

XVI

Answering the Sixteenth Paragraph of said Bill, the Respondent denies the averments as therein stated and denies that the end of the tail race of the Complainant at the foot of Cully's Falls, as it existed on February 20, 1908, would be flooded and overflowed, as in said Paragraph set forth, by the erection of a dam having a crest elevation of 103 feet above mean sea level.

XVII

Further answering the allegations of said Bill, your Respondent shows that the said agreement of February 20th, 1908, was known and understood by the Complainant at the time of its alleged purchase of the interest of the McCall Company, and that purchase was made subject to said agreement, and at the time said agreement was made and after said deed was executed, it was ratified and approved by the McCall Company and also by the Knickerbocker Company, Trustee, under the mortgage referred to.

Respondent further shows and avers that after the execution of said agreement of February 20th, 1908, and after the execution of said deed of August 11th, 1908, from the McCall Company and others to this Respondent, the said McCall Company without the knowledge or consent of Respondent excavated its tail race at Cully's Falls and thereby removed and obliterated the said land mark and reduced the elevation corresponding to the foot of said Falls above mean sea level as the Falls existed on February 20th, 1908, and changed the boundaries of the rights and properties conveyed by [23613] (page 11) the aforesaid deed.

XVIII

Answering generally the said Bill of Complaint, Respondent shows that the facts therein set forth do not make and constitute irreparable injury to the Complainant and therefore the Complainant is without equity to maintain its said Bill.

XIX

Further answering said Bill of Complaint, this Respondent shows that in view of the present status of the Complainant under the laws of the States of Maryland and Pennsylvania and under the Act of Congress aforesaid, and in view also of the status of this Respondent with reference to the permits and licenses required under said

laws, the said Bill of Complaint was prematurely filed and should be dismissed.

Wherefore Respondent prays that the Complainant's Bill may be dismissed with costs.

[23616]

IN THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF MARYLAND.

PENNSYLVANIA WATER & POWER COMPANY, a body corporate, vs. THE SUSQUEHANNA POWER COMPANY, a body corporate.	IN EQUITY

TO THE HONORABLE, THE JUDGE OF THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MARYLAND:

The petition of the plaintiff and the defendant respectfully shows:

1. That the plaintiff on the one part, and the defendant and certain corporations associated with it on the other part, have entered into a certain agreement dated February 20, 1926, a copy of which, marked "Exhibit Agreement", is filed herewith and to which reference is hereby made for a statement of all the terms and provisions thereof. By said agreement it is, among other things, agreed without prejudice to any of the opposing contentions of the plaintiff and the defendant [23617] in this case, or to any of their existing legal rights, that the plaintiff consents to the maintenance and operation by the defendant and its associated corporations of a certain dam and gates in a certain manner so as to flood and overflow land of the Plaintiff, this consent however being expressly conditioned upon performance of certain provisions, covenants and conditions contained in said agreement. Said agreement is to continue in force for a term of fifty years and to be renewable

from time to time forever at the option of the defendant and its associated corporations.

2. Said agreement, by its terms, is subject to the approval of the Public Service Commission of Pennsylvania, so far as required by law, and is to become effective when so approved by said Commission. Said agreement has been so approved by said Commission by a certain report and order and certificate of public convenience, both dated November 22, 1926, a certified copy of which is filed herewith marked "Exhibit Pennsylvania Public Service Commission".

3. By said agreement it is provided that a copy of said agreement shall be filed in this case, and [23618] the plaintiff and the defendant shall unite in asking an order staying further proceedings in this case but retaining jurisdiction in the premises, without prejudice.

WHEREFORE, your petitioners, the plaintiff and the defendant herein, hereby unite in praying the passage of an order staying further proceedings in this cause but retaining jurisdiction in the premises, without prejudice.

And as in duty bound, your petitioners will ever pray.

PENNSYLVANIA WATER & POWER COMPANY, a body corporate,

vs.

SUSQUEHANNA POWER COMPANY, a body corporate.

IN EQUITY

Upon the petition, with exhibits and affidavits, of the plaintiff and the defendant in the above entitled cause, it is this 4th day of January, 1927, by the United States District Court for the District of Maryland in equity ORDERED that further proceedings in said cause are hereby stayed but jurisdiction in the premises is hereby retained, without prejudice.

MORRIS A. SOPER
District Judge

UNITED STATES OF AMERICA
DISTRICT OF MARYLAND, TO WIT:

I, CHARLES W. ZIMMERMAN, Clerk of the District Court of the United States for the District of Maryland, do hereby certify that the aforegoing is a true copy [23622] of the Petition of the Plaintiff and the Defendant and Order thereon staying further proceedings which was entered and filed on the 4th day of January, 1927 in the case of PENNSYLVANIA WATER & POWER COMPANY, a body corporate vs. SUSQUEHANNA POWER COMPANY, a body corporate No. 913 Equity in said District Court.

IN TESTIMONY WHEREOF, I hereunto set my hand and affix the seal of the said District Court, this 3rd day of September, 1946.

(Seal)

CHAS. W. ZIMMERMAN.
Clerk of the Said District Court

EXHIBIT NO. 235.

[23624]

AGREEMENT made as of the 20th day of February, 1926, between Pennsylvania Water & Power Company, a Pennsylvania corporation, hereinafter called "Holtwood Company", party of the first part, and The Susquehanna Power Company and The Susquehanna Electric Company, both Maryland corporations, and Philadelphia Electric Power Company, a Pennsylvania corporation, hereinafter sometimes called "Conowingo Companies", parties of the second part.

Each, any and/or all of the parties of the second part are hereinafter referred to jointly and severally as "Conowingo Companies", which term designates the singular as well as the plural number.

Holtwood Company owns and operates a hydro-electric plant on the Susquehanna River at Holtwood, Pennsylvania, the tailrace thereof extending downstream to the foot of Cully's Falls, and in connection with said plant owns certain lands on the Susquehanna River above the foot of Cully's Falls and, subject to limited flowage rights, below the foot of Cully's Falls. Conowingo Companies own certain lands and flowage rights on the Susquehanna River in Maryland and Pennsylvania extending upstream to the foot of Cully's Falls, and one of said Conowingo Companies, to wit, Philadelphia Electric Power Company, claims to own lands and islands above the foot of Cully's Falls, and together said Conowingo Companies propose to construct and operate a hydro-electric plant, known as the Conowingo Development, on said river, near Conowingo, Maryland.

In the interest of overall economy and conservation of natural resources it is desirable to utilize to the maximum the head of water between Holtwood Company's forebay and Conowingo Companies' tailrace. By tailrace improvements or additions Holtwood Company claims that it could

largely utilize the present head of water between Holtwood Company's tailbay and the foot of Cully's Falls. Careful studies by both Holtwood Company and Conowingo Companies, however, have shown that the total head between Holtwood Company's forebay and Conowingo Companies' tailrace can be most economically developed by Conowingo Companies maintaining the Conowingo pond elevation at not to exceed 108.5 feet above mean sea level, thereby backing water into Holtwood Company's tailrace with consequent gain to Conowingo Companies and loss to Holtwood Company. Holtwood Company estimates that its average annual loss in energy output and demand value, with its existing power house and generating units and its tailrace in its present condition, will be seventy-two thousand dollars ($72,000), and there will also be other losses which have not been evaluated. Conowingo Companies estimate that their average annual gain in energy output alone from the operation of seven units of their plant will be one hundred and ninety-five thousand five hundred dollars ($195,500).

Holtwood Company contends that Conowingo Companies without the consent of Holtwood Company have no right either (a) to back water or raise the water level under any condition of flow in the Susquehanna River at the foot of Cully's Falls, or (b) to build a dam, whether fixed or movable, with an elevation exceeding one hundred feet above mean sea level, and (c) that the foot of Cully's Falls is a line across the Susquehanna River located as shown, (designated AB), on the map, marked Exhibit No. 1, attached to and made a part hereof and that this line approximately passes through the point at which was located the "No. 5 Gauge" or "Cully's Falls Gauge" of McCall Ferry Power Company. Conowingo Companies dispute Holtwood Company's contention and contend (a) that, without the consent of Holtwood Company, they have the right to build any dam with or without gates which will not back water upon the tailrace of Holtwood Company at the foot of Cully's Falls and (b) Conowingo Companies

agree with Holtwood Company that the foot of Cully's Falls is a line across the Susquehanna River located as shown by said [23625] line AB on said map, Exhibit No. 1, except as to that part or portions of said line AB which lie between any two successive intersections of the one hundred three feet elevation contour line on the bed of said Susquehanna River when said contour line crosses said line AB and continues upstream and back again to intersect said line AB, which said part or portions of said line AB Conowingo Companies contend do not truly or correctly designate the foot of Cully's Falls, and Conowingo Companies contend that between each of said two successive points of intersection along the line AB the true location of said foot of Cully's Falls is a line which leaves said line AB and continuously follows the meanders, windings and turnings of said one hundred three feet elevation contour line upstream, across-stream and downstream until it again intersects said line AB, and (c) Conowingo Companies contend that Holtwood Company is without right to maintain its tailrace to the foot of Cully's Falls for the reason that by so doing it is unlawfully diverting, changing and diminishing the natural and normal flow of the said Susquehanna River from and with respect to the lands and islands above the foot of Cully's Falls owned by one of said Conowingo Companies, to wit, Philadelphia Electric Power Company. Other opposing contentions of Holtwood Company and Conowingo Companies are stated or referred to in the bill and answer in a case brought by Pennsylvania Water & Power Company against The Susquehanna Power Company and now pending in the United States District Court for the District of Maryland in equity, which case is designated in said Court as Serial No. 913 Equity and is referred to in Equity Docket No. 10 Folio 13 etc.

Holtwood Company and Conowingo Companies, without prejudice to any of their opposing contentions hereinbefore or in the aforesaid equity case stated or referred to, or to any of their existing legal rights, have reached an

agreement upon the terms and conditions hereinafter set forth.

NOW, THEREFORE, THIS AGREEMENT WITNESSETH that in consideration of the premises and of the mutual covenants, agreements and conditions herein contained and of the sum of one dollar ($1) by each party or parties to the other party or parties in hand paid, receipt whereof is hereby acknowledged, the parties hereto do hereby covenant and agree, each for itself, its successors and assigns, with the others, their successors and assigns, Conowingo Companies covenanting jointly and severally, as follows:

1. All elevations mentioned herein are expressed in feet above mean sea level. Mean sea level is agreed to be 187.754 feet below the benchmark of the United States Geological Survey referred to on page 41 of Bulletin 515 of the United States Geological Survey and there described as "McCall Ferry, 400 feet west of station, highway bridge over Kelley's Run, west abutment, north side, top of parapet wall; aluminum tablet stamped '188' ", this being the datum for the gauge heights used in the engineering studies leading up to this agreement.

2. Conowingo pond elevation or pond level means the elevation of the water surface of the pond above Conowingo Companies' dam at a point on the west shore of said pond approximately one thousand feet up-stream from the face of the dam. Conowingo Companies shall install and maintain on the west shore of said pond in the vicinity of said point a pond level recording gauge of a type and in a location satisfactory to both parties so that the gauge will accurately record the above defined Conowingo pond elevation. Conowingo Companies shall furnish Holtwood Company the gauge records of the pond elevations. Holtwood Company shall have the right to inspect such gauge and, jointly with Conowingo Companies, to check the accuracy of the gauge. Conowingo Companies shall also install and maintain all necessary instruments and shall keep the

necessary records, subject to inspection by Holtwood Company, so that all computations required under paragraph 7 hereof may be accurately made.

3. Holtwood Company hereby consents to the building by Conowingo Companies of a dam at any point on the Susquehanna River below Holtwood Company's property with permanent spillway crest at an elevation not exceeding one hundred feet, surmounted by a movable dam or gates capable of maintaining the Conowingo pond elevation at not exceeding 108.5 feet in any event, but [23626] Holtwood Company does not consent that such dam shall or may be maintained or operated except upon the express conditions hereinafter set forth.

4. Holtwood Company hereby consents to the maintenance and operation by Conowingo Companies of said dam and the movable gates thereon so as to maintain the Conowingo pond elevation at not exceeding 108.5 feet, and thereby to flood and overflow land of Holtwood Company. This consent of Holtwood Company, however, is expressly conditioned upon performance by Conowingo Companies, their respective successors and assigns, of all the provisions, covenants and conditions as to payments or otherwise contained in the succeeding paragraphs hereof numbered 6 to 9, both inclusive. Immediately upon default by Conowingo Companies, their respective successors or assigns, in the performance of any of the provisions, covenants and conditions in said paragraphs contained and the continuance of such default for thirty days after written notice from Holtwood Company, its successors or assigns, all consent granted hereunder so to maintain and operate said dam and gates or to flood and overflow Holtwood Company's land shall *ipso facto* be withdrawn, and thereafter Conowingo Companies, their respective successors and assigns, shall have no right whatever to maintain or operate said dam and gates except those rights which Conowingo Companies or any of them would now have if this agreement

had not been executed, as hereinafter in paragraph 5 hereof expressly provided, unless and until any and all such defaults shall be cured by performance of all the provisions, covenants and conditions in said paragraphs 6 to 9 contained, including payment of all sums in default, with interest, and payment of all damages sustained by Holtwood Company, its successors and assigns, by reason of any such default. If and when any and all such defaults shall be so cured, then the consent granted hereunder to maintain and operate said dam and gates and the consent to flood and overflow Holtwood Company's land pursuant to this paragraph 4 shall revive, subject, however, to all the same conditions herein stated. All the provisions, covenants and agreements in this paragraph 4 contained or referred to, including all those contained in paragraphs 6 to 9, both inclusive, are and shall be covenants running with the land, and as such shall bind and inure to the benefit of all present and future owners of any interest in Conowingo Companies' dam or plant, and shall bind and inure to the benefit of all present and future owners of any interest in Holtwood Company's plant or lands.

5. Immediately upon any suspension or termination, by breach of condition, of the consent to maintain and operate said dam and gates pursuant to paragraph 4 hereof or upon the expiration or any other termination of this agreement, Conowingo Companies, their respective successors and assigns, shall have no right, without the consent of Holtwood Company, its successors and assigns, to maintain or operate said dam or gates except such rights (whether admitted or disputed by Holtwood Company) as Conowingo Companies now possess, in law and in fact, independently of any provision of this agreement, and thereupon Holtwood Company, its successors and assigns, shall have all the same rights (whether admitted or disputed by Conowingo Companies) and all the same remedies against Conowingo Companies, their respective successors and assigns, which it would now have if this agreement had never

been executed and said dam and gates had never been built, including the same right, if any, to prevent the continued maintenance and compel the removal of said dam or gates or any part thereof as Holtwood Company would now have in law or in fact to prevent the building of such dam or gates or any part thereof. No breach of condition or consequent suspension or termination of rights under paragraph 4 hereof on the part of Conowingo Companies, their respective successors or assigns, shall release Conowingo Companies, their respective successors or assigns, from the obligation to make any of the payments hereinafter provided for, but all such payments shall be made regardless of any such suspension or termination of rights.

6. In payment for and as an express condition of the consents and privileges granted to Conowingo Companies under this agreement, Conowingo Companies shall pay Holtwood Company the following amounts, to be computed and paid from and after the first day when the Conowingo Development starts operation by the generation of electricity for transmission:

(a) As compensation for Holtwood Company's loss in energy output and demand value of its plant, seventy-two thousand dollars ($72,000) per annum.

[23627]

(b) As Holtwood Company's participation in Conowingo Companies' gain, as compensation for other losses by Holtwood Company, the following amounts per annum for the following years, *i. e.*, full years of twelve months each, whether calendar years or not, respectively, viz:

For the first year,	$15,000.
For the second year,	$40,000.
For the third year,	$55,000.
For the fourth year,	$60,000.
For each year thereafter,	$61,750.

The aggregate of the sums mentioned as payments per annum in (a) and (b) shall be the only amount payable hereunder by Conowingo Companies in any one year, excepting, however, such additional payments as may become due for the reason and to the extent provided in paragraph 7 of this Agreement.

All payments hereunder shall be made in equal quarterly instalments on or before the fifteenth day of January, April, July and October for the preceding quarter ending on the last day of December, March, June and September respectively, or in case of the first payment in an instalment proportionate to the portion of the preceding quarter from and after the beginning from which payments are computed. Conowingo Companies shall not raise the Conowingo pond elevation above 100 feet before starting the operation of the Conowingo Development by the generation of electricity for transmission.

(c) In the event that on account of diversion of water from the Susquehanna River for Federal, State or municipal purposes the gross Conowingo gain obtainable from seven or more units operating under this agreement in an average flow year, computed in the same manner as the amount one hundred ninety-five thousand, five hundred dollars ($195,500) mentioned among the recitals hereof (viz., 94,000,000 kilowatt-hours at 2.08 mills per kilowatt-hour), becomes less than one hundred ninety-five thousand, five hundred dollars ($195,500), and that full compensation is not otherwise received by Conowingo Companies for such diversion, then the payments provided in (a) and (b) shall be decreased as follows:

Let "R" represent the ratio of the gross gain, (as decreased by diversion but corrected for partial compensation, if any), to one hundred ninety-five thousand, five hundred dollars ($195,500). If the diversion is made above the Holtwood dam, then the payments for (a) Holtwood loss and (b) Conowingo gain shall both be reduced by the

factor "R". If the diversion is made below the Holtwood dam, then the payment for (a) Holtwood loss shall not be changed, but payment for (b) Conowingo gain shall become

$$\frac{R \times \$195,500 - \$72,000}{2}$$

7. In addition to the aforementioned payments, if for any reason the Conowingo pond elevation exceeds 108.5 feet for an aggregate of more than two hours in any one day or reaches 109 feet at any time during any day, Conowingo Companies shall pay Holtwood Company a sum equal to the product of eight mills and the number of kilowatt hours, computed hour by hour for the duration of the excess pond elevation as the product of the actual Conowingo power house discharge during the hour, in c.f.s. hours, the average excess pond elevation above 108.5 feet during the hour and the factor 0.072 (corresponding to 85% efficiency). Nothing herein contained, however, shall give Conowingo Companies any right to allow the Conowingo pond elevation to exceed 108.5 feet. All payments under this paragraph 7 shall be made at the same time as payments under paragraph 6, viz., on or before the fifteenth day of January, April, July and October respectively for the preceding quarter.

[23628]

8. When, and only so long as, any excess of the Conowingo pond elevation above 108.5 feet is due solely to acts of God or of the enemy or unavoidable accident, without negligence on the part of Conowingo Companies, and in spite of all reasonable precautions taken by Conowingo Companies to prevent or abate such excess, then and to that extent, but in no other event whatever, Conowingo Companies shall be excused from making payments required under paragraph 7 hereof, except such part, if any,

of such required payments as may represent actual gain to Conowingo Companies from such unavoidable excess.

9. This agreement and all its provisions, covenants and conditions shall continue in force for a term of fifty years from and after its date, but Conowingo Companies, their respective successors or assigns, shall have the right at any time, not later than one year prior to the expiration of said term, by notice in writing to Holtwood Company, its successors or assigns, to renew this agreement and all its provisions, covenants and conditions for another term of fifty years, to commence on the expiration of the original term, and to be subject to the same provisions, covenants and conditions as this agreement, so that this agreement may thus be renewable from time to time forever. Upon the expiration of this agreement at the end of the original term without renewal or of any renewal term without further renewal, all consent granted to Conowingo Companies under paragraph 4 hereof shall be withdrawn and all liability of Conowingo Companies to make, and all right of Holtwood Company to receive, payments under paragraph 6 hereof shall cease, and thereafter the rights and liabilities of the parties hereto shall be governed by the provisions of paragraph 5 hereof.

10. Any dispute between the parties hereto as to their respective rights hereunder shall be settled by arbitration as follows: Each party shall appoint one arbitrator and a third arbitrator shall be selected by the two so appointed. In case of the failure of either party to appoint an arbitrator within thirty days after request by the other party or in case of the failure of the two arbitrators first appointed to agree within thirty days upon the selection of a third arbitrator, in either event an arbitrator shall be named by the person who is then the Chief Judge of the Supreme Bench of Baltimore City. The decision in writing of any two of said arbitrators shall be final and binding upon the parties hereto.

11. A copy of this agreement shall be filed in the aforesaid equity case in the United States District Court for the District of Maryland and Pennsylvania Water & Power Company and The Susquehanna Power Company shall unite in asking an order staying further proceedings in said case but retaining jurisdiction in the premises, without prejudice.

12. This agreement is subject to the approval of the Public Service Commission of Pennsylvania, so far as required by law, and shall become effective only when so approved by said commission. This agreement is also conditioned upon the right of Conowingo Companies to include the payments herein provided for as part of the operating costs of the Conowingo Project and upon the approval, before or after the beginning of said payments, of said payments as such operating costs, by any governmental regulatory body, if and only so far as such body may lawfully have jurisdiction and such approval may be required by law.

Pennsylvania Water & Power Company does hereby constitute and appoint *Ralph L. Thomas* to be its attorney for it and in its name and as and for its corporate act and deed to acknowledge this instrument before any officer authorized by law to take such acknowledgment, and The Susquehanna Power Company, The Susquehanna Electric Company and Philadelphia Electric Power Company do each hereby constitute and appoint *W. H. Johnson* to be its attorney for it and in its name and as and for its corporate act and deed to acknowledge this instrument before any officer authorized by law to take such acknowledgment.

In Testimony Whereof Pennsylvania Water & Power Company, The Susquehanna Power Company, The Susquehanna Electric Company and Philadelphia Electric Power Company have each caused these presents to be signed in its corporate name by its President or a [23629] Vice-President, and its corporate seal to be hereunto affixed,

duly attested by its Secretary or an Assistant Secretary, all in duplicate as of the day and year first above written.

PENNSYLVANIA WATER & POWER COMPANY,

EXHIBIT NO. 237.

[23635]

May 16, 1945

In Re: Duties of Engineers (Flowage Basin) 1911-1925, incl.

Between the date of commercial operation of the Holtwood plant and the year 1925 there were charged to the 338 account, from time to time, amounts paid as salary or expenses to engineers. The apportionments of monthly salaries represent a distribution of the employees' time as determined by department supervisors.

It is known from reference to our engineering field notebooks, drawing files, the history of flashboard suits, and the recollections of a member of the Engineering Department whose employment started in 1916, that charges to the 338 account prior to the beginning of the job order system were for three principal types of work. These were river observations for the collecting of original basic data regarding flow characteristics, rates of run-off under varying rainfall conditions, etc., backwater observations and surveys required for the defense of lawsuits, and property surveys required for information prior to purchase of property and for marking property boundaries after acquisition.

River observations refer to the establishment of river sections, involving surveys to locate the section and soundings to determine the cross-section of the river; to the development of rating curves and water surface profiles by observation and computation to show relationship between elevation and flow, to observations required to determine the effect of ice conditions upon flow and backwater; to the time in which rainfall in the upper part of the drainage area would affect river flow at Holtwood. The plant at Holtwood was the first major development on the river and there was no available source of information for the basic data required other than the meager and incomplete records com-

piled prior to 1910. It is to be noted also that observations and records were needed over the whole drainage area of the Susquehanna and its tributaries, so that this development work was not limited to the area of the Holtwood pond. The expense of any recurrent readings or reports on gauges or river flow was charged as an operating expense.

To support a bill for injunction or a suit for damages, the plaintiff must make allegations as to flooding. In filing an Answer in such a suit the defendant must admit, deny, or demand proof of such allegations, therefore, in each of our flashboard cases specific information as to backwater elevations was required. The elevation of water surface could be determined within reasonable limits without field work if complete basic information were available, but in the case of lawsuits, theoretical computations do not have as much weight as actual field observations. In addition to field checks of the height of water at certain points under certain flow and dam crest conditions, it was necessary to determine the area of land affected by making a topographic survey and a boundary survey. In nearly every case of an equity suit or an action in trespass for flooding, we ultimately acquired the property involved so that the cost of this engineering work constituted a part of our acquisition expense.

In many other instances where property was acquired by negotiation not resulting from litigation, it was necessary to supply Mr. Bushong with information as to boundaries, topography, areas involved below certain contours, and other pertinent data. Many of our flowage releases are limited to certain specified areas or to certain specified elevations, and these limits had to be surveyed and marked for the benefit of both our agent and the property owner. Also, in the case of each property purchased in fee simple, permanent corner markers had to be set, signs had to be posted, and record drawings made up.

[23636] (page 2)

It is not the intention to indicate that the charges made to the 338 account in the past were solely for work in connection with river observations, backwater observations, and land surveys, as there may have been other types of investigation or development work performed. Bench marks had to be established for reference to elevations; triangulation networks set up for geographical location, the relationship between true and magnetic bearings had to be determined, and very often the engineer had to consult deed records for information as to the boundary lines of property abutting the property being surveyed. It is always advisable to make a plot of deed descriptions before starting a boundary survey, and in the case of a small, poorly defined property, such preliminary work may well be more expensive than the field survey.

The best information as to activities of field and office engineers whose salaries are charged in full or in part to the 338 account may be obtained from field notebooks filed at Holtwood, and the drawing file in Baltimore. Schedule "A" attached hereto is a summary of the field notebooks. Schedule "B," also attached is a list of drawings referring to the subjects discussed herein, and in most cases the title of the drawing is self-explanatory and requires no further comment. It should be noted that Schedules "A" and "B" are not based upon exhaustive studies, but if used in conjunction with the descriptions on expense accounts charged originally to 338-6E, are believed to be sufficient to show the nature of work involved.

[23637]

SCHEDULE "A"

Engineering Field Work in the Holtwood Flowage Basin During the Period 1911-1925, as Evidenced by Data Contained in the Field Notebooks.

The following references to engineering field notebook entries were taken from the card index kept with the notebooks in the Holtwood Office. The cards are arranged alphabetically according to location, type of work, etc., and therefore may contain some repetitions in subject matter due to cross-indexing. There is no indication as to where the expense attached to these items was charged, but the work covered is connected with the matters discussed in the preceding memorandum.

March 29, 1945

MEMORANDUM

Re: Lancaster Office Expense

After the Holtwood Development had been in operation for about one year a decision was made to increase the operating elevation of the pond during low flows by the use of flashboards although it was known that flowage basin property and property rights were inadequate for the higher backwater. Thus, additional property purchases were required at various locations, particularly, however, along Conestoga Creek and at other points on the Lancaster County side of the river. At the time, the staff of the Company was very small and it became necessary to hire someone who could devote full time to the work; therefore, Mr. Marvin E. Bushong, a native of Lancaster County, was employed in 1912 for this purpose. Mr. Bushong was familiar with local conditions, had a wide acquaintanceship, and the benefit of experience gained from the purchase of right of way for the 25 cycle transmission line between Holtwood and Lancaster built by Lancaster Edison Company—now merged with Pennsylvania Power & Light Company.

The work of acquiring a large number of properties in fee, or flowage rights, necessarily involved much patient and inconspicuous preparatory laying of groundwork, frequent contacts with attorneys representing the Company or the property owners, and frequent references to land records, so that it was natural to select Lancaster, the county seat, as a location for Mr. Bushong's office. At that time telephone service and highways were considerably better in the vicinity of Lancaster than in the vicinity of Holtwood, so that the work could be carried on more efficiently from the former location. Furthermore, by having the

office in Lancaster, Mr. Bushong was in a position to settle or prevent expensive suits brought or threatened to be brought against the Company for alleged flooding, ice damage, etc., and to gather information, consult witnesses, and otherwise conduct negotiations with the property owners when they visited Lancaster to sell produce in the markets or to make purchases, and such contacts were obviously without the disadvantage of the public knowledge that would have resulted from meetings at Holtwood.

The main function of the Lancaster Office when established, and for many years thereafter, was to acquire property required for and permanently useful to the Holtwood Development. Therefore, all expenses of the office, until 1926, were treated as we would today treat the expense of any field office set up in connection with any other construction job. Beginning in 1912, several owners of riparian property located in the Holtwood basin filed suits in an attempt to prevent the use of flashboards on the Holtwood dam, and this led to long drawn-out negotiations, resulting ultimately in purchase of the properties. Between 1912 and 1926 Mr. Bushong acquired a total of 67 properties, and the use of flashboards on the dam during low flow periods was continuous except during the [23652] (page 2) years 1915 and 1916. In addition to these purchases, however, Mr. Bushong carried on studies, investigations, and negotiations for such matters as the relocation of certain roads and bridges affected by backwater, the construction of fishways in the Holtwood dam, the relocation and improvement of the public road near Holtwood, and made preliminary studies and supervised work in connection with right of way purchases for the Holtwood-York, Holtwood-Coatesville, and Holtwood-Lancaster 60 cycle lines.

In carrying out work assigned to the Lancaster Office, Mr. Bushong from time to time hired capable men available in Lancaster or vicinity, who were not identified with

the Company. These men, both professional and non-professional, were useful in keeping contacts which enabled them to learn when deaths or changes in financial condition, or other factors, affected market conditions for specific properties and in making investigations, examining titles, negotiating for property or property rights, or in other phases of property acquisition work where direct action by the Company would have increased costs or had the effect of making amicable settlements extremely difficult, if not impossible. Because of Mr. Bushong's close contact with local conditions, his recommendations as to employment were usually approved and he was authorized to make employment contracts on a per diem or weekly basis, or a fee basis for the professional men, mainly attorneys, although none of them were considered regular employees. The services performed by these men cannot be set forth in detail as their sole contact with the Company was through Mr. Bushong, who assumed all responsibility for their employment and supervision. In some cases we can trace our present land titles through these agents, but in other cases the name of the agent or attorney does not appear in our records except in connection with the payment of the salary, fee, or expenses.

The work carried on in the Lancaster Office at times called for engineering information, which was supplied to Mr. Bushong by our forces at Holtwood or Baltimore. For many years it has been our policy to survey and permanently mark the boundaries of properties purchased by the Company, and to make maps and other permanent records. Therefore, the operations of the Lancaster Office necessitated field and office engineering work which some times preceded and sometimes followed the actual purchase of property or flowage rights. Thus, charges to the Flowage Basin Account for engineering work were not usually made at the same time, or even in the same year as other charges for the same property or properties.

After the completion of the hydro plant extension, the construction of the York, Coatesville, and Lancaster lines, and the steam plant it was recognized that the function of the Lancaster Office would change, in that it would no longer serve solely as a field construction office. The office was continued as a general office, and a fixed percentage of the expense was charged to operation, beginning in January, 1926. This breakdown between construction and operation continued until January, 1930 when Safe Harbor land purchases required major attention and all charges to P. W. & P. Co. construction costs were discontinued except for charges directly connected with the purchase [23653] (page 3) of right of way for the Safe Harbor Transmission System. Since the completion of the Safe Harbor-Westport transmission line and the purchase of right of way for the Safe Harbor-Riverside line, all expenses of the Lancaster Office allocated to Pennsylvania Water & Power Company have been charged as an operating expense.

April 5, 1945

Real Estate Purchases Made by
Lancaster Office (M. E. Bushong) 1912 to 1925, incl.
Information taken from vouchers and deeds.

	1925	
R 21	McCormick Island (Shoff)	River Coal Recovery, also required for initial hydro development but its existence was not known until owner demanded its purchase.
E 97 (incl. 102)	DePue Property	Flashboard Operation, would have been purchased in 1913 & 14 when other Conestoga Creek properties were purchased but owners could not be located. Owner later appeared and entered suit, which was settled by property purchase. Now also part of Conestoga Substation site.

[23662] (page 5)

Of the above listed properties, the following were either wholly or partially covered by flowage releases at the time of their fee acquisition:

E-30 B Colemanville Water & Power Co. (Sawmill Tract)

Acquired in fee in 1921; includes portions of release properties E-29 and E-45 originally obtained in 1900 from Frederick Shoff, et al. However, fee purchase also included much land not covered by release.

E-46 A-E Paul Heine

Acquired in fee in 1920; this property is made up entirely of portions of release properties E-44 and E-45 originally obtained in 1900 from Frederick Shoff, et al.

E-47 Washington Martin

Acquired in fee in 1923; comprised of portion of release property E-44 originally obtained in 1900 from Frederick Shoff.

E-48 A&B Mary E. Harnish

Acquired in fee in 1920; release over same property had been obtained in 1914 from same party.

E-52 A&B John W. Hiemenz

Acquired in fee in two purchases in 1920 and 1922; comprised of major portion of release property E-52 A&B originally obtained in 1901 from John Pontz.

EXHIBIT NO. 239.

[23663]

August 6, 1945

There is set forth below supplemental information as requested by Mr. Newlands in connection with the following vouchers:

Year	Voucher No.	Name	Amount
1915	J-245	Simpson, Thacher & Bartlett	$1,000
1915	6985	Jas. H. Harlow Co.	250
1916	10044	John E. Malone	600
1917	13756	John E. Malone	1,650
1917	13749	Simpson, Thacher & Bartlett	850
1917	11221	Jas. W. Kenworthy	750
1917	12995	John M. Groff	500

1919	3767	J. M. Groff	500
1919	6207	J. M. Groff	500
1919	5383	Jas. Kenworthy	250
1920	9184	John E. Malone	1,500
1920	7883	J. M. Groff	3,500
1920	9011	J. M. Groff	500
1920	9011	Heine, Heimenz & Harnish	1,500
1920	9329	Simpson, Thacher & Bartlett	170
1921	10850	John E. Malone	5,500
1921	12176	John E. Malone	2,500
1921	12541	John E. Malone	2,500
1922	15688	John E. Malone	2,500
1922	15077	J. M. Groff	5,000
1922	14599	J. M. Groff	250
1923	20622	J. M. Groff	2,500
1923	21729	J. M. Groff	1,000
1923	21781	J. E. Malone	1,000

Year	Voucher No.	Name	Amount
1923	18986	J. E. Malone	1,000
1923	16458	John M. Groff	1,000
1923	19542	Gannett, Seelye & Fleming	2,000
1924	23440	John M. Groff	1,000

Vo. 6892 (J-245)—The law firm of Simpson, Thacher & Bartlett, which is located in New York, represented the Company for many years, beginning in 1910, and was frequently consulted by Mr. Chas. E. F. Clarke on all phases of the Company's business. In the case of the $1,000 charge to Account 338 through the above noted voucher, it has been found that the services were rendered in the Woelpper injunction suit, at the request of Mr. Clarke.

[23664] (page 2)

Vo. 6985—Payment for professional engineering services rendered by Jas. H. Harlow & Company in connection with a report on ice conditions on the Susquehanna River between 1872 and 1915.

Vo. 10044—Mr. John E. Malone became counsel for the Company in 1912 and served in that capacity until his death. He was active in all local property matters and litigation from the time of his employment, and after 1920 acted as chief counsel for the Company. The amount charged to Account 338 through voucher 10044 represents the portion of his retainer applied to his work in the flashboard suits and the purchase of properties. These services cannot be identified with any particular property but must be considered in view of information contained in memorandums dated March 29, 1945 and May 23, 1945. To avoid repetition, it is to be noted that the charges made to Account 338 through vouchers 13756, 2913, 6238, 9184, 10850, 12176, 12541, 15688, 21781, and 18986 are all of the same character and represent payment for legal services attached to the defense or preparation for defense of lawsuits and the subsequent acquisition of property in fee, or

other interests in land used and useful for the Holtwood development.

Vo. 13749—Represents portion of Simpson, Thacher & Bartlett fee paid for services in the Vandersloot case.

Vo. 11221—James W. Kenworthy, an attorney, was active in the negotiations for the Ben Davis property. He purchased a mortgage upon which suit was brought to force sale of the property and assisted in the litigation. See also Vo. 5383.

Vo. 129[illegible]—See also vouchers 3767, 6207, 7883, 9011, 15077, 14599, 20622, 21729, 16458, and 23440. John M. Groff was an attorney in Lancaster who had a large practice, knew many people in Lancaster County, and became a judge in the local courts in 1927. He was retained by Mr. Bushong to assist in the purchase of properties, but his value to us was mainly the fact that he was not identified with the Company. Therefore, there are no records available to indicate in detail the services rendered, but it is known that he performed services in connection with the acquisition of the Ben Davis property and the Heine, Heimenz, and Harnish tracts. It is probable that he helped in acquiring the Colemanville Water & Power Company property and the Lancaster and York Furnace Street Railway Company property, as well as other properties acquired during the period of his employment.

Vo. 2441 (J-383)—Edwin F. Smith was a consulting engineer located in Philadelphia. The services rendered were a study and report on floods and low water in connection with the flashboard suit brought by the Lancaster Electric Light Heat & Power Company, which owned several small hydroelectric plants on Conestoga Creek.

Vo. 9329—The amount of $170 charged to Account 338 out of the larger payment of $1,500 made to Simpson, Thacher & Bartleit was set at the time the services were

rendered and we have no additional information at this time.

Vo. 19542—The firm of Gannett, Seelye & Fleming, Consulting Engineers located in Harrisburg, was formed in 1915 by Mr. Farley Gannett, who had previously been Chief Engineer of the Water Supply Commission of Pennsylvania. He was thoroughly familiar with the entire drainage area of the Susquehanna River and with problems connected with the recovery of river coal and other materials from the bed of the river. Although there is no report in our Report File to describe the nature of the services rendered in 1923, it is believed that they were primarily in connection with our proposed construction of a steam plant at Holtwood, and the use of river coal as a fuel.

[23665]

HUGH L. COOPER
Consulting Engineer
60 Wall Street
New York

January 30, 1908

McCall Ferry Power Company,
60 Wall Street, New York.

Dear Sirs:—

I have to-day been shown a copy of the resolution adopted at your last Board meeting to the effect that all of my organization at McCall Ferry should be discharged on February 1st.

In view of my contract with the McCall Ferry Power Company, I feel that I should now advise you that if this order is carried out it will largely increase the expense of the final completion of the work and the time necessary therefor, and will, I believe, result in great damage to the interests of the Company. Also I must call your attention to the fact that if this organization is discharged, it practically makes it impossible for me to fulfill the provisions of Clause 4 of our contract with reference to supplying such organization.

Also it discharges Mr. Value and if he is discharged it will probably not be possible to again obtain his services, and I cannot be held responsible for not obtaining him again if he is once discharged.

The organization that we now have at McCall Ferry is one of approved and accepted efficiency and if they are discharged it will be impossible to get together again an organization of equal efficiency, and I wish you to formally know that I personally will [23666] (page 2) be very much damaged by the disbanding of an organization which I have been so long in educating and bringing up to such a state of efficiency and I trust that you will upon further con-

sideration feel that it is desirable and necessary to rescind the resolution which was adopted at your last meeting.

I also notice that the resolution provides that the Hydraulic Department should immediately complete all plans and details for the hydraulic work.

It will not be possible for the Hydraulic Department to complete such plans except as the work progresses, and the above remarks with reference to the McCall Ferry organization apply with equal strength to all of my organization in the City of New York.

It has also seemed to me desirable that I should now refer to our contract of October 18, 1905.

You will remember that I was at first instructed to proceed with the construction of the McCall Ferry dam, the crest of which was to be at Elevation 185.00 above sea level, and that plans were gotten out for this work and a large amount of money spent on the same, and in fact that all of the equipment and a large portion of the construction bridge were designed and installed for the dam at Elevation 185.00.

After the accomplishment of the above work you instructed me to change my plans and that you wished the dam to have an Elevation of 165.00 feet above sea level.

Then in order to increase the head, due to the construction of the dam at Elevation 165.00, you ordered certain excavations at Cully's Cut and the building of various other auxiliary works not contemplated at the time of the execution of the contract of October 18, 1905.

[23667] (page 3)

In accordance with your instructions new plans were made and the work of building the dam at Elevation 165.00 and all the additional works required have proceeded under my direction until November 1, 1907, when in accordance with instructions from you, all work at McCall Ferry was practically stopped.

At the time I received such instructions I was carrying on the work and was prepared to continue it.

I have received no instructions for resuming the work.

At first you made monthly payments to me of $5,000. under the terms of the contract and then you requested that the monthly payments be reduced to $4,000., the request being made and my consent being given upon the specific understanding that such reduction would not prejudice the claims of either party" as stated in Mr. Dimock's letter to Mr. Barnum of October 11, 1906, in which letter it was also stated that "either party can ask for a settlement of the entire question, including past payments, at any time".

It seems to me that the time has now come for adjusting this matter. You continued making payments until I received a total of $100,000. and no payments have been made since that time, the last payment to me being July 31, 1907.

My position with reference to this matter is as follows:

1st. The agreed compensation in Clause 9 of our contract was based upon the estimated cost of building the dam to an Elevation of approximately 180.00 feet and such estimate as made by you required of me the responsibility of building and designing approximately $2,982,000. worth of work. If you had built the work upon [23668] (page 4) the plan of approximately Elevation 155.00 under the contract of October 18, 1905, the amount of work required for me to design and be responsible for the building of would be approximately $1,731,000.

Now instead of either of the plans mentioned in the contract of October 18, 1905, you instructed me to build the dam at Elevation 165.00, with a large amount of other additional work by way of controlling the water, lowering the wheel pits, tail race excavation and ice control, which have brought the cost of the work which I have had to design and be responsible for up to the sum of $3,778,000.

The time that I have been obliged to personally spend on this construction has been much more than would have been required under the original plan of the dam at Elevation 185.00.

My position on this point therefore is that the payments due to me under the contract are at least those specified in Clause 9 of the Agreement and that you now owe me $25,000., which is the difference between the $100,000. that you have already paid and the $125,000. specified in Clause 9 of the contract.

At the time when work was discontinued, the work at McCall Ferry was advanced to a point where the setting of the turbine machinery could begin and in spite of the changes ordered from time to time since I commenced the undertaking, was at the time of cessation of work on November 1st. in reality much in advance of the completion required in Clause 11.

It is further to be said that if the work had not been stopped on November 1st. the progress we were then making would justify the starting up of the plant at least four months ahead of the time required by Clause 11 and my receiving the bonus [23669] (page 5) for time of completion as specified therein.

Accordingly, I now consider that you owe to me the $25,000. above referred to and a $10,000. payment (a part of the bonus) for the months of January and February, 1908, the $50,000. bonus being due in monthly payments under the contract, commencing January 1, 1908.

I request that the foregoing amounts due should now be paid to me or that you should now make some satisfactory provision for future payments of the above sums.

In writing you as above I beg to assure you of my deep interest in the welfare and future of the McCall Ferry Power Company and of my readiness now and always to aid you in whatsoever way I can, and I wish to convey my further assurance that in no way do I wish to interfere with or make more difficult the carrying out of your present plans or any of your future plans for financing this enterprise, but it has seemed to me desirable and necessary that I should now state to you my views.

Yours very truly,

HUGH L. COOPER

Chief Engineer
WM. BARCLAY PARSONS
Consulting Engineer

March 11th, 1908.

H. F. Dimock, Esq., President,
McCall Ferry Power Company,
#60 Wall Street, N. Y. City.

Dear Sir,—

I am attaching a copy of letter just received from Mr. Cooper.

The status of this matter is that Mr. Cooper has been paid $100,000 in all. The least amount due him will be $135,000. Our agreement with him provides that the payment shall continue after January 1st, 1908. As I have said, I think Mr. Cooper has earned his bonus for early completion. There is, therefore, no reason why Mr. Cooper should not receive the $5,000 he asks for, other than the financial condition of the Company.

Very truly yours,

CARY T. HUTCHINSON
Chief Engineer.

Simpson, Thacher and Bartlett,
Philip G. Bartlett, Esq.,
25 Broad St., New York City.

Dear Sir:—

I enclose two sheets, one showing the distribution of stock held by Messrs. Harvey Fisk and Sons between themselves and myself, the other showing the names in which I wish the stock going to me, divided.

As you suggested, I will send these various agreements to the people to be signed, and have them returned either to you or to Messrs. Harvey Fisk and Sons, as you prefer.

Yours very truly,

CARY T. HUTCHINSON

New York City.

Dear Sir:

We have your letter enclosing statement of McCall Ferry Power Company common stock and also of the distribution desired of the common stock going to yourself.

In order to facilitate and hasten the carrying out of this distribution we send you herewith ten copies of the Stock Deposit Agreement, so that you may procure one of these to be signed by each of the distributees. Meanwhile we will forward your list to Harvey Fisk & Sons so that they will have ready the Stock Deposit Receipts to furnish in exchange for these agreements when signed and redelivered.

Yours very truly,

NOTES

TO FOREGOING FINANCIAL STATEMENTS

Note A:

At December 31, 1945, the Company and its subsidiary were subject to regulatory action in connection with their rates, the licensing of the Holtwood hydroelectric and other properties and the "original cost" thereof, which matters, if settled on bases unfavorable to the companies, would have an adverse effect on their property, surplus and other accounts and on future earnings. Information regarding these matters, which in some respects are inter-related, is set forth below:

Rate Investigations

On September 1, 1944, the Federal Power Commission issued an order instituting an investigation to determine whether, in connection with any transmission or sale of electrical energy subject to the jurisdiction of that Commission under the Federal Power Act, any rates, charges or classifications demanded, observed, charged or collected by the Company, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications are unjust, unreasonable, unduly discriminatory or preferential; and if, after hearing, it should be found that any of such rates, charges, classifications, rules, regulations, practices or contracts are unjust, unreasonable, unduly discriminatory or preferential, to determine and fix just and reasonable rates, charges, classifications, rules, regulations, practices or contracts to be thereafter observed and in force. Under date of October 3, 1944, the Federal Power Commission enlarged its order of September 1, 1944, to the Company by issuing a supplemental order to include in its investigations the Susquehanna Transmission Company of Maryland, a wholly-owned subsidiary of the Company. The Commission has set March 25, 1946 as the date for commencement of a hearing in this matter.

Under date of December 5, 1944, the Pennsylvania Public Utility Commission issued an order instituting an inquiry and investigation upon its own motion under the provisions of the Pennsylvania Public Utility Law for the purpose of determining the fairness, reasonableness and justness of the rates and charges of the Company. The order states that the inquiry and investigation shall include consideration of the imposition of temporary rates under the provision of Section 310 of the Public Utility Law.

License Proceedings

In compliance with the Federal Power Commission's order of November 3, 1939, from which the Company had unsuccessfuly appealed to the Courts, there was filed, on May 18, 1942, an application for a license under the Federal Power Act to maintain and operate its Holtwood hydroelectric project. Although formal tender of a license has never been made by the Commission, the Commission, under date of November 23, 1943, issued an "Order Authorizing Issuance of License (Major)". Pursuant to the Company's Petition for Rehearing on this order, the Commission, on January 21, 1944, issued another order staying its order of November 23, 1943, and requiring the Company to submit in writing to the Commission certain information. This information was furnished to the Commission under date of February 10, 1944. Since that date there have been no further developments in this matter.

Original Cost

The work of reclassifying the property of the Company and its subsidiary, Susquehanna Transmission Company of Maryland, according to the system of accounts prescribed by the Federal Power Commission, the Pennsylvania Public Utility Commission and the Public Service Commission of Maryland, and of making studies of the original cost of the properties when

first devoted to the public service, was completed and reports were filed with the respective commissions on May 15, 1940.

This system of accounts provides for the use of adjustment accounts to show the difference between such original cost and the amounts shown by the books of account of the "accounting utility", and amounts recorded in such adjustment accounts are to be disposed of as these commissions may approve or direct. The completed reports of the Company and its subsidiary provide for the transfer of $2,106,765.32 to the Electric Plant Adjustments accounts. Pending orders from the commissions no entries have been recorded on the companies' books to give effect to such original cost reclassifications.

Note B:

The amounts charged to income for depreciation are the same as the deductions for depreciation claimed, or to be claimed, for income tax purposes.

Note C:

Amortization of Debt Discount, Premium and Expense-Net, includes for the year 1945 a charge of $43,610.10, and for the year 1944, a charge of $174,440.36 for amortization of the debt discount and expense and the redemption premium applicable to the Series B, 4½% Bonds due 1968, which were redeemed as of March 1, 1940, less credits of $10,834.08 and $10,938.52 for 1945 and 1944, respectively, representing amortization on a straight-line basis of the net premium applicable to the presently outstanding 3¼% bonds.

There was concluded on March 31, 1945, the 61-month period of amortization of debt discount and expense and redemption premium aggregating $886,738.51 and applicable to the Series B, 4½% Bonds due 1968, which were redeemed as of March 1, 1940.

Note D:

The Federal Power Commission issued an order dated September 1, 1944 instituting an investigation of the rates of the Safe Harbor Water Power Corporation. This order was similar to that received by the Company, bearing the same date and referred to in Note A. Hearings in this matter were concluded March 16, 1945, and briefs have been filed by the Corporation and the Commission, but no decision has been rendered by the Commission. As stated in the accompanying balance sheet, the Company owns one-third of the outstanding stock of that Corporation.

DETERMINATION OF COST OF SERVICE
TO
CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY
OF BALTIMORE .

Purpose and Scope of Exhibit

This exhibit sets forth the results of studies made to determine the costs incurred by Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland, hereinafter jointly referred to as Penn Water, in serving the Consolidated Gas Electric Light and Power Company of Baltimore, hereinafter referred to as Baltimore.

As used herein cost is defined to include all expenses of operation and maintenance, including the cost of purchased power and energy, depreciation, taxes and return. The beginning point of the studies made is Penn Water's total investment in plant, rate base, and costs. The problem is to determine what portion of the total investment, rate base, and costs are properly assignable to the services rendered by Penn Water to Baltimore.

For purposes of this study two separate and distinct determinations have been made. The first study starts with Penn Water's cost of service for 1944 as set forth in Exhibit 64 introduced by Mr. George Davis in these proceedings. The second study starts with Penn Water's cost of service for 1946 as furnished by Penn Water. Neither the 1944 or 1946 total costs used herein have been verified or investigated as part of this study. Furthermore, the use of the principles or methods followed in arriving at the rate base, the rate of return and depreciation involved in each of the total cost determinations is not to be taken as an indorsement of their reasonableness. As stated at the outset, the purpose of the studies made was to find and apply a method of determining what portion

of these costs are properly assignable to the services rendered by Penn Water to Baltimore. The same method and principles of allocation found to be reasonable have been applied to each set of investment and cost figures.

This study of costs includes no analysis or studies of the revenues of Penn Water.

For convenience in reference, the first study based on Exhibit 64 is herein referred to as the 1944 Cost Study, and the second study, based on Company 1946 costs as the 1946 ~~Cost~~ Study.

Source of Data

The basic data required for this exhibit consists of the two cost studies, 1944 and 1946, already mentioned and discussed. Where further detail was necessary regarding any of these basic figures, it was obtained either from the record in the case or from the records of the Company.

The determination of what would be a reasonable and feasible method of assigning property and costs is based on a study of the services rendered, the operations of the system, and the costs involved. This study included a review of a number of exhibits and some of the transcript of the proceedings in the case, discussions with officers and employees of Penn Water, inspection of the plant and information requested from the records of the Company.

Summary of Results

Based on the total Penn Water costs of service of $3,057,236 for 1944, as taken from Exhibit 64, it has been determined that the portion properly allocable to the services rendered to Baltimore for that

year is no less than $1,855,895.

Based on the total Penn Water costs of service of $7,214,016 for 1946, as supplied by Penn Water, it has been determined that the portion properly allocable to the services rendered to Baltimore for that year is no less than $2,984,826.

A summary of the costs and their allocation to Baltimore is contained in the tables forming a part of Schedule A, for the 1944 Cost Study, and of Schedule B for the 1946 Cost Study. Both of these schedules are attached. An explanation of each of the allocations shown on these tables is set forth in the notes following each Schedule. In addition to these explanations, there follows a brief discussion of the problems and considerations involved respecting some of the major items of plant.

Discussion

This study is concerned with the cost of rendering service to a particular customer - one of a number of customers served by Penn Water. The problem then is that of determining the services actually rendered and the costs relating thereto.

Penn Water is at the hub of a large power supply pool. Physically, this pool is formed by the interconnection and co-ordinated operation of a number of large electric utility systems. Contractually, the pool is made possible by a number of agreements, some joint with one or more of the other suppliers, with varying degrees of responsibilities and obligations on the part of the parties, and some singly with individual customers. Thus, the types of service rendered are many and varied in character. Interconnected electric utility system operations are, of course, not novel. In this case, however, such operations are the sum

total of the company's operations, and not, as is frequently the case, a small part of the total operations. Furthermore, the joint nature of many of the operations serves to very closely knit Penn Water into the whole interconnected system. Lifting Penn Water out of this position and treating it as a self-contained whole, while contrary to its manner of operation, is possible in connection with the determination of Penn Water's cost of service to Baltimore Company.

Viewed alone, Penn Water owns and operates certain facilities for the purpose of delivering and rendering certain services. The same facilities, in some cases, are used to receive services from others which are used or needed in connection with the deliveries made. A review of the facilities of Penn Water reveals that while the operations involved over the facilities may be very complex, particularly contractually, the actual purpose and use of the facilities is comparatively simple with reference to the services to Baltimore.

Over 95% of the total investment in property and plant, exclusive of intangible and general plant, is represented by only 10 items or groups of property; a hydro plant, a steam plant, four major transmission systems and four large substations. Furthermore, as will be shown later, only 5 of these large items are involved in service to Baltimore and of these 5 only 3 have some use other than for service to Baltimore. Thus, from the point of view of facilities and the costs related thereto, the problem of determining the cost of service to Baltimore becomes primarily one of allocating the joint use of only 3 major items of property.

In addition to the costs associated with its own investments, Penn Water has other costs. It receives services from Safe Harbor Water Power Corporation, hereinafter referred to as Safe Harbor, and it engages in interchange transactions with its customers resulting in the receipt as

well as delivery of energy and services. The costs associated with these transactions must also be allocated to the use made of these services. Consideration was given to the character of these services. It was found that some of the costs associated with these services might properly be allocable to Baltimore but that the amount involved would be relatively small. Accordingly, no part of the payments associated with these services has been assigned to Baltimore. Thus, it may be stated that the cost to serve Baltimore is no less than the amount determined herein.

As in the case of practically every cost allocation, it is necessary to exercise judgement with respect to the handling of many joint items of investment and costs. In this case, the zone within which judgement has entered has been reduced as far as possible by the identification of plant and costs whenever such information was available. Judgement has thus been limited to adopting the proper method and reasonable allocation ratios in the handling of items beyond this point.

Production Plant

Penn Water owns and operates both a steam and hydro electric power plant. The steam plant generates 60 cycle current whereas the hydro plant has both 60 and 25 cycle generating facilities. There are two frequency convertors located in the hydro plant which permits a limited amount of conversion from 25 to 60 cycle and reverse.

No portion of the steam plant investment or costs, nor the hydro 60 cycle plant investment or costs, is assigned to Baltimore services. Undoubtedly, at times some small part of the 60 cycle generated energy reaches Baltimore either as 60 cycle energy or through the frequency convertors as 25 cycle energy. The distribution of the loads, other sources of supply and transmission facilities is such, however, that the amount of 60 cycle

generated energy that would be delivered to Baltimore in any one year would be comparatively small.

The steam plant investment and costs are readily obtained from the accounts of the company and requires no allocation. The hydro investment and costs, however, are not all identifiable and an allocation is necessary. The hydro plant contains 8-25 cycle three phase units having a total rated capacity of 87,000 KW and two 60 cycle three phase units totaling 24,000 KW. The rated capacity of each frequency converter is 5,000 KW.

The 25 cycle generation is delivered to two customers, Baltimore and Lancaster (Pennsylvania Power and Light Company). In addition, on a net basis, a small amount of 25 cycle generation is converted from 25 to 60 cycle energy. For the year 1946, out of a net 25 cycle generation of 447 million kwhrs, approximately 10 million kwhrs or less than 2.5% was converted from 25 to 60 cycle on a net basis. This ratio will vary some from year to year. However, the average net 25 cycle delivery to 60 cycle for the five year period 1941-1945 is also approximately 10 million kwhrs. On a capacity basis the frequency converters are used at full capacity for deliveries in either direction. In view of the small amount of net conversion, and the capacity use of the converters, no part of the 25 cycle hydro plant investment or cost is allocated to the 60 cycle generation. The allocated 25 cycle generating cost is divided entirely between Baltimore and Lancaster deliveries. This step is considered reasonable since the possible resulting inaccuracy is well within the limits of accuracy of any cost allocation.

The 25 cycle deliveries to Lancaster are also comparatively small in relation to the total 25 cycle generation or the amount delivered to Baltimore. In 1946, the 25 cycle send out to Lancaster was 31,489,000 kwhrs, or 7.7% of the amount delivered to Baltimore and 7.0% of the net 25 cycle genera-

tion. In view of this fact, no detail allocation of costs between demand and energy components was made of the 25 cycle generation costs to determine the amount to be assigned to Baltimore. The assignment was made on the basis of a study of the relative capacity and energy required for the two loads. This is considered a reasonable basis, under the circumstances, for again the possible resulting inaccuracy is well within the limits of accuracy of the cost allocation.

Riverside and Westport Transmission Lines

These two 220 KV transmission lines and the related Ma or substation together represent the second largest item of property used in rendering service to Baltimore. These lines were built to transmit Safe Harbor energy to Baltimore. This is still the essential purpo e of these lines. On this basis, the entire cost of these lines should be allocated to Baltimore.

These lines are also used, however, to carry backfeed from Baltimore to Safe Harbor. This back feed is comingled at this point and is used in connection with deliveries to other customers. The specific use of this backfeed cannot be determined and will vary from time to time. Furthermore, the amount of this backfeed varies considerably from year to year. For example, in 1942, it was 46,016,000 kwhrs and in 1944, 201,075,000 kwhrs.

The backfeed is in the nature of an incidental use since some, if not all of it, could be replaced by purchases from other available and connected sources. Furthermore, it appears that the amount of backfeed that will be used in the future will decrease materially due to the installations pending or in progress of considerable new and efficient generating capacity by other utilities connected to the network. However, sinc the backfeed does represent a use of the lines, some portion of their costs should be allocated to that use. The amount allocated can only be based on judgement

in the light of the facts available.

Ellicott Line and Switching Station.

The Ellicott line is a tap off the Westport line from Ellicott City to a connection with the system of the Potomac Electric Power Company neer Takoma Park, Maryland. Penn Water renders no service to PEPCO and this tap was constructed as a connection between Baltimore and PEPCO.

As in the case of the Westport and Riverside lines, some backfeed is also carried over this line. However, in this case, only a portion of this backfeed is delivered at Safe Harbor since some of it can and does go to Baltimore. All of the energy carried on this line is accounted for in the transactions between Baltimore and PEPCO.

Under the circumstances, the entire cost of this line and switching station is allocated to Baltimore.

Conestoga Substation and Perryville Line

This substation and transmission line were built by Penn Water in connection with the joint supply to the Pennsylvania Railroad by Penn Water, Baltimore, and Safe Harbor. Subsequently, PEPCO became party to the joint contractual arrangements.

Baltimore has no direct physical connection with the Railroad. Its obligations and deliveries to the Railroad are largely made over these facilities. Penn Water and Safe Harbor also make deliveries over these facilities to the Railroad. Accordingly, a portion of Penn Water's investment in these facilities and their cost of operation and maintenance are properly Baltimore's costs of service to the Railroad. This study is confined to the services rendered by Penn Water to Baltimore. Since in this case the facilities and the costs incurred are for joint

service to the Railroad, no portion of these costs have been allocated to Baltimore.

Holtwood Substation

The Holtwood substation is partly housed in the hydro plant and partly located adjacent thereto. It contains both 25 and 60 cycle transformers and equipment. The 25 cycle transformers are located within the plant and the 60 cycle transformers are outdoors adjacent to the plant.

As in the case of the hydro plant it is necessary to determine the 25 cycle investment in this substation and the operating and maintenance costs of this equipment. The investment and expenses for 25 cycle equipment are then allocated between Baltimore and Lancaster.

Schedule A - Table No. 1 -
Notes

Line 1 - Of the total hydro plant investment of $15,847,486, $10,643,172, or 67.2% has been found properly allocable to Baltimore. This is based on the conclusion that 73% of the hydro plant investment is allocable to 25 cycle equipment, of which 92.0% is allocated to Baltimore. These percentage allocations are judgement figures based on a careful study and consideration of available information. A brief statement of the information considered follows:

The bulk of the hydro production plant investment is in five accounts:

320 - Land and Land Rights
321 - Structures and Improvements
322 - Reservoirs, Dams and Waterways,
323 - Waterwheels, Turbines and Generators
324 - Accessory Electric Equipment

Only in the case of account 323 and 324 can some of the property be identified as 25 or 60 cycle and its cost determined. Some studies were made of these accounts for purposes of this allocation. Account 321 can, in its greater part, be allocated on the basis of the number of 25 and 60 cycle units, thereby allocating 80% to 25 cycle. Other parts of account 321, principally the Holtwood Village, will have a different allocation ratio, largely due to the fact that the village accomodates steam plant employees as well. For these three accounts the directly identified and allocated 25 cycle investment was found to be approximately 71% of the total.

There is no physical basis for allocating the two remaining large accounts, 320 and 322. In the case of these accounts, consideration was given to the relative number of units, rated capacity, demands, and generation of 25 and 60 cycle energy over a period of years. On these bases, the percent allocable to 25 cycle would be approximately as follows:

Number of Units	80.0%
Rated Capacity	78.5%
Hydro Peak Demand	77.5%
Generation	75.0%

Schedule A
Table No. 1
Notes

As stated above, after considering all the facts available, 73% of the total hydro plant investment was allocated to 25 cycle equipment.

In determining the portion of the allocated 25 cycle hydro plant investment properly chargeable to Baltimore, consideration was given to the relative energy deliveries, peak and non-coincident demands over a period of years. For the year 1946 and the average for the five years 1941-1945, the ratio of 25 cycle for Baltimore to the total for Baltimore and Lancaster for each of these items is as follows:

	1946	Average 1941 - 1945
Energy delivered - - - - -	92.8%	92.5%
Peak Demand, - - - - - - -	96.0%	95.8%
Non-Coincident Demand- - -	91.7%	90.5%

It is clear from the above ratios that any detailed demand and commodity allocation would not result in any material difference from either using a straight energy or demand basis. An overall ratio of 92.0% was adopted as a reasonable estimate of the results that would follow from any more detailed studies.

Line 2 - No part of the steam plant cost has been allocated to Baltimore for the reasons discussed earlier herein.

Lines 4 and 5 - The Holtwood-Baltimore (Highlandtown) line and substation are used exclusively for 25 cycle service to Baltimore. A small amount of backfeed does come over these lines. On a net hourly basis, the amount in 1944 was only 555,000 kwhrs and in 1946, 1,673,000 kwhrs. The gross deliveries to Baltimore over this line are well in excess of 300 million kwhrs per year.

Line 6 - This line has no other use except for Baltimore. It is not directly connected with the interconnected system net work.

Schedule A
Table No. 1
Notes

Lines 7, 8 and 9 - The allocation of the investment in the Westport and Riverside lines and in Manor substation has been discussed at some length earlier herein. After consideration of the available information, the purpose of the lines, and their probable future use, 85% of the investment has been allocated to Baltimore.

On an energy basis over the past six years, the backfeed over these lines has varied from 7.7% of the total sendout plus backfeed to as high as 41.6%. The average for the five year period, 1941 1945, was 19.1%.

If the problem of allocation of these items of investment were approached on the basis of a detailed demand and energy separation of costs, then the energy ratio, 81% to Baltimore and 19% to backfeed, might reasonably be used as a measure for allocating such costs of the lines as are considered variable with the energy transmitted. Only a very small portion of the costs vary with the energy transmitted and most of the costs are fixed and would be designated "demand costs". In this case the backfeed use is not a capacity but an energy use, so that 100% of the demand costs would be allocated to Baltimore. Assuming however, that the total costs of transmission in this case are divided 50-50 between capacity and energy costs, then the assigning of 100% of the capacity costs and 81% of the energy costs to Baltimore would result in an overall allocation of 90.5% of the costs to Baltimore. On this same basis, the overall percentage used of 85% is equivalent to assigning 90% of the capacity costs to Baltimore.

Lines 10 and 11 - The entire cost of the Ellicott line and switching station has been allocated to Baltimore. This line is used by Baltimore as a major connection with the PEPCO system.

Line 12 - Exhibit 64 shows as "Balance of Transmission" $1,560,090. This includes the Holtwood substation. Company records show as cost for the substation $1,188,774 of which $637,561 represents 25 cycle equipment. However, the various

Schedule A
Table No. 1
Notes

adjustments made by Commission examiners have all been reflected in the "Balance of Transmission" item. Without more detailed studies it was considered that a majority of these adjustments were applicable to the substation. Furthermore, for purpose of this study, all the adjustments, totaling $203,516, have been applied to the 25 cycle equipment in the substation. This leaves $434,045 as the 25 cycle substation investment of which 92% or $399,321 is allocated to Baltimore

Lines 13 to 24, inclusive - No part of the investment in these items of transmission plant has been allocated to Baltimore. These lines and facilities are for service to other utility customers and the Pennsylvania Railroad. Some of the interchange energy from these other customers might reach Baltimore but no allowance is made for such instances since the amount would be relatively small.

Lines 27 and 28 - Intangible and general plant has been allocated to Baltimore in proportion to the percent that the allocated total production and transmission is to the total plant.

Line 30 - Depreciation Reserve - The problem of allocating the depreciation reserve divides itself into three parts:

(1) Production plant hydro
(2) Transmission
(3) Holtwood Substation

In Exhibit 64, the reserve applicable to the hydro plant is shown as $4,383,189. Since 73% of the investment in the plant has been found to be 25 cycle equipment, it would follow that the reserve allocable to the 25 cycle equipment would reasonably be 73% of the total reserve. However, the 25 cycle equipment is older than the 60 cycle equipment. In view of the fact that the 60 cycle equipment is only about one fourth of the total, any adjustment in the reserve for the difference in age of the two types of equipment would be comparatively small. In recognition of the fact that age is a factor in the reserve used in Exhibit 64, 75% of the hydro plant reserve, or $3,287,354 has been taken as

applicable to the 25 cycle investment, of which 92%, or $3,024,366 has been allocated to Baltimore.

The depreciation reserve for transmission plant in Exhibit 64 of $2,105,915 is 18.25% of transmission plant. The reserve shown, however, as applicable to the plant directly allocated to Baltimore is 17.3% of the plant. Since the transmission property involved in Exhibit 64 as directly allocable to Baltimore is in a large measure the same transmission property allocated in this study, except for Holtwood substation, the 17.3% ratio is considered as the proper ratio to use for all this directly allocated transmission property except the Holtwood substation. Accordingly, the transmission reserve allocated to Baltimore is 17.3% of $5,809,656, or $1,005,070.

The reserve for depreciation for the Holtwood substation is included in the amount of $668,026 shown for the pool transmission facilities of $3,131,266, of which $1,188,744 is the Holtwood substation, and $1,942,522, other transmission plant. Applying the overall transmission reserve ratio of 18.25% to $1,942,522 results in $354,510 of reserve applicable to this plant and the remainder or $313,516 applicable to the Holtwood substation, which is 26.4% of the investment in the substation. Here again, consideration is given to the fact that the 25 cycle equipment is older than the 60 cycle equipment. In this case, however, the 60 cycle investment is a much larger proportion of the total so that a much greater adjustment appears reasonable in recognition of the nature of the depreciation reserve used in Exhibit 64. Under the circumstances, it is considered reasonable to split the reserve equally between the two types of equipment thereby allocating $156,758 to the 25 cycle investment. This is 36.1% of the 25 cycle investment and the remainder is 20.8% of the 60 cycle investment. There is allocated to Baltimore 92% of $156,758, or $144,217.

Schedule A
Table No. 1
Notes

The total depreciation reserve in Column 2 of line 30 is as follows:

Production-Hydro	$3,024,366
Transmission	1,005,070
Holtwood Substation	144,217
Total	$4,173,653

Line 32 - The total working capital of $590,000 in Exhibit 64 is composed of $224,000 for cash working capital and $366,000 for materials and supplies. In Exhibit 64, cash working capital has been allocated on the basis of operating expenses and materials and supplies on the basis of investment. However, the total amount of working capital is less than 2.5% of the rate base. Accordingly, in this study, the allocations already made are used as far as possible and the further allocations necessary are made on an investment basis.

The working capital allocated in Exhibit 64 to hydro plant is $262,303 or 1.7% of the investment. This percent applied to the hydro investment allocated to Baltimore results in an allowance of $180,934. The working capital allocated in Exhibit 64 to Baltimore directly on transmission facilities is 1.3% of the investment. This percent applied to the transmission investment allocated to Baltimore in this study results in an allowance of $80,717. The two allowances combined total $261,651 as shown in Column 2 of Line 32.

Schedule A - Table No. 2
Notes

Line 1 - The records of Penn Water do not show the amount of operation and maintenance separately for the 25 and 60 cycle generating units and facilities. There are many items of expense which are common to the entire plant. This is particularly true of supervision and maintenance of structures. In addition there are a number of items of accessory equipment such as the exciter system, which are common to both 25 and 60 cycle operations.

After consideration of the various factors involved it appears reasonable to allocate 76% of this item to 25 cycle operations. The relative 25 cycle generation is 75% of the total, the relative rated capacity is 78.5%, and the number of units, 80%. Using 76%, the amount allocated to 25 cycle is $272,065. Of this total, 92%, or $250,300 is allocated to Baltimore in the same manner as the 25 cycle hydro investment was allocated.

Line 4 - The transmission expense for each of the major lines is available from company records. These expenses are allocated to Baltimore on the same basis as the investment allocation. The load dispatching and Holtwood substation expenses are split 50-50 between 25 and 60 cycle service. Baltimore is allocated 92% of the 25 cycle costs. The detail of the allocation follows:

Item	Expense	Percent to Baltimore	Allocated to Baltimore
Westport and Riverside Lines and Manor Substation	$ 65,948	85.0	$ 55,971
Highlandtown Line and Substation and Gunpowder Line	120,135	100.0	120,135
Ellicott City Line and Switching Station	10,483	100.0	10,483
Holtwood Substation	36,318	46.0	16,706
Load Dispatching Expense	32,622	46.0	15,006
Balance	89,099	0	--
Total	$354,506	61.6	$218,301

Schedule A
Table No. 2
Notes

Line 5 - A review of the major items of General and Administrative expenses indicates that some items may properly be apportioned on the basis of investment and others on the basis of other operating expenses. Substantially all of the salaries and expenses of the general executives, legal services, insurance and regulatory commission expenses are incurred on problems dealing with the financial operations and return of the company. Costs of injuries and damages and employee's welfare and pensions are proportional to operating expenses. On the basis of the relative proportion of these two types of expenses, the total General and Administrative expense has been allocated 2/3 on the basis of investment and 1/3 on the basis of operating expenses. The following table shows the derivation of the amount allocated to Baltimore:

	Proportional to Investment	Proportional to Oper. Expenses	Total
General and Admin. Expenses	$327,261	$163,630	$490,891
Allocated to Baltimore	172,793	58,907	231,700
Percent to Baltimore	52.8%	36.0%	47.2%

Line 6 - For the reasons outlined herein, no part of the payments made to Safe Harbor are allocated to Baltimore.

Line 8 - The total depreciation expense of $464,212 as shown in Exhibit 64 can be broken down into the following subdivisions from the various tables in this exhibit:

Production		$311,579
	Hydro	$197,230
	Steam	114,349
Transmission		$152,633
	Baltimore - Direct	$ 65,858
	Balance	86,775

Schedule A
Table No. 2
Notes

The hydro depreciation expense is allocated directly in proportion to the investment allocated to Baltimore. On this basis 67.2% or $122,539, has been allocated to Baltimore. The Baltimore direct depreciation expense for transmission of $65,858 is 1.13% of the investment. These are essentially the same facilities allocated to Baltimore in this study except for the Holtwood substation for which the rate is 1.75%. Accordingly, the depreciation expense allocated herein to Baltimore for transmission facilities is taken at 1.13% of $5,809,656 plus 1.75% of $399,321, making a total for transmission of $72,637. The total depreciation expense allocated to Baltimore is thus $205,176.

Line 9 - The total taxes shown in Exhibit 64 of $536,964 has been subdivided as follows:

		Amount	Proportioned to:
Pennsylvania			
1.	Income, Capital Stk., Property & Misc.	$139,880	Investment in Pa.
2.	Gross Receipts and P.U.C.	25,934	Penn R.R. & Pa. Customers
Maryland			
3.	Income, Capital Stk., Property & Misc.	66,268	Investment in Md.
Federal			
4.	Unemployment and Old Age	23,912	Operating Expenses
5.	Income and Capital Stock	280,970	Return
	Total	$536,964	

For purposes of allocating the Pennsylvania and Maryland taxes, an analysis was made of the investment in each state and the proportion of such investment allocated to Baltimore herein. On the basis of this analysis, 46.2% of the Pennsylvania taxes, exclusive of gross receipts and P.U.C., and 84.4% of the Maryland taxes have been allocated to Baltimore.

Schedule A
Table No. 2
Notes

A summary of the allocations made follows:

Tax	Allocated to Baltimore	Percent to Total
Pa. - Income, Capital Stk, Property & Misc.	$ 64,625	46.2
Md. - Income, Capital Stk, Property & Misc.	55,930	84.4
Federal - Unemployment and Old Age	9,350	39.1
Federal Income and Capital Stk	148,352	52.8
Total	$278,257	51.8

Line 10 - The return allocated is equal to 5% on the allocated investment shown in Table No. 1.

SCHEDULE B
Table No. 1

SUMMARY OF ALLOCATION OF INVESTMENT AND DEPRECIATION TO BALTIMORE
-1946-

Line No.	Item	Total per Company (1)	Allocated to Baltimore (2)	Percent of Total to Baltimore (3)
	Investment			
	Production Plant			
1	Hydro	$ 18,518,534	$12,444,454	67.2

5	Administrative & General	906,281	456,463	50.4
6	Payments to Safe Harbor	1,016,501	-	0
7	Purchased Interchange	54,495	-	0
8	Total Operating Exp.	$3,472,222	$1,007,215	29.0
9	Depreciation	400,000	175,090	43.8
10	Taxes	1,094,981	586,531	53.6
11	Operating Income (Return)	2,244,813	1,215,990	54.1
12	TOTAL COSTS	7,214,016	2,984,826	41.4

Schedule B - Table No. 1
Notes

Line 1 - In the 1944 cost study it was found that 73% of the hydro plant investment is in 25 cycle equipment and that 92% of this 25 cycle investment, or 67.2% of the total, is properly allocable to Baltimore. The various factors considered in reaching these conclusions are explained in the notes to Schedule A, Table No. 1 (Line 1). The same factors apply to the 1946 investment allocation, and the same allocation ratios used in the 1944 study are applied in this study.

Line 2 - No [redacted] of the steam plant cost has been allocated to Baltimore for the reasons discussed earlier herein.

Lines 4 and 5 - The Holtwood-Baltimore (Highlandtown) line and substation are used exclusively for 25 cycle service to Baltimore. A small amount of backfeed does come over these lines. On a net hourly basis, the amount in 1944 was only 555,000 kwhrs and in 1946, 1,673,000 kwhrs. The gross deliveries to Baltimore over this line are well in excess of 300 million kwhrs per year.

Line 6 - This line has no other use except for Baltimore. It is not directly connected with the interconnected system network.

Lines 7, 8 and 9 - The allocation of the investment in the Westport and Riverside lines and in Manor substation has been discussed at some length earlier herein. After consideration of the available information, the purpose of the lines, and their probable future use, 85% of the investment has been allocated to Baltimore. Further discussion of this allocation is contained in the notes to Schedule A, Table No. 1, Lines 7, 8 and 9.

Lines 10 and 11 - For the reasons already discussed herein, the entire investment in the Ellicott line and switching station is allocated to Baltimore.

Schedule B
Table No. 1
Notes

Line 12 - The 25 cycle investment in the Holtwood substation has been determined from the records of the company as $630,963. As in the 1944 study, 92% of this substation investment has been allocated to Baltimore.

Lines 13 to 25 - No part of the investment in these items of transmission plant has been allocated to Baltimore. These lines and facilities are for service to other utility customers and the Pennsylvania Railroad. Some of the interchange energy from these other customers might reach Baltimore, but no allowance is made for such instances since the amount would be relatively small.

Line 28 - Intangible and general plant has been allocated to Baltimore in proportion to the percent that the allocated total production and transmission is to the total plant.

Line 30 - The total working capital of $977,160 is composed of the following items (See Exhibit 23):

Materials and Supplies	$325,012
Coal	164,056
Cash	488,092

No part of the coal allowance is allocated to Baltimore. Materials and supplies are allocated in proportion to investment and cash in proportion to operating expenses as follows:

Item	Total	Percent to Baltimore	Amount to Baltimore
Materials and Supplies	$ 325,012	54.1	$ 175,831
Cash	488,092	41.9	204,511
Coal	164,056	0	-
Total	$ 977,160	38.9	$ 380,342

Line 32 - There is no breakdown in the record of the total depreciation reserve of $6,178,657. At transcript page 9899 there is a breakdown of the $6,000,000 reserve, as of 12/31/45.

Schedule B
Table No. 1
Notes

By applying the same ratios as are found in this breakdown, the reserve of $6,178,657 is divided as follows:

	Reserve
Hydro plant	$2,960,600
Steam plant	1,374,750
Transmission plant	1,596,150
General plant	247,157

The depreciation reserve as submitted by the company is not based on any age or service life formula. In fact, approximately $1,500,000 of the total $6,000,000 is an allowance or reserve for contingencies. Under the circumstances, the reserve applicable to the property allocated to Baltimore is apportioned on a per dollar of investment basis as follows:

Item	Total Reserve	Investment Ratio	Reserve Allocated to Baltimore
Hydro plant	$2,960,600	67.2%	$1,989,523
Steam plant	1,374,750	0	-
Transmission	1,596,150	55.0%	877,883
General	247,157	54.1%	133,712
Total	$6,178,657	48.6%	$3,001,118

Schedule B -- Table No. 2
Notes

Line 1 - The records of Penn Water do not show the amount of operation and maintenance separately for 25 and 60 cycle generating units and facilities. There are many items of expense which are common to the entire plant. This is particularly true of supervision and maintenance of structures. In addition there are a number of items of accessory equipment such as the exciter system, which are common to both 25 and 60 cycle operations.

After consideration of the various factors involved, it appears reasonable to allocate 76% of this item to 25 cycle operations. The relative 25 cycle generation is 75% of the total, the relative rated capacity 78.5%, and number of units, 80%. Using 76%, the amount allocated to 25 cycle is $306,200. Of this total, 92% or $281,704, is allocated to Baltimore in the same manner as the 25 cycle hydro investment was allocated.

Line 4 - The transmission expense for each of the major lines is available from company records. These expenses are allocated to Baltimore on the same basis as the investment allocation. The load dispatching and Holtwood substation expenses are split 50-50 between 25 and 60 cycle operations. Baltimore is allocated 92% of the 25 cycle expense. The detail of the allocation follows:

Item	Expense	Percent to Baltimore	Allocated to Baltimore
Westport and Riverside Lines and Manor Substation	$ 81,628	85.0	$ 69,384
Highlandtown Line and Substation and Gunpowder Line	146,705	100.0	146,705
Ellicott Line and Switching Station	13,686	100.0	13,686
Holtwood Substation	47,677	46.0	21,931
Load Dispatching Expense	37,699	46.0	17,342
Balance	81,088	0	
Total	$408,483	65.9	$269,048

Schedule B
Table No. 2
Notes

Line 5 - As outlined in the notes to Schedule A, Table No. 2 it was concluded that Administrative and General Expenses should be allocated 2/3 on the basis of investment and 1/3 on the basis of operating expenses. In 1946, however, the regulatory commission expense alone comprised over 1/3 of the total administrative and general expenses. In view of this fact, this part of the item is allocated separately in proportion to the investment and the balance allocated 2/3 in proportion to investment and 1/3 in proportion to operating expenses, as follows:

	Amount	Percent to Baltimore	Amount to Baltimore
Regulatory Commission Expense	$319,559	54.1	$172,881
Bal. Proportional to Investment	391,148	54.1	211,611
Bal. Proportional to Expenses	195,574	36.8	71,971
Total	$906,281	50.4	$456,463

Lines 6 and 7 - For the reasons previously outlined herein, no part of the payments made to Safe Harbor are allocated to Baltimore. The same reasons are applicable to the cost of purchased interchange.

Line 9 - At transcript page 4463, the total annual depreciation expense has been subdivided by major plant accounts. In the absence of any more detailed breakdown of this expense it has been allocated within each class of property in proportion to investment. The detail of the allocation follows:

Item	Total Depreciation Expense	Percent Allocation	Amount Allocated to Baltimore
Hydro plant	$ 130,000	67.2	$ 87,360
Steam plant	110,000	0	-
Transmission	130,000	55.0	71,500
General plant	30,000	54.1	16,230
Total	$ 400,000	43.8	$175,090

Schedule B
Table No. 2
Notes

Line 10- Taxes have been divided into four groups: (1) Pennsylvania taxes proportional to the investment in Pennsylvania, (2) Maryland taxes proportional to the investment in Maryland, (3) Federal taxes proportional to operating expenses and (4) Federal taxes proportional to the return or operating income. No part of the Pennsylvania gross receipts or PUC taxes are allocable to Baltimore.

For purposes of allocating the Maryland and Pennsylvania taxes, an analysis was made of the investment in each state and the proportion of such investment allocated to Baltimore herein. On the basis of this analysis, 48.4% of the Pennsylvania, and 84.4% of the Maryland taxes have been allocated to Baltimore.

A summary of the allocation made follows:

Item	Total Tax	Percent to Baltimore	Allocated to Baltimore
Pa. - Income, Capital Stk, Prop. & Misc.	$ 169,404	48.4	$ 81,992
Gross Receipts and PUC - Pa.	26,826	0	-
Md. - Income, Capital Stk, Prop. & Misc.	71,343	84.4	60,213
Federal - Unemployment and Old Age	27,060	41.9	11,338
Federal Income and Capital Stock	800,348	54.1	432,988
Total	$1,094,981	53.6	$ 586,531

Line 11 - The allocated return shown in Column 2 of this line is 6½% on the allocated investment plus working capital of $20,092,673, less 3% of the allocated depreciation reserve of $3,001,118.

( ) Denotes credit

General Notes:

The expenditures by Susquehanna Pole Line Companies, predecessors of Susquehanna Transmission Company of Maryland, are included at the date of the expenditure by the Pole Line Company instead of the date of the advance by the McCall Company to the Pole Line Company.

Additions for the month of August 1908 include a credit of $162,936.02 for the transfer of property and riparian rights below the dam in exchange for securities of Susquehanna Power Company and Susquehanna Properties Company.

The above expenditures include the values of McCall Company securities issued for properties, services, etc., in addition to cash expenditures.

Schedule F-3

PENNSYLVANIA WATER & POWER COMPANY

Statement Showing Disallowed Items Agreed To and Amount Protested by Company of Survey of Storage Reservoir Sites (Exhibit 51, Schedule 19)

Item No.	Explanation	Amount
	(a) Disallowances Conceded by Company in Exhibit 25	
	Water Conservation Association Expense	
1	Year 1912	$ 2,881.82
2	" 1913	8,163.36
3	Total	$11,045.18
	(b) Disallowances Agreed To by Company Since Preparation of Exhibit 25	
4	Olmstead and Stamm - Legal Opinions on Rights of Water Power Companies - 1911	$ 850.00
5	Interest During Construction Applicable to Item 2 Above	204.08
6	W. E. Bennett, 1909 Investigation of Reservoir Sites, which was paid in 1910	2,400.00
7	Total	$ 3,454.08
8	Total Disallowed Items Agreed To (Item 3 plus Item 7)	$14,499.26
	(c) Amount Protested by Company	
9	Cost of establishing and rating of new gauges, rating of existing gauges and determination of time relation data between gauges along the Susquehanna River Above the Holtwood Pond	$12,420.77
10	Grand Total	$26,920.03

Schedule G

PENNSYLVANIA WATER & POWER COMPANY

Statement Showing Legal and Investigation Expenses Incurred as a Result of Ejectment Proceedings Brought Against the Company With Respect to the Boyd Mill Property Boundary Dispute (Job C-973,1932)

Item No.	Explanation	Amount
1	Salary and expenses of witnesses for investigating old titles, preparing drawings and testifying as to proper boundary line	$ 623.78
2	Fee for consulting engineer's services for testifying as to proper boundary line	125.00
3	Legal fee	400.00
4	Court costs	278.64
5	Total	$ 1,427.42

Note: The above expenses were incurred in defending the Company's title to its land adjoing the Boyd Mill property and were erroneously charged to Operating Expenses. The Company lost the suit and subsequently purchased the Boyd Mill property.

Schedule H

PENNSYLVANIA WATER & POWER COMPANY

Loss of Materials and Supplies During the Original Construction Period to September 30, 1911

Item No.	Explanation		Amount
	Loss of Materials and Supplies		
1	McCall Ferry Power Co: Balance as of July 17, 1909 (Exhibit 51, Appendix 2, page 72)	$ 35,019.16	
2	Less: McCall Ferry Power Co. Materials and Supplies inventoried by J.E.Aldred Receiver	22,547.03	
3	Loss as Recorded by Receiver		$ 12,472.13
	Receiver's Materials and Supplies inventoried by P.W.&P.Co. from the following entries as shown in Exhibit 51, Sch. 11, Sheet 1:		
4	Mar.'10 J7 Sundry Stores as at Dec. 31, 1909	8,419.91	
5	'10 Various old cement used in construction during 1910, not previously inventoried	8,308.90	
6	Mar.'10 J7 Cement on hand at Dec. 31, 1909	6,535.01	
7	Total Receiver's Materials and Supplies inventoried by P.W.&P.Co.	23,263.82	
8	Less: J.E. Aldred Receiver Balance as of Dec. 31, 1909 (Ex. 51, Sch. 11)	14,854.39	
9	Total Gain in Materials and Supplies at Dec. 31, 1909 as recorded by P.W.&P.Co.		8,409.43
10	Net Loss in Materials and Supplies as of Dec. 31, 1909 (Item 3 Minus Item 9)		4,062.70
11	Loss Due to Receiver's "Write-down" of Cost of Cement		8,970.34
12	Total Loss		$ 13,033.04

Schedule I

PENNSYLVANIA WATER & POWER COMPANY

Analysis of General Expenses Incurred In Connection With The Use of Susquehanna Contracting Co. as a Separate Corporation

Item No.	Explanation	Amount
1	Fees to Simpson, Thacher & Bartlett	$2,875.38
2	New York City and State Taxes	93.02
3	Referee's Services - H. Odell	250.00
4	Salaries of Officers	3,095.00
5	Printing and Stationery	308.45
6	Total	$6,621.85

Schedule J

PENNSYLVANIA WATER & POWER COMPANY

Statement Showing Analysis of Portion of Holtwood Power Co. Organization Expense Disallowed By Staff and Agreed To By Company (Ex. 51, Sch. 24)

Item No.	Explanation	Total (b+c) (a)	Disallowance Agreed To (b)	Disallowance Protested (c)
	Lancaster Office Expense			
	M. E. Bushong Salary			
1	June 1924 to Aug. 15, 1925	$ 9,124.96	-	9,124.96
2	Aug. 16, 1925 to Dec. 31, 1925	3,000.05	3,000.05	-
3	Totals	$12,125.01	3,000.05	9,124.96
	Office Salaries, Expenses & Traveling			
4	June 1924 to Aug. 15, 1925	$ 5,760.53	-	5,760.53
5	Aug. 16. 1925 to Dec. 31, 1925	2,267.36	2,267.36	-
6	Totals	$ 8,027.89	2,267.36	5,760.53
7	Salaries & Traveling-Feb. 1925	$ 489.85	-	489.85
8	Total Lanc. Off. Exp.	$20,642.75	5,267.41	15,375.34
9	J. M. Groff, Legal Services	$ 2,000.00	2,000.00	-
10	S. R. Zimmerman Legal Services	2,500.00	-	2,500.00
11	Simpson, Thacher & Bartlett Legal Services	3,070.59	3,070.59	-
12	Grand Totals	$28,213.34	10,338.00	17,875.34

Exhibit No. 320 [24054]

Schedule K

PENNSYLVANIA WATER & POWER COMPANY
and Susquehanna Transmission Company of Maryland, A Wholly Owned Subsidiary

Summary of Physical Items of Property
Originally Accounted For Incorrectly

Item No.	Explanation	Amount
1	Betterments arising through minor items (Schedule K-1)	$ 26,153.33
2	Additions (Schedule K-2)	41,541.47
3	Replacements, including betterments in new units (Schedule K-3)	28,422.04
4	Total	$ 96,116.84

PENNSYLVANIA WATER & POWER COMPANY

And Susquehanna Transmission Company of Maryland, A Wholly Owned Subsidiary

Summary of Betterments, Arising Through Minor Items
Charged in Error to Operating Expenses
or to Reserve for Depreciation

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Charged in Error to Operating Expenses (b)	Total (a+b) (c)
1	1923	C-193	Replacement of the Property Signs			
			Excess cost of enameled signs over the estimated cost at current prices of varnished and baked signs being replaced.	$ 336.24	$ -	$ 336.24
2	1924	K-300	Cooling Coils for Nos. 2,3,4,&8 Transf. - Hn.			
			Excess cost of copper cooling coils over estimated cost at current prices of brass coils being replaced.	5,331.95	-	5,331.95
3	1925	K-241-1	Repairs to #6 Transformer Cooling Coils - Hn.			
			Excess cost of copper cooling coils over estimated cost at current prices of brass coils being replaced.	952.80	-	952.80
4	1925	K-300-1	Cooling Coils for #7 Transformer - Highlandtown			
			Excess cost of copper cooling coils over estimated cost at current prices of brass coils being replaced.	467.03	-	467.03

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Operating Expenses (b)	Total (a+b) (c)
9	1929	K-797	New Rail for Sidings at Holtwood			
			Excess cost of 85# rail over the estimated cost at current prices of 60# rail being replaced.	$ 2,140.40	$ -	$ 2,140.40
10	1929	K-845	Modify #6 Transformer L.T. Oil Circuit Breaker			
			Excess cost of 1,200 amp. O.C.B. parts over the estimated cost at current prices of 800 amp. parts being replaced.	744.81	-	744.81
11	1929	M-1010	Improvements to #5 Turbine			
			Excess cost of lower pedestal bearing (of improved design and material) for operating shaft over the estimated cost at current prices of the old type bearing being replaced.	-	1,121.00	
			Excess cost of rubber guide bearing and split ascoloy sleeve over the estimated cost at current prices of the old lignum vitae bearing and solid sleeve being replaced.	-	2,405.65	3,526.65
12	1929-1930	M-1004	Resplicing Cables - Baltimore Line			
			Excess cost of aluminum compression joints over the estimated cost at current prices of the twisted joints being replaced.	-	709.20	
			Additional cost of 394 repair sleeves applied over the twisted splices to improve joints.	-	275.80	985.00

[240571] Exhibit No. 320 4051

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Charged in Error to Operating Expenses (b)	Total (a+b) (c)
5	1928	H-596	Repairs to #6 Transformer - Holtwood			
			Excess cost of copper cooling coils over estimated cost at current prices of brass coils being replaced.	$ 1,364.00	$ -	
			Excess cost of 15,000 Kva. coils over the estimated cost at current prices of 10,000 Kva. coils being replaced. (See also claim under "Additions".)	2,576.11	-	$ 3,940.11
6	1929	K-644	Generator Room Crane - New Controller & Cab			
			Excess cost of improved cab over the estimated cost at current prices of old cab being replaced.	318.00	-	
			Excess cost of new magnetic controller over the current cost of old controller being replaced.	582.00	-	900.00
7	1929	K-772	Install Copper Bus #1 Sect. H.T. Bus Room			
			Excess cost of 3/4" I.P.S. copper (plus cost of tees and couplings) over the estimated cost at current prices of the 1/2" copper tubing being replaced.	-	202.22	202.22
8	1929	K-786	Install Copper Bus #2 Sect. H.T. Bus Room			
			Excess cost of 3/4" I.P.S. copper (plus cost of couplings) over the estimated cost at current prices of 3/4" copper tubing and 1/2" I.P.S. copper being replaced	-	133.35	133.35

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Operating Expenses (b)	Total (a+b) (c)
17	1930	M-1032	Coal Preparation Plant - Extension - Improvements			
			Excess cost of a #29 improved exhaust fan with greater capacity over the actual current cost of a #25 fan being replaced.	$ -	$ 267.71	$ 267.71
18	1930	*R-3037	Holtwood Hydro Turbine & Governor Maintenance			
			Excess cost of rubber guide bearing and split ascoloy sleeve for #11 exciter turbine over the estimated cost at current prices of the lignum vitae bearing and solid sleeve being replaced.	-	730.00	730.00
19	1931	M-1041	New Rubber Guide Bearing & Sleeve #7 Unit			
			Excess cost of rubber lined guide bearing and split ascoloy sleeve over the estimated cost at current prices of the lignum vitae bearing and solid sleeve being replaced.	-	2,803.00	2,803.00
			Totals	$14,813.34	$11,339.99	$26,153.33

*Refers to maintenance account number.

Page 5 of 5

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Operating Expenses (b)	Total (a+b) (c)
13	1929-1930	M-1009	#13 Exciter Rubber Bearing & Flexible Coupling			
			Excess cost of rubber lined guide bearing and split ascoloy sleeve over the estimated cost at current prices of the old lignum vitae bearing and solid sleeve being replaced.	$ -	$ 755.94	$ 755.94
14	1930	M-1022	#3 Turbine - New Lower Pedestal Brg. & Vane Adj.			
			Excess cost of lower pedestal bearing (of improved design and material) for operating shaft over the estimated cost at current prices of the old type bearing being replaced.	-	1,119.00	1,119.00
15	1930	M-1020	Equipment Changes - Nos. 62 & 63 Cables			
			Excess cost of 1" I.P.S. copper over the estimated cost at current prices of the 1" thin wall tubing being replaced.	-	40.69	
			Excess cost of 600 A. parts for disconnecting switch over estimated cost at current prices of 300 A. parts being replaced (plus cost locks purchased for 600 A. switch).	-	220.11	260.80
16	1930	M-1028	Modify Governor Restoring Mechanism - #5 Unit			
			Excess cost of governor restoring mechanism (of improved design and material) over the estimated cost at current prices of the old mechanism being replaced.	-	556.32	556.32

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Operating Expenses (b)	Total (a+b) (c)
5	1927	K-583	Turbine #3 - Vanes and Fulcrum Pins			
			Bore vanes and install bronze bushings for fulcrum pins. Also install bronze sleeves on fulcrum pins to suit. (40 fulcrum pins per unit) Counterbore lower end of vanes and lower distributor rings. Fabricate and install ascoloy steel thrust discs. (80 thrust discs per unit).	$ -	$ 4,775.65	$ 4,775.65
6	1927	K-269-2	"A" Low Tension Bus Reactors - Highlandtown			
			Extension of cables and associated equipment incidental to moving reactors to permit the installation of an O.C.B. in the reactor circuit in addition to the disconnect switches (which could not be opened under load).	2,015.98	-	2,015.98
7	1928	H-596	Repairs to #6 Transformer - Holtwood			
			Addition of temperature indicating equipment and insulating oil incidental to rewinding this transformer from 10,000 Kva. to 15,000 Kva. (See also claim under "betterments").	1,452.32	-	1,452.32
8	1928	C-610	Frazil Ice Experiments - Electrically Heated Screens			
			Fabrication of an experimental electrically heated trash screen leading to the permanent installation on Exciter Unit #13 (C-2091-1939).	-	1,831.61	1,831.61

[24061] Exhibit No. 320 4055

PENNSYLVANIA WATER & POWER COMPANY
And Susquehanna Transmission Company of Maryland, A Wholly Owned Subsidiary

Summary of Additions
Charged in Error to Operating Expenses
or to Reserve for Depreciation

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Charged in Error to Operating Expenses (b)	Total (a+b) (c)
1	1922	*R-3032	Maintenance of Turbine & Governor Mechanism(#5 Unit) - Bore vanes and install bronze bushings for fulcrum pins. Also install bronze sleeves on fulcrum pins to suit. (40 fulcrum pins per unit) See also J.O. M-1037 below.	$ -	$ 2,887.03	$ 2,887.03
2	1923	C-158	Replacement of Floating Flashboard Equipment			
			Outright addition of scow.	545.64	-	
			Above scow scrapped in 1942.	(545.64)	-	0
3	1926	C-359	New Lead Covered Cable for Exciters			
			Engineering study for exciter cables (See K-646 below).	304.71	-	304.71
4	1927	K-550	Flashboard Improvements - East End of Dam			
			Addition of flashboard sockets in 300' of crest of dam to change from 5'0" centers to 2'6" centers (to make 2'6" centers across full length of dam).	-	1,235.43	1,235.43

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Operating Expenses (b)	Total (a+b) (c)
14	1929	K-646	Exciter Cables Replacement			
			Addition of one 1,500 M.C.M. lead covered cable per leg, for exciters #11 and #13, together with the necessary conduit and pull boxes. This addition resulted from engineering studies made under C-359 and C-625 above.	$ 2,553.96	$ -	$ 2,553.96
15	1929	*71.59	Piping, Regulators, Etc.			
			Cost of modernizing 2 type C-16 Bailey flow meters by conversion to type C-6 (to use circular chart instead of strip chart, etc.)	-	240.00	240.00
16	1929-1930	M-1012	No. 11 Exciter - Improvements to Vanes and Pins			
			Bore vanes and install buchings for fulcrum pins. Also install bronze sleeves on fulcrum pins. (14 fulcrum pins per unit).	-	576.55	576.55
17	1929-1930	M-1013	Improvements to No. 6 Turbine Vanes & Fulcrum Pins			
			Bore vanes and install bronze bushings for fulcrum pins. Also install bronze sleeves on fulcrum pins to suit. (40 pins per unit) Counterbore lower end of vanes and lower distributor rings. Fabricate and install rustless iron thrust discs. (80 discs per unit)	-	4,202.78	4,202.78
18	1930	K-792	Lightning Arresters - Nos. 1, 2, 5 & 6 Circuits (Holtwood)			
			Addition of screen enclosure incidental to moving arresters from indoor to outdoor location.	205.00	-	205.00

[24063]
Exhibit No. 320
4057

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Charged in Error to Operating Expenses (b)	Total (a+b) (c)
9	1928	M-633	No. 13 Exciter Vanes			
			Bore vanes and install bronze bushings for fulcrum pins. Also install bronze sleeves on fulcrum pins to suit. (14 fulcrum pins per unit).	$ -	$ 816.88	$ 816.88
10	1928	C-759	Turbine No. 1 - Chipping Back Outflow Edge			
			Cost of chipping back outflow edges of turbine runner to increase turbine efficiency.	-	725.50	725.50
11	1928	M-1003	Relocation of Test Laboratory in B.E.A. Bin Bldg.			
			Additions to power, telephone and testing facilities incidental to the relocation of test laboratory at Highlandtown.		1,019.80	1,019.80
12	1928	M-620	Turbine Vanes & Fulcrum Pins #1 Turbine - Repairs			
			Bore vanes and install bronze bushings for fulcrum pins. Also install bronze sleeves on fulcrum pins to suit. (40 pins per unit) Counterbore lower end of vanes and lower distributor rings. Fabricate and install rustless iron thrust discs. (80 discs per unit).	-	3,458.30	3,458.30
13	1928	C-625	Exciter Cables and Switchboard Engineering Study			
			Engineering study for exciter cables (continuation of C-359 above). (Also engineering study for J.O. K-753 - "Exciter Board Ventilation" allowed by staff in Entry 23, Schedule 8, Exhibit 51)	601.83	-	601.83

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Charged in Error to Operating Expenses (b)	Total (a+b) (c)
19	1930	K-865	Stoplogs for Ice Chute - Shore End			
			Addition of stoplogs in emergency headgate slot.(Those installed originally were retired in 1938 when timber stoplogs in headgate slot were replaced with steel).	$ 807.97	$ -	$ 807.97
20	1930	K-913	Modification of Pull Boxes Nos. 20 & 21			
			Additions to pull boxes Nos. 20 & 21 (The amount shown here represents charges against this J.O. incurred in 1930 and incorrectly charged to the Depreciation Reserve. Subsequent costs under this J.O. were correctly charged to Electric Plant.)	409.61	--	409.61
21	1930	M-893	Alterations to Rooms 1603 & 1605 Lexington Building			- -
			Addition of Celotex ceiling, walnut paneling, linoleum, etc. - Rooms 1603-05.	-	3,979.90	3,979.90
22	1930	M-1037	Install Vanes & Counterbore Distributor Rings - #5 Unit			
			Counterbore lower distributor rings and vanes and install thrust discs. (80 thrust discs per unit).	-	760.20	760.20
23	1931	M-2039 M-1042	Improvements for #7 Unit Turbine			
			Counterbore lower distributor rings and fabricate and install thrust discs. (80 thrust discs per unit)	-	1,065.99	1,065.99
24	1932	K-967	No. 4 Turbine - Install Spare Set of Vanes			
			Counterbore lower distributor rings and fabricate and install thrust discs. (80 thrust discs per unit).	1,290.45	-	1,290.45

Item No.	Year of Expenditure	Job Order	Title of Job Order and Description of Item	Charged in Error to Reserve for Depreciation (a)	Charged in Error to Operating Expenses (b)	Total (a+b) (c)
25	1935	K-1142 M-1412	Improvements for #2 Unit Turbine			
			Counterbore lower distributor rings and fabricate and install thrust discs. (80 thrust discs per unit)	$ 1,028.94	$ 304.84	$ 1,333.78
26	1912 1913 1914	None	Construction Plant Buildings			
			Balance of Construction Plant Buildings Account	- -	2,990.24	2,990.24
			Totals	$10,670.77	$30,870.70	$41,541.47

Schedule L

March 6, 1913.

To the Trustees of the
Holtwood Presbyterian Church,
Mr. A. J. Rennex, Chairman,
Holtwood, Pa.

Dear Sir:-

Appreciating the necessity for a suitable church building at Holtwood, as expressed by our employees in contributing and securing one half of the necessary funds for the completed building and furnishings, as shown by your letter and report under date of February 21, 1913 - The Pennsylvania Water & Power Company agrees to contribute the balance required, ($1,400.) - under the following conditions. That is to say, that in accepting this contribution of $1,400., the Trustees of the Holtwood Presbyterian Church agree, -

1st,- That the church will be fully completed and furnished free from debt.

2nd,- That should it become desirable, the basement shall be accessible for general educational purposes.

3rd,- That the property shall be deeded to the Trustees and their successors.

4th,- That should the Society cease to use the building for church purposes, the property shall revert to the Pennsylvania Water & Power Company.

Congratulating you and your associates upon the successful outcome of your efforts and assuring you that a check for $1,400. will be forwarded to your Treasurer, upon your written acceptance of the terms of the contribution, I beg to remain,

Very truly yours,

CEFC/P

VICE-PRESIDENT.

J. E. Aldred

In Reply Please Address

March 12, 1913.

Mr. Chas. E. F. Clarke, Vice President,

Penna. Water & Power Co.,

New York, N. Y.

Dear Sir:-

Your letter of March 6th to hand and contents noted, and in reply would say, that in acceptance of the liberal subscription of Fourteen hundred dollars ($1400.00), to be given by the Pennsylvania Water & Power Company, to further aid in completing and furnishing the Holtwood Presbyterian Church, We the Trustees do hereby accept and agree to the conditions named therein.

Trusting the above will meet with the necessary requirements in securing the sum stated and with many thanks, we beg to remain

Yours very truly,

A. J. Rennex
H. F. Herr Trustees

Schedule L

PENNSYLVANIA WATER & POWER COMPANY

HOLTWOOD CHURCH

Under the section, Form of Government, as set forth in the Constitution of the Presbyterian Church in the U.S.A., Chapter XXVII, Sec. IX, appears the following:

> "Whenever, hereafter, a particular Church is formally dissolved by the Presbytery, or has become extinct by reason of the dispersal of its members, the abandonment of its work, or other cause, such property as it may have, both real and personal, shall be held used, and applied for such uses, purposes and trusts as the Presbytery may direct, limit and appoint in conformity with the Constitution of the Presbyterian Church in the U.S.A."

The land on which Holtwood Church is located was never conveyed to the Trustees because the above quoted provision of the Constitution of the Presbyterian Church, to which Holtwood Church was subject, prevented the Trustees accepting title as limited by the 4th provision set forth in the letter of March 6, 1913 from the Company to the Trustees.

Pennsylvania Water & Power Company
PERCENTAGE FLUCTUATIONS IN RATE BASE ON THE SINKING FUND BASIS COMPARED WITH PERCENTAGE FLUCTUATIONS IN RATE BASE ON THE STRAIGHT LINE AND ON THE COMPOUND INTEREST BASES AT 3, 4½ AND 6 PERCENT
1946-2010

(Total Electric Plant Investment in 1946 equals 100 Percent)

Pennsylvania Water & Power Company
ANNUAL RATES OF RETURN ACTUALLY EARNABLE AND DEFICIENCY IN RETURN ON THE STRAIGHT LINE BASIS
On Total Investment in Property at Cost Plus $620,000 Working Capital
For Every Tenth Year 1946-2005 and for the Year 2010

Assuming: (1) An intended 6½ percent fair rate of return;
(2) Deduction of straight line accrued depreciation reserve balance;
(3) Retirements of property at F. P. C. life estimates;
(4) No income, two and three percent earnings on reserve investment.

Year	Total Investment in Rate Base	Accumulated Depreciation Reserve on Straight Line Basis	Investment less Depreciation Reserve	6½% Return on Investment	6½% Return on Investment less Reserve	Deficiency in Return	Actually Earnable Rate of Return and Deficiency in Return When the Income from Reserve Investment is: 0 Percent Rate Earned	0 Percent Deficiency (Percent)	2 Percent Rate Earned	2 Percent Deficiency (Percent)	3 Percent Rate Earned	3 Percent Deficiency (Percent)

Pennsylvania Water & Power Company
AVERAGE CUMULATIVE RATES OF RETURN ACTUALLY EARNABLE AND DEFICIENCY IN RETURN ON THE COMPOUND INTEREST BASIS AT THREE, FOUR-AND-ONE-QUARTER AND SIX PERCENT
On Total Investment in Property at Cost Plus $620,000 Working Capital
For Periods Ending with Selected Years 1946-2010

Assuming: (1) An intended 6½ percent fair rate of return;
(2) Deduction of compound interest accrued depreciation reserve balance;
(3) Retirements of property at F. P. C. life estimates;
(4) No income, two and three percent earnings on rpeserve investment.

Period	Average Investment in Rate Base	Average Accumulated Depreciation Reserve on Compound Interest Basis	Average Investment less Depreciation Reserve	6½% Return on Investment	6½% Return on Investment less Reserve	Deficiency in Return	Actually Earnable Rate of Return and Deficiency in Return When the Income from Reserve Investment is: 0 Percent Rate Earned	0 Percent Deficiency (Percent)	2 Percent Rate Earned	2 Percent Deficiency (Percent)	3 Percent Rate Earned	3 Percent Deficiency (Percent)

E-3

Pennsylvania Water & Power Company
ANNUAL RATES OF RETURN ACTUALLY EARNABLE AND DEFICIENCY IN RETURN
ON THE SINKING FUND BASIS AT THREE, FOUR-AND-ONE-QUARTER AND SIX PERCENT
On Total Investment in Property at Cost Plus $620,000 Working Capital
For Every Tenth Year 1946-2005 and for the Year 2010

Assuming: (1) An intended 6½ percent fair rate of return;
(2) Income deduction of sinking fund interest component;
(3) Retirements of property at F. P. C. life estimates;
(4) No income, two and three percent earnings on reserve investment.

Year	Total Investment in Rate Base	Accumulated Sinking Fund Reserve	6½% Return on Investment	Interest Component - Annual Credit to Depreciation Reserve	Return after Deduction of Interest Component	Deficiency in Return	Actually Earnable Rate of Return and Deficiency in Return When the Income from Reserve Investment is: 0 Percent Rate Earned	0 Percent Deficiency (Percent)	2 Percent Rate Earned	2 Percent Deficiency (Percent)	3 Percent Rate Earned	3 Percent Deficiency (Percent)

AVERAGE CUMULATIVE RATES OF RETURN ACTUALLY EARNABLE AND DEFICIENCY IN RETURN UNDER ALTERNATIVE METHODS OF DEPRECIATION RESERVE ACCRUAL

On Total Investment in Property at Cost Plus $620,000 Working Capital

For Periods Ending with Selected Years 1946-2010

Assuming: (1) An intended 6½ percent fair rate of return;
(2) Deduction of straight line and compound interest accrued depreciation reserve balances; and income deduction of sinking fund interest component;
(3) Retirements of property at F. P. C. life estimates;
(4) No income, two and three percent earnings on reserve investment.

	Actually Earnable Rate of Return and Deficiency in Return with:																	
	No Income from Reserve Investment						Two Percent Earned on Reserve Investment						Three Percent Earned on Reserve Investment

10. Total effective hydro capacity	104	104	104	104	104	104	104
11. 25 cycle hydro generation on hydro peak hour	84	88	87	84	86	86	85
12. 60 cycle hydro generation on hydro peak hour	25	25	24	26	25	25	25
13. Total hydro generation on hydro peak hour	109	113	111	110	111	111	110
14. 25 cycle delivery to Baltimore (max. hour) (b)	76	76	76	77	77	76	77
15. 25 cycle delivery to Lancaster (max. hour) (b)	9(c)	8	10	7	8(d)	8	7
16. 25 cycle delivery to freq. changers (max. hour)	14	14	14	15	16	15	16
17. 25 cycle received from freq. changers (max. hour)	11	12	13	12	12	12	12
18. 25 cycle delivery to Baltimore (hydro peak hour) (b)	70	64	69	67	69	68	72
19. 25 cycle delivery to Lancaster (hydro peak hour) (b)	4	5	4	2	1	3	3
20. 25 cycle delivery to freq. changers (hydro peak hour)	0	8	2	4	8	5	0
21. 25 cycle sta. uses & transm. losses (hydro peak hour)	10	11	12	11	8	10	10
22. 25 cycle hydro generation (hydro peak hour)	84	88	87	84	86	86	85

Note a - The hydro generations at Holtwood shown for the 5 year average, 1941 to 1945 incl., and for the single year 1946, are approximately equal to the average generation expected from long records of river flow.

Note b - Actual deliveries, which are less than sendouts measured at Holtwood by about 6 to 10%.

Note c - A peak of 17 Mw. was not used due to abnormal conditions. (2 circuits to Baltimore out of service to permit work by Baltimore Company)

Note d - A peak of 9 Mw. was not used due to its occurrence during heat run.

Results of Certain Corrections Made to Exhibit 64

Introduction

The allocation of Penn Water's cost made by the Commission Staff and testified to by Mr. G. H. Davis is shown in Exhibit 64.

The effect of the following three corrections to Exhibit 64 was shown by Exhibit 292, consisting of a revised Table VI of Exhibit 64.

1. Revision of the allocation of the Perryville Line between Baltimore Company and the P.R.R.

2. Separation of Manor Substation from "Balance of Transmission" and allocation of this substation in the same manner as the 220 kv. lines.

3. Recognition of the fact that backfeed received from Baltimore Company increased Penn Water's energy resources and thus increased the amount of energy which was supplied by Penn Water to Baltimore Company.

Counsel for the Staff of the Commission supplied photostatic copies of the following revised parts of Exhibit 64: Tables I, II, III, IV, V and V-c. These six revised worksheets are included as part of this report and they are referred to herein as Tables I, II, III, IV, V and V-c.

The results shown in Exhibit 292 also related to changes in Tables V-B and V-d of Exhibit 64 (T-11292-11295 and 11357). These two tables have been revised and are included as part of this report, and they are referred to herein as Tables V-B and V-d.

Purpose of this Report

The purpose of this report is to show the effect of certain corrections made to Exhibit 64 and in the results shown in Exhibit 292. The corrections have been made in several steps; and certain other errors are

listed, but their correction is not carried out in detail.

In this report parts of the data and of the methods of Exhibit 64 are used, but such use in no way indicates agreement with those data or methods. The intent is to show, for illustrative purposes only, by the use of 1944 data and the general methods contained in Exhibit 64, the allocation of the overall amount of rate reduction for Penn Water found in Exhibit 64, with corrections herein made limited by the scope of that exhibit.

Summary of Results

The corrections made all reduce the computed excess of the revenue from Baltimore Company over the allocated cost to Baltimore Company. Starting with Exhibit 292, this excess determined by the Witness Davis was $1,815,848 or 66.8% of the overall reduction shown in that exhibit. Corrections made in this report bring the excess of revenue over costs allocated to Baltimore Company to $1,080,505 or 39.7% of the assumed overall reduction. Additional errors, if corrected, would further reduce the computed excess of revenue over costs allocated to Baltimore Company.

Transmission Losses, Special Facilities, Conowingo Payment (Revision R-1)

This first group of corrections relates to:

(a) Correction of the amount of transmission losses,

(b) Correction for cost of special facilities provided by Safe Harbor for use of the P.R.R. in Maryland, and

(c) Correction in connection with the Conowingo back-water payment.

Revision of Tables

To carry out the correction of these three errors, Tables IV, V, V-A, V-d, VI and VI-a have been revised. The revised sheets are included as part of this report and have been designated by the addition of R-1 to each table number. Wherever necessary, they are referred to as Table IV-R-1, V-A-R-1, etc.

In the preparation of these revised sheets another minor revision has been made in the form thereof, but not in the data or results involved. This has been the addition of the $501,268 (shown in column 6 of Table VI, being there related to the "Energy Supply from Baltimore") as an adjustment to the "Total Cost" for the Pool in line 6, Table IV-R-1 and to the "Total Pool Cost" in column 5 of line 20 of Table V-R-1. This change permits the inclusion of the $501,268 in the energy costs summarized at the bottom of Table V-R-1. The use of this amount, relating to "Energy Supply from Baltimore", in this particular fashion is not an endorsement of its correctness. The change is made to improve the form of presentation.

The revised Table VI-R-1 involves changes in costs allocated to and revenue received from Baltimore Company. The net result of these changes is a reduction of $171,895 in the excess of revenue over costs allocated to Baltimore Company.

Transmission Losses

The witness Davis testified (T-12010) that a change in transmission losses from 23,000 to 18,000 kw. would increase the "Balance available for Baltimore from Holtwood Co.", shown in line 29, Table V-A of Exhibit 64, from 10,820 kw. to 13,760 kw.

Correction in connection with a change in losses from 23,000 kw. to 18,000 kw. has been made beginning with a change in line 10, column 5 of Table V-A-R-1, and continuing in column 1, lines 5 and 6 of Table V-d-R-1 and in column 2, lines 1 to 5 of the same Table. The revised figures in Table V-d-R-1 are then used in making changes in line 26, column 3 of Table V-R-1 and in several of the columns of Table VI-R-1.

Safe Harbor's Special Facilities for P.R.R.

In connection with the excess of cost of 25 cycle, single phase service at Safe Harbor, over the cost of 60 cycle 3 phase service the witness Davis testified (T-11775) "it probably could be said that it is most accurate to segregate this excess cost and assign it proportionately to the railroad service in Pennsylvania and in Maryland on the same basis as the allocation of the Conestoga Substation. If this method were to be followed, it would reduce the pool costs by $46,900, and increase costs allocated to Baltimore by 39 per cent of this amount, or $18,291 and increase costs assigned to the railroad for service in Pennsylvania by 61 per cent, or $28,609."

Corrections have been made to reflect this segregation of this excess cost of 25 cycle facilities at Safe Harbor. In line 2 of Table IV-R-1, which line is entitled "Bill for Safe Harbor Power," the allocation to the Pool, column 6, is reduced and direct allocations are made to the P.R.R. (add $28,609 in col. 4) and to Baltimore (add $18,291 in col. 5). The totals in line 6, columns 4, 5 and 6, are correspondingly changed, and these corrections are carried through Table V-R-1, beginning with line 19 and Table VI-R-1.

- 5 -

Conowingo Backwater Payment

The entire amount of $133,750 paid annually to Penn Water by Susquehanna Electric Company was included in the revenue from Baltimore Company in Table VI of Exhibit 64 and also in Exhibit 292. The inclusion of this amount as revenue from Baltimore Company is incorrect.

The revenue Baltimore Company pays Penn Water is based in part on the amount of net power revenue of Penn Water in the year 1930, with certain adjustments described in Article III(a) of the 1931 Agreement. If the Conowingo backwater agreement had not been made prior to 1930, the amount of net power revenue in that year would have been less and the base figure in the computation of the bill to Baltimore Company would be less. Consequently it is not correct to say that, in the absence of the Conowingo backwater agreement, Baltimore Company would today pay to Penn Water $133,750 or any other amount in excess of what they actually pay.

By the Conowingo agreement, made in 1926, Penn Water gave up certain resources that would otherwise have been available for service to all its customers. It receives in return certain annual payments which are a benefit to Penn Water itself. Either Penn Water should retain this benefit for itself or the payment should serve to reduce the cost to all its customers in proportion to their use of the hydro production facilities at Holtwood.

In Table IV-R-1, the Conowingo payment is shown as a credit against the total cost of service to the Pool and in Table V-R-1 as a credit against the Hydro Production Cost. In Table VI-a-R-1 the payment is omitted from the total of "Revenue shown for Baltimore." The changes carry through to the results shown in Table VI-R-1.

Allocation of Costs Based on Baltimore Company's Use of Capacity in Excess of Dependable Capacity (Revision R-2)

The next change in Exhibits 64 or 292 that is herein considered is the correction of the allocation of costs, shown in Table V, between capacity and energy costs. Mr. Davis allocated 32.5% of the Hydro costs to energy on the basis that 32.5% of the installed capacity was capacity in excess of the dependable capacity and that this excess capacity "can be considered as installed for the primary purpose of producing additional energy during periods of high river flow" (T-1190, line 10). This excess capacity and additional energy produced during periods of high river flow is used by Baltimore Company or is sold as interchange, the revenues from which reduce the payments made by Baltimore Company to Penn Water.

This correction of costs to reflect Baltimore Company's use of the 32.5% of installed capacity in excess of dependable capacity requires revision of Tables V, V-C, and VI. The revised sheets are identified by the addition of R-2 to the table numbers. This revision incorporated changes made previously in this report and shown on sheets designated R-1.

The principal change required to make this correction is that the 32.5% of hydro production costs shown in line 24 of Table V-R-2 should be charged directly to Baltimore Company. The 67.5% of the hydro cost, allocated in Exhibit 64 as capacity cost, must be allocated to all the firm customers on the basis of their use of the dependable hydro capacity. Although this use involves both capacity and energy, and although costs should be allocated in accord with both such uses, Mr. Davis has considered this to be a capacity cost. Consequently it is also considered here to be a capacity cost, avoiding for the present the necessity for allocation of a fixed cost between

capacity and energy.

The variable steam cost and cost of backfeed energy are then the only costs shown in Exhibit 64 that are to be allocated here on the basis of energy.

Since most of the energy that Baltimore Company obtains (376,917,000 kwh. being the revised amount determined by Mr. Davis and shown in Exhibit 292) is not related to its use of the dependable hydro capacity allocated to Baltimore, it is proper to recognize this fact in the allocation of the Holtwood steam cost and the assumed energy cost of backfeed from Baltimore Company. Such recognition might be given by assuming that the energy directly related to Baltimore Company's use of dependable hydro capacity allocated to it is such as to produce a load factor of about 60%, this being somewhere near the average of the other customers. On this basis Baltimore Company would receive, what might be called for purposes of this computation "firm energy," an amount of about 73,000,000 kwh. (8784 hrs. x 13760 kw. x 60%). This amount of "firm energy" is shown on line 5 of Table V-d-R-2. The total firm energy supply, shown in line 6 of the same table, over which we must spread the steam and backfeed cost is then about 810,000,000 kwh. The balance of the energy supplied to Baltimore Company, which amounts to 303,917,000 kwh. and which is, for the present, considered to be associated with Baltimore's use of the excess capacity, is shown in line 7.

Changes can now be made at the bottom of Table V-R 2 in the computation of the unit cost for energy. The unit cost for capacity does not change from that computed for Revision R-1.

In Table VI-R-2, the cost to Baltimore Company for the use of

the capacity in excess of dependable capacity, $781,460, is set forth as a separate item. These services would include considerable capacity that is needed and used by Baltimore Company, energy in the amount of about 303,917,000 kwh., and other electric services. Relating the cost to energy alone results in a rate of 2.6 mills.

As a matter of fact, however, not all of this 303,917,000 kwh., or even all the other services in excess of those supplied from Baltimore Company's allocated portion of the dependable capacity, are supplied from "capacity in excess of dependable capacity." A large part of the services supplied to Baltimore Company is supplied from the dependable capacity allocated to others. In high flow, a considerable part of the energy for Baltimore (including energy used for interchange) is generated by the dependable capacity allocated to the other customers at times when the loads of these other customers are less than their allocated capacities. At other times this dependable capacity allocated to others is used to provide spinning reserve and reactive capacity for Baltimore Company. The cost of these services is not included in the amount of $781,460 directly allocated to Baltimore Company. For this reason the results in Table VI-R-2 are illustrative only of a partial correction on the basis of Baltimore Company's use of facilities. They do not provide a proper allocation of cost, even on the assumption that Baltimore Company does use all the "capacity in excess of dependable capacity," for in fact it uses even more services than this capacity can provide

Redefinition of Use of Pool Facilities (Revision R-3)

Hydro plants such as Holtwood and Safe Harbor are built to provide sources of both capacity and energy as well as other services. They are operated today for those purposes. Mr. Spaulding testified that a 50-50

division of total hydro costs between capacity and energy is reasonable. He also testified that a similar division should be made of the Holtwood steam plant costs and certain transmission plant costs.

An allocation on this basis, without any additional changes, can be made quite simply. The capacity and energy costs at the bottom of Table V-R-1 must be redetermined and corresponding corrections made to VI-R-1. The two revised sheets are designated V-R-3 and VI-R-3. In this revision there are incorporated all the revisions in the R-1 tabulations but none of the revisions in the R-2 tabulations. As compared with Table VI-R-1, Table VI-R-3, shows a reduction in the excess of revenue from Baltimore over the allocated costs amounting to $229,488.

Corrected Statement of Dependable Capacity (Revision R-4)

The next changes that were made relate to dependable capacity: (1) correction of the amount of dependable capacity, and (2) correction of the division of dependable capacity between Holtwood and Safe Harbor. The dependable capacity, resulting from the coordinated operation of Areas 5 and 6, available to the combined Area 6 and Penn Water's and Safe Harbor's firm Pennsylvania customer loads for the condition of most adverse flow at the time of the December peak, and with dependence on drawdown for a relatively small part of this capacity, was 292,000 kw. This results from the deduction of 26,000 kw. made available to Area 5, from the 324,000 kw. shown in Schedule 16 of the Penn Water-Safe Harbor Form 12 Report for 1944. The utilities in Area 5 relied on this 26,000 kw. capacity from Area 6 as their share of the benefits from coordinated operation. The witness Watchorn testified that 100,000 kw. of the Holtwood hydro capacity is dependable and is unrelated to the installed or to the dependable capacity at Safe Harbor.

These corrections in dependable capacity require a complete revision of Table V-A-R-1, revision of lines 5 and 6 of V-d-R-1, and change in the unit cost of capacity on Table V-R-3 (without change in the amount of the capacity and energy costs from those computed previously for the 50-50 split of costs shown on Table V-R-3). These revised tables have been designated by the addition of R-4 to the table numbers. As compared with Table VI-R-3, Table VI-R-4 shows a further increase in costs allocated to Baltimore Company amounting to $333,960.

Up to this point the excess of revenue from Baltimore Company over costs allocated to Baltimore Company has been reduced by about $925,000. This reduction is shown by comparison of the original Table VI of Exhibit 64 with Table VI-R-4 of this report. The approximate difference of $925,000 includes the corrections shown by Exhibit 292 as well as those made herein.

Other Errors

There are other corrections that should be made to Exhibit 64, other than those already discussed in this report. Among these other corrections that should be made are some that depend on information not available from Exhibit 64, Exhibit 292, the worksheets supplied by Commission Counsel in connection with Exhibit 249, or the testimony relating to any of these exhibits. The net result of all the following suggestions is probably not more than $100,000 further reduction in the excess of revenue from Baltimore over costs allocated to Baltimore Company.

The following is not intended to be a complete list of all the corrections that should be made in Exhibit 64.

Table I

Lines 7, 8, 9, 10 (also Manor Substation part of "Balance of

Transmission") - Allocate all 220 kv. facilities 100% to Baltimore.

Lines 11 and 13 - The Perryville line is used for service to the P.R.R.; but when it becomes necessary to make an allocation of its cost to Baltimore Company, then its use for interchange should be considered a use by Baltimore Company and about 95% of the total cost allocated to that Company.

Line 15 - Part of the cost shown in column 6 should be allocated to Baltimore Company on basis of interchange use being a use by Baltimore Company.

Line 22 - Allocate Lehman Farm Substation, included in "Balance of Transmission," to P.P.& L.Co..

Line 22 - The entire amount of disallowance in cost of Transmission Plant as shown in Commission Exhibit 51 has been applied against "Balance of Transmission." In Exhibit 51 not all of these disallowances are applied to the several items of property grouped in Line 22.

Lines 24 and 25 - Intangible and general plant should be distributed among the pool and the special facilities for the several customers in proportion to the sums of lines 3 and 23. This principle of allocation of intangible and general plant was stated by Mr. Davis (T-11781) "In practically every case that I have ever seen, intangible and general plant is spread over the classified items on the ratio of the totals of each classified group."

Table II

The changes to be made in Table I require corresponding changes in all seven lines of Table II.

Table III

The changes in allocation of investment in Table I require cor-

responding changes in lines 8, 9, 11, 14 and 15.

Line 17 - The Administrative and General Expense should be allocated to all customers as well as to the pool, just as in Table V-c it was allocated among Hydro, Steam, and Transmission facilities. The amount of Administrative and General Expense here used is incorrect and does not contain all expenses shown by the Company's reports. The improper deduction of $9,703 from this expense is shown in Table III-a.

Table IV

Line 1 - Show the corrected totals from Table III.

Line 2 - The amount shown is not the actual payment by Penn Water to Safe Harbor in 1944.

Line 3 - The tax allocation (details of which were shown at T-11795) is incorrect. With the data available it is possible and proper to allocate certain taxes between property in Pennsylvania and Maryland.

Table V

The additional corrections to this table are those that result from changes in Tables I, II, III and IV.

Table V-A

Line 1 - Change steam capacity from 26,000 kw. to 28,000 kw.

Lines 16 to 24 - Increase reserve to 15%, but only when dependable capacity is correctly shown as reported in Schedule 16 of FPC Form 12 of Penn Water and Safe Harbor. For the dependable capacity shown in Exhibit 64, no reserve is required.

Line 23 - Show correct P.R.R. load at time of system peak rather than billing demand.

Table V-B

Include daily net backfeed from Baltimore Company and purchased

Pennsylvania interchange among energy resources of Penn Water. Change cost of backfeed energy from Baltimore Company (wherever it may appear in Table VI or revisions of Tables IV and V) to a cost computed on a daily net basis.

Adjust amount of backfeed downward to represent average flow conditions.

Table V-d

Include proper amount of reserve with customers maximum demands; but only when dependable capacity is correctly stated on basis of Penn Water-Safe Harbor Form 12, Schedule 16. Include swing carrying capacity, but only where it is larger than proper reserve.

Use maximum demand of P.R.R. rather than billing demand. Use one hour Coatesville peak.

Safe Harbor Water Power Corporation

ORDER ALLOWING SUPPLEMENTAL RATE SCHEDULE TO TAKE EFFECT PRIOR TO DATE OF FILING

It appearing to the Commission that:

(a) On April 12, 1939, the Safe Harbor Water Power Corporation filed with the Federal Power Commission its supplemental agreement, dated December 13, 1938, to its agreement of August 1, 1933, the said agreement of August 1, 1933, being designated in the files of the Commission as Safe Harbor Water Power Corporation Rate Schedule FPC No. 4, with the Pennsylvania Water & Power Company and the Philadelphia Electric Company, said supplemental agreement providing, among other things, for an extension for a period of three years from March 31, 1939, of the term of the said Safe Harbor Water Power Corporation Rate Schedule FPC No. 4 whereby said Safe Harbor Water Power Corporation and Pennsylvania Water & Power Company sell electric power and energy to said Philadelphia Electric Company, also making certain changes in the provisions relating to emergency and interchange service and the territory to be served by Philadelphia Electric Company with energy so purchased, as set forth in said supplemental agreement;

(b) By the terms of said supplemental agreement it is to take effect as of April 1, 1939;

(c) Good cause has been shown for, and the public interest will be served by, allowing the supplemental agreement of December 13, 1938, to Safe Harbor Water Power Corporation Rate Schedule FPC No. 4 to take effect as of April 1, 1939;

The Commission orders that:

(A) The rate schedule contained in said supplemental agreement of December 13, 1938, to Safe Harbor Water Power Corporation Rate Schedule FPC No. 4, between the Safe Harbor Water Power Corporation, Pennsylvania Water & Power Company and Philadelphia Electric Company, as filed with the Commission on April 12, 1939, be and it is hereby allowed to take effect as of April 1, 1939;

(B) Said rate schedule contained in said supplemental agreement shall be deemed to have been filed and published in compliance with the Federal Power Act.

By the Commission.

September 22, 1939

In the Matter of)
) Project No. 1025
Safe Harbor Water Power Corporation)

ORDER AUTHORIZING INSTALLATION OF ADDITIONAL GENERATING UNIT

Upon application filed September 22, 1939, by Safe Harbor Water Power Corporation, licensee for Project No. 1025, Pennsylvania, for approval by the Commission of the installation of an additional generating unit in the Safe Harbor project on the Susquehanna River, and it appearing to the Commission that:

(a) There are at present six generating units installed in the project with a rated capacity of 42,500 horsepower or 28,000 kilowatts each and penstock and foundation openings have been provided for the installation of the proposed additional unit;

(b) The additional generating unit proposed will occupy plant position No. 1 and provide 25 cycle single phase energy to supply the Pennsylvania Railroad which purchases electric energy from the licensee for the operation of its trains;

Upon consideration of the application and record of the project, the Commission finds that:

Installation of the additional generating unit proposed is desirable in the public interest to supply the future needs of the market served by the licensee;

It is ordered that:

Approval is hereby given for the installation of said additional generating unit; provided, the licensee file within fifteen days of the date of receipt of this order, in accordance with the Rules of Practice and Regulations of the Commission, a supplemental Exhibit M showing the location and design of the unit as proposed.

By the Commission.

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY
OF BALTIMORE

Baltimore-3, Md.
April
Twenty-eighth
1 9 4 7

Mr. J. A. Walls, President
Pennsylvania Water and Power Company
Lexington Building
Baltimore 3, Maryland

Dear Mr. Walls:

Mr. Spaulding gave to us today the attached draft of a letter to Mr. Harry Ferguson, Operating Manager of the Pennsylvania Power and Light Company, proposing terms for the "Extension and Modification of Lancaster Power Supply Contract." Mr. Greer has advised Mr. Spaulding that the terms of this letter are unacceptable to this Company.

In my letter to you of January 24, 1947 the following statement was made with respect to this power contract:

> "This Agreement will terminate on October 31, 1948, and the eighteen months' notice to that effect should be given the Pennsylvania Power and Light Company by your Company, as provided in the Agreement. In our letter of April 26, 1945 to your Company regarding the then proposed renewal of the Lancaster power supply contract, we said:
>
> > 'It is our belief that the rates now charged to Pennsylvania Power and Light Company are too low and that it would be reasonable to increase the rates, particularly because the contract does not contain a fuel rate adjustment clause.
>
> We still hold to this belief. However, in view of the fact that your Company's rates are now being investigated by the regulatory authorities and the uncertainty and difficulty of carrying on contract negotiations under these conditions, we would be willing to approve a renewal Agreement for one year from October 31, 1948, provided such renewal Agreement shall contain a limitation on the load supplied by Holtwood Company."

The time for giving the notice to the Pennsylvania Power and Light Company expires on April 30, 1947 and we must insist that this notice be given by your com

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE

Sheet No. 2 To Mr. J.A. Wails, President Date April 28, 1947

pany and the Safe Harbor Water Power Corporation.

The suggested extension of the agreement for a period of one year with a limitation on the load supplied by your company should afford ample time in which to negotiate a new agreement for the Lancaster load.

If the year extension is not made and your company should fail to give the 18 months' notice to the Pennsylvania Power and Light Company, as Mr. Spaulding indicated might be the case, we shall be under the necessity of holding your company liable for all damages which this Company sustains in consequence thereof.

Yours very truly,

(Sgd.) Wm. Schmidt, Jr.
President

Mr. G. W. Spaulding
Member of Operating Committee
Pennsylvania Water & Power Co.
Lexington Building
Baltimore-3, Maryland

Dear Mr. Spaulding:

Referring to our telephone conversation regarding the operation under your Pennsylvania Power and Light Co, contract, I discussed this matter with Mr. Brunner and he advised me in a recent letter, copy of which was sent to you, that Lancaster is operating under Option "A" on a 100% basis, which, as he reports, does not make available the maximum income that could be derived from the P.P.&L. agreement.

During our telephone conversation you advised that although you realized that present operation on the 100% basis would not obtain the maximum dollar advantage to us, nevertheless you intend to continue to operate on a 100% basis unless an emergency develops.

I herewith advise that this position is not satisfactory to our Company and that we are therefore requesting that steps be taken as promptly as possible to obtain the full advantage of the P.P.&L. contract, or, in other words, supply only 80% of the Lancaster load as firm energy whenever it is economical to so operate.

Your cooperation in this matter will be appreciated.

Very truly yours,

(Sgd.) R. T. Greer

February 28, 1947.

Mr. J. A. Walls, President,
Pennsylvania Water & Power Company,
Lexington Building,
Baltimore - 3, Maryland.

Dear Mr. Walls:

Mr. Greer has shown to me the copy of the letter from Mr. Rankin, Chief Engineer of the Metropolitan Edison Company to Mr. Von Eiff, of your Company, dated February 21, 1947, and Mr. Von Eiff's reply of February 25, 1947, in which he states that your Company will increase the firm power to be supplied to the Metropolitan Edison Company from 23 mw. to 24 mw. effective March 1, 1947.

I desire to repeat what I said in my letter to you of February 18, 1947, regarding this matter, namely, that such increase would have a definite effect on this Company's "steam line" and we therefore are unwilling to approve this proposed increase. Nothing contained in your letter to me of February 20th changes our views in this respect.

Yours very truly,

(Sgd.) Wm. Schmidt, Jr.

February 20, 1947

Mr. Wm. Schmidt, Jr., President
Consolidated Gas Electric Light and Power Company
Lexington Building
Baltimore-3, Maryland

Dear Mr. Schmidt:

This will acknowledge your letter of February 18th in which you advise that it would not be proper for the Company to assume any additional firm power obligations to the Metropolitan Edison Company under its power contract of November 15, 1945, in connection with our available option to increase such amount of firm power from 23 Mw. to 24 Mw.

The exercise by us of the option to increase this supply to Metropolitan Edison Company on January 14, July 11, and September 14, 1946, was made only after our Operating Committee had very properly considered the matter, but no formal request for approval by your Company appeared necessary in that connection.

In addition to the reasons given by our Mr. Spaulding in his letter of February 11th, in supporting our intentions for further increasing this supply to Metropolitan Edison by 1,000 Kw., we had recognized that the operating reserves of the companies in Area 6 may be found inadequate should we experience a coincidence of minimum river flow with maximum system requirements and the outage of steam capacity. However, the coordinated scheduling of maintenance and operations of the systems in F.P.C. Area 6 and those in F.P.C. Area 5 minimize such probability. Further, the effect on the system "steam line" from such further increase in Metropolitan Edison's supply would appear to be of the order of 250 Kw. which if true, I believe you will agree with me, is negligible on the combined interconnected systems, especially if it be your current intention to remove from your Westport plant a steam generating unit with an effective rating of 5,000 Kw., but which could readily be increased to 10,000 Kw.

We are not convinced that your concern for adequate system reserves has been based upon sufficient appraisal of the situation

Mr. Wm. Schmidt, Jr., President
February 20, 1947

to warrant us in not exercising this Company's option under the M.E. contract to increase the amount of firm power in the light of the advantages and benefits both to this Company and to yours and, incidentally, to M.E.

Yours very truly,

(Sgd.) J.A. Walls

Baltimore-3, Md.

February 18, 1947.

Mr. J. A. Walls, President
Pennsylvania Water & Power Company,
Lexington Building,
Baltimore - 3, Maryland.

Dear Mr. Walls:

Mr. Creer has brought to my attention Mr. Spaulding's letter to him of February 11, regarding a proposed increase in the amount of firm power supplied the Metropolitan Edison Company under the contract of November 15, 1945.

We approved increases in the supply to that Company from 20 to 21 mw on January 14, 1946; from 21 to 22 mw on July 11, 1946; and from 22 to 23 mw on September 14, 1946, pursuant to Article IV of the 1931 Supplemental Agreement between our companies. While we appreciate the reasons Mr. Spaulding assigns in support of his opinion that a further increase of 1,000 kw should be made, we desire to point out that this Company is now short in capacity and the proposed increase would have a definite effect on this Company's "steam line." In times of minimum river flow and system peak load requirements it would be impossible to supply this additional 1,000 kw to Metropolitan Edison Company with adequate reserve and, therefore, it would not be proper to assume this obligation.

In my letter to you of January 24, 1947, regarding the Lancaster and Coatesville power contracts, the statement was made that a limitation should be placed on the load supplied Pennsylvania Power and Light Company and Philadelphia Electric Company. Such a limitation should also be placed on the Metropolitan Edison Company's load and we, therefore, find it necessary to disapprove the proposed increase of 1,000 kw.

Your cooperation in handling this matter with the Metropolitan Edison Company will be appreciated.

Yours very truly,

(Sgd.) Wm. Schmidt, Jr.

Re: Requested Waiver of 18 Months' Notice Period on Change of Option under the Pennsylvania Power and Light Company Contract.

Dear Mr. Spaulding:

Paragraph (9), entitled "Flexibility Provisions," of the Letter-Agreement dated April 28, 1939 between your Company and the Pennsylvania Power and Light Company gives the Pennsylvania Power and Light Company certain options with respect to the power supply. By letters dated February 8, 1944, February 23, 1945 and February 19, 1946 it was agreed that Pennsylvania Power and Light Company would change from Option "C" to Option "A" on February 15, 1947. On Tuesday, February 11, 1947 you advised me by telephone that Pennsylvania Power and Light Company desired to postpone the effective date of this change to February 15, 1948.

This is to confirm my conversation with you in which I advised that Baltimore Company could not agree to such postponement and must insist upon the contractual requirement of at least 18 months' written notice to change from Option "A" to Option "C". You will recall that Mr. Schmidt, in a letter of January 24, 1947 to Mr. Walls, made the statement that a limitation should be placed on the load supplied to Pennsylvania Power and Light Company and Philadelphia Electric Company. My position in this matter is in furtherance of this policy stated by Mr. Schmidt.

Very truly yours,

(Sgd.) R. T. Greer

PENNSYLVANIA WATER & POWER COMPANY

LEXINGTON BUILDING

BALTIMORE 3, MD.

February 11, 1947

Mr. R. T. Greer, Member of Operating Committee,
Consolidated Gas Electric Light and Power Company.
Baltimore-3, Maryland

Dear Mr. Greer:

Confirming my advice to you a few days ago, the "total requirements" of Metropolitan Edison Company, on February 4, 1947, were 317 Mw. Under the provisions of Article IV, Section 1(b)2 of Penn Water's power supply contract with that Company dated November 15, 1945, Penn Water has the election to increase the "amount of firm power" to be supplied thereunder from 23 Mw. to 24 Mw.

It is Penn Water's considered opinion that it should elect to increase the "amount of firm power" in accordance with the terms of the contract for the following reasons:

(a) Such increase will provide a greater utilization of the hydro resources of Penn Water and Safe Harbor;

(b) Such an increase in the firm power obligation of Penn Water will have a negligible effect on Baltimore Company's "steam line";

(c) There will be a material advantage to Baltimore Company by the exercise of such option by Penn Water; and

(d) Penn Water believes that is is in accord with the intent of Article VIII of the Supplemental Agreement between our two companies to exercise this option.

It is the intention of Penn Water to exercise its option to increase the "amount of firm power" to be supplied under its Metropolitan Edison Contract to 24 Mw. and wishes to advise Baltimore Company in advance of such action.

Yours very truly,

(Sgd.) G. W. Spaulding

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY
OF BALTIMORE

Baltimore-3, Md.
January
Twenty-fourth
1947

Mr. J. A. Walls, President,
Pennsylvania Water & Power Company,
Lexington Building,
Baltimore-3, Maryland.

Dear Mr. Walls:

Referring to our correspondence regarding the Lancaster Power Supply Agreement with the Pennsylvania Power and Light Company and the Coatesville Power Supply Agreement with the Philadelphia Electric Company, our views are as follows:

1. Lancaster Power Agreement

This Agreement will terminate on October 31, 1948, and the eighteen months' notice to that effect should be given the Pennsylvania Power and Light Company by your Company, as provided in the Agreement. In our letter of April 26, 1945 to your Company regarding the then proposed renewal of the Lancaster power supply contract, we said:

> "It is our belief that the rates now charged to Pennsylvania Power and Light Company are too low and that it would be reasonable to increase the rates, particularly because the contract does not contain a fuel rate adjustment clause."

We still hold to this belief. However, in view of the fact that your Company's rates are now being investigated by the regulatory authorities and the uncertainty and difficulty of carrying on contract negotiations under these conditions, we would be willing to approve a renewal Agreement for one year from October 31, 1948, provided such renewal Agreement shall contain a limitation on the load supplied by Holtwood Company. We will also approve the construction of the Manor Substation.

Mr. J. A. Walls January 24, 1947

2. Coatesville Power Agreement

This Agreement will terminate on March 31, 1948, pursuant to the notice contained in the letter of Mr. N. E. Funk, Vice President of the Philadelphia Electric Company, dated September 26, 1946.

Although we feel that the present rates are now too low, we are willing to approve a renewal Agreement for one year from March 31, 1948, with the following modifications:

(a) That the load supplied from the Downington Substation be transferred to the main supply of the Philadelphia Electric Company and the load area supplied from the Newlinville Substation be enlarged to include the load to the south of the present Coatesville area, as proposed by the Philadelphia Electric Company.

(b) That a limitation be placed on the load to be supplied by Holtwood Company under this renewal Agreement.

Yours very truly,

(Sgd.) Wm. Schmidt, Jr.

President

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY
OF BALTIMORE

Baltimore -3, Md. November 29, 1946

Mr. J. A. Walls, President,
Pennsylvania Water & Power Company,
Lexington Building,
Baltimore-3, Maryland.

Dear Mr. Walls:

Receipt is acknowledged of your letter of November 26th regarding the Manor Substation.

In view of the fact that it will be necessary before long to give consideration to your Company's power supply to the Pennsylvania Power and Light Company, inasmuch as the power contract with that Company will expire on October 31, 1948, we think it is desirable that the Operating Committee make an engineering study of the need for this installation and that pending the completion of such study no commitments be made as to the construction of the substation and related transmission line.

We believe that the operation of the present system and equipment has been satisfactory and there is therefore no need for any immediate steps toward providing for this installation, especially as with presently quoted deliveries of equipment and materials the substation could not be completed before the expiration of the power contract.

Yours very truly,

(Sgd.) Wm. Schmidt, Jr.

Re: Installation of 66 Kv. Manor Substation at Safe Harbor, Pennsylvania

Dear Mr. Schmidt:

A Letter Agreement of April 28, 1939, between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation and Pennsylvania Power & Light Company, provided that Generating Companies would construct, operate and maintain an enlarged 66 Kv. switching station at Safe Harbor together with an additional double circuit steel tower transmission line from Manor Substation to Lehman Farm Switching Station, not later than May 1, 1943. By letter agreement the construction of this substation was subsequently deferred, subject to the changing requirements or needs of either party. During the war years, certain temporary changes and additions were made to accommodate the increased load requirements of Pennsylvania Power & Light Company in its Lancaster area. With the continuing growth of this customer's load, Pennsylvania Power & Light Company has recently brought to our attention its need for Manor Substation, and it is our judgment that reliability of service to this customer warrants its early completion.

With the changes and enlargement of the existing 66 Kv switching facilities at Manor Substation at Safe Harbor, there will also be provided the contemplated construction of a double circuit steel tower transmission line from Manor Substation to Lehman Farm, and certain necessary and related changes at Lehman Farm and Holtwood. In connection with this Manor Substation, Safe Harbor will provide certain additional control equipment connecting the substation with its control room.

The cost for completing the above facilities, other than the necessary investment by Safe Harbor Company, has been estimated to be $550,000. There will be a net charge to retirement reserve of $20,000 and a net increase in fixed capital of $530,000.

The facilities to be provided by Safe Harbor Company are estimated to cost about $37,000 in connection with which there will be a net charge to retirement reserve of that company of about $3,000 and a net increase in fixed capital of $34,000.

Mr. Wm. Schmidt, Jr.
November 26, 19[illegible]

The present estimates of Power and of Safe Harbor Company are necessarily subject to modification in the light of unsettled quotations on equipment and uncertain labor costs for construction.

Generating Companies' commitment for this investment was recognized at the time your Company approved the execution of this Letter Agreement of April 28, 1939, being specifically referred to in an Operating Committee memorandum dated June 1, 1939 relating thereto. While the approval of your Company at this time, of the investment necessary for these extensions, may not be required under the provisions of Article V of the Supplemental Agreement dated June 1, 1931, we wish to advise you at this time of our intentions to proceed, particularly in the light of the increased costs of construction.

We are hoping to place orders for the more critical equipment before the end of this year.

Yours very truly,

(Sgd.) J. A. Walls
President

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY
OF BALTIMORE

Baltimore-3, Md.

November 1, 1946

Mr. John A. Walls, President,
Pennsylvania Water & Power Company,
Lexington Building,
Baltimore-3, Maryland.

Dear Mr. Walls:

On October 8, 1946 Mr. G. W. Spaulding, Vice-President of your Company, at our request furnished us with a copy of the letter of Mr. N. E. Funk, Vice-President of the Philadelphia Electric Company, dated September 26, 1946, addressed to Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation, giving notice of a desire to terminate on March 31, 1948 the Coatesville power supply agreement dated August 1, 1933 and the supplements thereto, unless certain changes and modifications, necessitated by conditions in the area supplied, can be made in the agreement.

In Mr. Spaulding's reply letter, dated September 30, 1946, he states:

> "We will be pleased to discuss the changes and modifications to these agreements which you may have in mind at an early date. I believe I may be in Philadelphia within the next two weeks and will try to arrange a talk with you and Mr. Irwin on that occasion if it is convenient."

In order that there may be no misunderstanding as to our position in this matter, we desire to confirm the request transmitted orally to Mr. Spaulding by Mr. Greer, our member of the Operating Committee, on October 11, viz., that representatives of your Company have no further discussion with representatives of the Philadelphia Electric Company regarding any changes to, or extension or renewal of, the existing contract, which will terminate on March 31, 1948, or the making of a new contract, before receiving further advice from Consolidated Company.

Yours very truly,

(Sgd.) Wm. Schmidt, Jr.

President.

Mr. R. T. Greer,
Member - Operating Committee,
Consolidated Gas Electric Light and Power Company
Baltimore-3, Maryland

Dear Mr. Greer:

Please find enclosed the data prepared by this Company for Schedules 2 and 16 of F.P.C. Form 12 for the year 1945. The attached schedules and accompanying notes are being filed by Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation in their power system report to the Federal Power Commission, and the same data are applicable to the combined system report for Penn Water, Safe Harbor, Baltimore, Washington and Bethlehem Steel companies, being compiled by your Company from data submitted by the several operating companies.

Yours very truly,

(s) G. W. Spaulding

June 3, 1946

Mr. G. W. Spaulding
Member, Operating Committee
Pennsylvania Water & Power Co.
Lexington Building
Baltimore-1, Maryland

Dear Mr. Spaulding:

Attached are copies of Schedules 2 and 16 of F.P.C. Form 12 which we have prepared for the pool report for the year 1945.

You will note that we are following the same method of stating hydro capacity as was used in the pool report for the several previous years. We have, however, included notes (last paragraph in notes to Schedule 2 and note 1-b to Schedule 16) which indicate that your Company desires to state the dependable hydro capacities on a different basis and that your Company in its report is submitting different figures.

Very truly yours,

(s) R. T. Greer

Mr. R. T. Greer,
Member - Operating Committee,
Consolidated Gas Electric Light and Power Company
Baltimore-3, Maryland

Dear Mr. Greer:

This will acknowledge your note of June 3, 1946, enclosing the data and notes which your company has prepared for inclusion in F.P.C. Form No. 12 for the year 1945, applicable to the combined system report for Penn Water, Safe Harbor, Baltimore, Washington and Bethlehem Steel companies.

We wish to refer you to our letter of May 28, 1946 and the statements attached thereto, as we believe such statements are the only correct data for submission to the Federal Power Commission as respects the capacities of this Company and of Safe Harbor Company in connection with F.P.C. Form No. 12, Annual Report.

Yours very truly,

(s) G. W. Spaulding

* Net hourly deliveries at Highlandtown, Westport, Riverside and Takoma.

** A 31,000 kw. unit at Safe Harbor was out for maintenance.

Costs of
Penn Water's and Safe Harbor's
Firm Power Services
Rendered to Baltimore Company

1946 - Actual and Adjusted

General Statement

This cost of service study consists of 13 schedules, each schedule consisting generally of two parts. The first parts provide certain data in tabular form and the second parts consist of notes regarding the sources of the data and the methods of computation.

Schedules 1 and 2 provide basic data with respect to investments of Penn Water and Safe Harbor, shown separately for general production plant and for the special facilities provided for the various customers. These data are derived from the cost records of the companies, supplemented by the estimated costs of major authorized additions now in progress.

Schedules 3, 4 and 5 provide the basis for the determination of the capacity and energy service components of Penn Water's and Safe Harbor's combined firm power services to Baltimore Company. These data were derived from the operating records of the companies.

Schedules 6 through 13 show the computations of Penn Water's and Safe Harbor's costs for firm power services to Baltimore Company. These computations are based on the preceding schedules and on additional data obtained from the accounting records of the companies. In addition to the actual costs shown for 1946, a determination has been made of costs typical of conditions in the immediate future. These typical costs are based on actual 1946 costs adjusted for increases in plant investment, increases in operating expenses as estimated for the current year, and the elimination of the tax credit arising from the refunding of Safe Harbor's bonds.

The following summary of results is produced by a combination of costs and returns determined for firm power services rendered to Baltimore Company and shown in Schedules 9a, 10a, and 13a.

Costs of
Penn Water's and Safe Harbor's
Firm Power Services
Rendered to Baltimore Company

1946 - Actual and Adjusted

Summary of Results

Total Costs Incurred in Rendering Firm Power Services to Baltimore Company

	Services Rendered Directly to Baltimore Co. (Sch. 9a and 10a)	Services Rendered to PRR in Maryland (Sch. 13 a)	Total
Actual			
Penn Water			
Costs (excl. return)	$ 2,307,000	$ 87,000	$ 2,394,000
Return	1,146,000	66,000	1,212,000
Total	$ 3,453,000	$ 153,000	$ 3,606,000
Safe Harbor			
Costs (excl. return)	$ 473,000	$ 35,000	$ 508,000
Return	950,000	60,000	1,010,000
Total	$ 1,423,000	$ 95,000	$ 1,518,000
Combined Penn Water and Safe Harbor - 1946 Actual	$4,876,000	$ 248,000	$ 5,124,000
Adjusted			
Penn Water			
Costs (excl. return)	$ 2,406,000	$ 90,000	$ 2,496,000
Return	1,161,000	67,000	1,228,000
Total	$ 3,567,000	$ 157,000	$ 3,724,000
Safe Harbor			
Costs (excl. return)	$ 867,000	$ 62,000	$ 929,000
Return	950,000	60,000	1,010,000
Total	$ 1,817,000	$ 122,000	$ 1,939,000
Combined Penn Water and Safe Harbor, 1946 Adjusted	$ 5,384,000	$ 279,000	$ 5,663,000

Schedule 1a

Cost of Service Study

1946-Actual and Adjusted

Statement of Penn Water's Investments in General Production Plant and in Special Facilities, and Statement of Depreciation Reserve

	as of Jan. 1, 1946			as of Dec. 31, 1946		
	in Pa.	in Md.	Total	in Pa.	in Md.	Total
	(units of $1,000)			(units of $1,000)		
1. General Production Plant	25,940.6	21.3	25,961.9	26,094.0	21.5	26,115.5
2. Special Facilities for Baltimore Co.	1,345.4	5,243.7	6,589.1	1,353.3	5,249.9	6,603.2
3. Special Facilities for P.R.R.	1,842.9	504.3	2,347.2	1,850.0	504.8	2,354.8
4. Special Facilities for Others	1,447.7	-	1,447.7	1,462.4	-	1,462.4
5. Total Electric Plant (1+2+3+4)	30,576.6	5,769.3	36,345.9	30,759.7	5,776.2	36,535.9
6. Excess of Book Cost over Revised Original Cost						2,218.1
7. Plant, Property and Power Development (per books) (5+6)						38,754.0
8. Depreciation Reserve (per books)						9,453.9
9. Depreciation Reserve (per D. Gunn)			6,000.0			6,357.3

Schedule 1a

Schedule 1b

Cost of Service Study

1946 - Actual and Adjusted

Notes to Schedule 1a

All data on Schedule 1a have been obtained from revised original cost data.

For the purpose of this study the investment as of January 1, 1946 has been adjusted to eliminate the cost of Violet Hill Substation, sold in March 1946.

1. General Production Plant includes hydro station, steam station, coal production and preparation plants, service buildings, 25 and 60 cycle step-up substations, tie between circuits 13 and 14 and circuits 15 and 16, Holtwood-Safe Harbor transmission lines, load dispatching facilities, and village.

2. Special Facilities for Baltimore include Holtwood-Baltimore, Safe Harbor-Baltimore, Gunpowder-Baltimore, and Ellicott-Washington transmission lines and Highlandtown, Ellicott and Manor Substations.

3. Special Facilities for P.R.R. include Conestoga Substation and Safe Harbor-Perryville transmission lines.

4. Special Facilities for Others include Holtwood-York, Holtwood-Coatesville, and Holtwood-Lancaster (part of circuits 3 and 18 owned by Penn Water) transmission lines, facilities for Pioneer service, Lehman Farm and Donegal Tap switching stations and Violet Hill Substation.

5. Depreciation Reserve of $6,000,000 as of January 1, 1946 (after adjustment resulting from sale of Violet Hill) is in accordance with testimony of D. Gunn (T-288). The balance in the reserve as of December 31, 1946 is computed as follows:

Depreciation Reserve, Jan. 1, 1946	$6,000,000
Add: Depreciation Expense (T-288)	400,000
Deduct: Charges to Reserve (excl. Violet Hill)	-42,686
Balance - Dec. 31, 1946	$6,357,314

To reflect expected conditions in the immediate future, the plant investment as of Dec. 31, 1946 has been adjusted by the addition thereto of the estimated cost of major authorized additions now in progress. The estimated costs of these additions and the total adjusted plant investments are as follows:

Schedule 1b (Continued)

	Estimated Cost of Major Additions $1,000	Adjusted Plant $1,000
1. General Production Plant	380	26,495.5
2. Special Facilities for Baltimore Co.	30	6,633.2
3. " " " P.R.R.	0	2,354.8
4. " " " Others	340	1,802.4
5. Total Electric Plant	750	37,285.9

The largest addition included above is the 66 kv. Manor Substation; one third of the cost of this substation has been allocated to General Production Plant and two thirds to Special Facilities for Others.

Schedule 2a

Cost of Service Study

1946-Actual and Adjusted

Statement of Safe Harbor's Investments in Genera. Production Plant and in Special Facilities, and Statement of Depreciation Reserve

	as of Jan. 1, 1946 (units of $1,000)	as of Dec. 31, 1946 (units of $1,000)
1. General Production Plant	28,254.4	28,306.2
2. Special Facilities for P.R.R.	1,934.3	1,934.3
3. Total Electric Plant	30,188.7	30,240.5
4. Depreciation Reserve	2,142.0	2,399.0

Note: All Safe Harbor property located within the project boundaries in the Commonwealth of Pennsylvania.

Schedule 2b

Cost of Service Study

1946 - Actual and Adjusted

Notes to Schedule 2a

All data in Schedule 2a are from S.H. original cost records.

1. General Production Plant includes hydro station (excluding certain items listed below as special facilities), step-up transformer facilities, and village.

2. Special Facilities for P.R.R. includes tunnel to Conestoga Substation, control facilities for Conestoga Substation (located in S.H. powerhouse) frequency changer including site improvement, excess costs of 25 cycle generators over cost of 60 cycle generators including structures.

To reflect expected conditions in the immediate future, the plant investment as of December 31, 1946 has been adjusted by the addition thereto of the estimated cost of major authorized additions now in progress. The estimated costs of these additions and the total adjusted plant investments are as follows:

	Estimated Cost of Major Additions (units of $1,000)	Adjusted Plant (units of $1,000)
1. General Production Plant	120	28,426.2
2. Special Facilities for PRR	0	1,934.3
3. Total Electric Plant	120	30,360.5

Schedule 3a

Cost of Service Study

1946 Actual

Summary of Interchange Purchases and Sales and of Backfeed Used in Connection with Firm Supply

	$1,000	million kwh.	mills per kwh.
Interchange (as accounted for in actual billing records)			
1. P.W.'s purchases from Pennsylvania Ties	54.5	12.8	4.27
2. P.W.'s purchases from Baltimore Co. (see Item 7)	(not accounted for in "net" billing)		
3. P.W. & S.H. Hydro & P.W. Steam Energy Sold as Interchange to Pennsylvania Customers	32.8	14.5	2.27
4. Backfeed and Diverted Energy Sold as Interchange to Pennsylvania Customers	1,149.4	~~189.9~~	6.05
5. Total Interchange Sales in Pennsylvania (3+4)	1,182.2	204.4	
Backfeed used in connection with firm supply in Pennsylvania (per accounting necessary to show services to Baltimore Co. on a firm power basis)			
6. Purchases from Pennsylvania Customers	16.9	4.0	4.27
7. Purchases from Baltimore Company	313.3	76.4	4.10
8. Total backfeed or interchange purchases used in connection with firm supply in Pennsylvania (6+7)	330.2	80.4	

Schedule 3a

Schedule 3b

Cost of Service Study

1946 - Actual

Notes to Schedule 3a

Line 1 to 5 - All dollar and energy amounts are from Company's interchange billing records.

Line 6 - Total interchange purchases from Pennsylvania Customers (Line 1) minus interchange sales to Baltimore Company as shown in Item (e) 11 of Firm Power Bill. Energy amounts from analysis of 1946 records. Rate (mills/kwh.) used is same as in line 1.

Line 7 - Dollar amounts are same as Item (d) 5a of Firm Power Bill. Energy amounts and rate (mills/kwh.) used are based on analysis of 1946 records.

Schedule 4a

Cost of Service Study

1946 Actual

Penn Water's and Safe Harbor's Energy Services to Baltimore Company

		million kwh.
1.	P.W. and S.H. hydro generation	1,506
2.	P.W. steam generation	181
3.	Total backfeed used in connection with firm supply in Pennsylvania	80
4.	Total Available energy (1+2+3)	1,767
5.	Deduct: Trans. losses and station uses	123
6.	Deduct: P.W. and S.H. hydro and P.W. steam energy sold as interchange	14
7.	Balance = Firm energy service (4-5-6)	1,630
8.	Deduct: Firm energy supplied to Pennsylvania Customers (incl. P.R.R. in Pa.)	749
9.	Balance = Firm energy service rendered to Baltimore Company (7-8)	881
10.	Ratio of firm energy service to Baltimore Company to total firm energy (9/7)	54.0%

Schedule 4b

Cost of Service Study

1946 - Actual

Notes to Schedule 4a

Line 1 - 1946 gross generation at Holtwood and Safe Harbor hydro stations.

Line 2 - 1946 gross generation at Holtwood Steam Station.

Line 3 - From Schedule 3a, line 8.

Line 5 - 1946 system transmission losses and Hd.-SH station uses.

Line 6 - From Schedule 3a, line 3.

Line 8 - 1946 supplies to firm customers of Penn Water and of Penn Water and Safe Harbor in Pennsylvania. All peak transfer energy is included with energy supplied to P.R.R. in Pennsylvania.

Line 9 - The amount shown includes energy service rendered to P.R.R. in Maryland.

Schedule

Cost of Service Study

1946 Actual

Penn Water's and Safe Harbor's Capacity Services to Baltimore Company

(All Capacities in Megawatts and on 1 Hour Integrated Basis)

1.	Hydro Capacity (P.W. + S.H.)		295
2.	Capacity of Holtwood Steam Plant		28
3.	Deduct: Station Uses & Transmission Losses		18
4.	Capacity Services at time of Combined System (Area 6 plus Pennsylvania Customers) Peak (1+2-3)		305
5.	Total of Pennsylvania Customers (incl. P.R.R. in Pa.) Loads at time of Combined System Peak	134	
6.	P.W. and S.H. Share of Combined System Reserve Requirement (Reserve Applicable to Assured Capacity Obligations in Pennsylvania)	20	
7.	Total Capacity Obligation to Pennsylvania Customers (incl. P.R.R. in Pa.) at time of Combined System Peak (5+6)		154
8.	Capacity Services Available to Baltimore Company at time of Combined System Peak (4-7)		151
9.	Total of Pennsylvania Customers' (incl. P.R.R. in Pa.) Non-coincident Peak Loads	155	
10.	P.W. and S.H. Share of Combined System Reserve Requirement (Reserve Applicable to Assured Capacity Obligations in Pennsylvania)	20	
11.	Total Capacity Services to Pennsylvania Customers (incl. P.R.R. in Pa.) (9+10)		175
12.	Total (8+11)		326
13.	Ratio of Capacity Services to Baltimore Company to Total (8/12)		46.3%

Schedule 5a

[24377] Exhibit No. 378 4203

Exhibit No. 378

Schedule 5b

Cost of Service Study

1946 - Actual

Notes to Schedule 5a

Line 1 - Determination of Holtwood and Safe Harbor hydro capacity service available and used in connection with the combined system loads (Area 6 plus Pennsylvania Customers).

Line 2 - Winter rating of the peak capacity available from Holtwood Steam Station.

Line 3 - Experienced losses with total P.W. and S.H. generation as shown in Lines 1 and 2.

Line 5 - From hourly load data for 1946.

Line 6 - The Pennsylvania Customers' loads (incl. P.R.R. in Pa. but excl. M.E. Co.) are included in the combined system load. System capacity must be planned to cover this combined load with an adequate margin of reserve. P.W. and S.H. are responsible for the provision from their own capacity of such part of the total system reserve capacity. The reserve capacity responsibility here assigned to P.W. and S.H., to be provided from their capacity, is 15% of the sum of the non-coincident peaks of the Pennsylvania Customers (incl. P.R.R. in Pa. but excl. M.E. Co.).

Line 7 - Sum of Pennsylvania Customers' loads at time of combined system peak and reserve provided for these loads.

Line 8 - Capacity services available to Baltimore Company at time of combined system peak (which coincides with Baltimore Company's peak).

Line 9 - From hourly load data for 1946.

Line 10 - See Line 6

Schedule 6a

Cost of Service Study

9.	Average of 7 and 8	6,178	6,357	2,270	2,399

* The amounts in "Adjusted" columns, line 3, are for 12-31-46 plus additions.

Schedule 6a

Schedule 7a

Cost of Service Study

1946 Actual and Adjusted

Allocation of Penn Water's Investment, Working Capital, Depreciation Reserve, Return and Income Taxes to Baltimore Company

	Actual factor	Actual $1,000	Adjusted factor	Adjusted $1,000
Investment in General Production Plant (from Schedule 1)				
1. At beginning of year		25,962		
2. At end of year		26,116		
3. Average of 1 and 2		26,039		26,496
Allocation to Baltimore Company of Line 3				
4. On basis of capacity service	.5x.463	6,028	.5x.463	6,134
5. On basis of energy service	.5x.540	7,031	.5x.540	7,154
Investment in Special Facilities for Baltimore Co. (from Schedule 1)				
6. At beginning of year		6,589		
7. At end of year		6,603		
8. Average of 6 and 7		6,596		6,633
9. Total Investment Allocated to Baltimore Company (4+5+8)		19,655		19,921
10. Ratio of Line 9 to Total Electric Plant from Schedule 6a	.539		.534	
Working Capital Allocated to Baltimore Company				
11. Materials and Supplies (on basis of investment)	.539	264	.534	261
12. Cash (on basis of operating expenses)	.557	272	.557	272
13. Undepreciated Rate Base Allocated to Baltimore Company (9+11+12)		20,191		20,454
14. Depreciation Reserve Allocated to Baltimore Company	.539	3,330	.534	3,395
15. Return on Allocated Rate Base (Rate x 13)	6.5%	1,312	6.5%	1,330
16. Credit on Allocated Depr. Reserve (Rate x 14)	3.0%	99	3.0%	102
17. Allocated Operating Income (15-16)		1,213		1,228
18. Allocated Federal Income Tax		432		440
19. Allocated Pennsylvania Income Tax		20		21
20. Total Income Taxes		452		461

Schedule 7b

Cost of Service Study

1946 - Actual and Adjusted

Notes to Schedule 7a

Lines 4 and 5 - The investment in general production plant, shown in line 3, is allocated one-half to capacity service and one-half to energy service. Of the one-half which is allocated to capacity service, the percentage shown in line 13 of Schedule 5a is allocated to Baltimore Company. Of the one-half which is allocated to energy service, the percentage shown in line 10 of Schedule 4a is allocated to Baltimore Company.

Line 10 - The total investment allocated to Baltimore Company shown in Line 9, has been divided by the total electric plant, shown in Line 3 of Schedule 6a. The ratio shown here is the portion of Penn Water's total investment in electric plant which is allocated to service to Baltimore Company.

Line 11 - The materials and supplies component of working capital, shown in Line 4 of Schedule 6a, has been allocated to Baltimore Company in proportion to investment.

Line 12 - The cash component of working capital, shown in Line 5 of Schedule 6a, has been allocated to Baltimore Company in proportion to operating expenses.

Line 14 - The depreciation reserve, shown in Line 9 of Schedule 6a, has been allocated to Baltimore Company in proportion to investment.

Line 15 - A return of 6-1/2% has been computed on the undepreciated rate base allocated to Baltimore Company.

Line 16 - A credit at 3% has been allowed on the allocated portion of the depreciation reserve.

Lines 18, 19 and 20 - Federal and State Income Taxes have been computed by the tentative tax method used in Penn Water's usual tax computation. In this computation income deductions have been allocated in proportion to total investment and working capital. The Pennsylvania State Income Tax has been allocated in the ratio of the investment in Pennsylvania, included in Line 9, to the total investment in Pennsylvania in Line 5 of Schedule 1a.

Schedule 8a

Cost of Service Study

1946 Actual and Adjusted

Allocation of Safe Harbor's Investment, Working Capital, Depreciation Reserve, Return and Income Taxes to Baltimore Company

		Actual factor	Actual $1,000	Adjusted factor	Adjusted $1,000
	Investment in General Production Plant (from Schedule 2)				
1.	At beginning of year		28,254		
2.	At end of year		28,306		
3.	Average of 1 and 2		28,280		28,426
	Allocation to Baltimore Company of line 3				
4.	On basis of capacity service	.5x.463	6,547	.5x.463	6,581
5.	On basis of energy service	.5x.540	7,636	.5x.540	7,675
6.	Total Investment Allocated to Baltimore Company (4+5)		14,183		14,256
7.	Ratio of line 6 to Total Electric Plant from Schedule 8a	.469		.469	
8.	Working Capital		103		103
9.	Depreciation Reserve Allocated to Baltimore Company (at beginning of year)	.469	1,005	.469	1,125
10.	Return on Allocated Rate Base (Rate x 6)	7.0%	993	7.0%	998
11.	Deduct: Interest Comp. of Depr. Exp. (Rate x 9)	4.25%	43	4.25%	48
12.	Allocated Operating Income (10-11)		950		950
13.	Allocated Federal Income Tax		0		320
14.	Allocated Pa. State Income Tax		0		18
15.	Total Income Taxes		0		338

Schedule 8b

Cost of Service Study

1946 - Actual and Adjusted

Notes to Schedule 8a

Lines 4 and 5 - The investment in general production plant, shown in Line 3, is allocated one-half to capacity service and one-half to energy service. Of the one-half which is allocated to capacity service, the percentage shown in Line 13 of Schedule 5a is allocated to Baltimore Company. Of the one-half which is allocated to energy service, the percentage shown in Line 10 of Schedule 4a is allocated to Baltimore Company.

Line 7 - The total investment allocated to Baltimore Company, shown in Line 6, has been divided by the total electric plant, shown in Line 3 of Schedule 6a. The ratio shown here is the portion of Safe Harbor's total investment in electric plant which is allocated to service to Baltimore Company.

Line 9 - Depreciation reserve at the beginning of the year, shown in Line 5 of Schedule 6a, has been allocated to Baltimore Company in proportion to total investment.

Line 10 - Return has been computed at 7% on the investment allocated to Baltimore Company.

Line 11 - Interest component of depreciation expense has been computed at 4-1/4% on the allocated portion of the depreciation reserve.

Lines 13, 14 and 15 - Federal and State Income Taxes have been computed by the tentative tax method used in Safe Harbor's usual tax computation. In this computation income deductions have been allocated in proportion to investment. As a result of the refunding of Safe Harbor's bonds in 1946, the actual taxes accrued were zero. In the "Adjusted" column the taxes are based on income deductions applicable in the first year after the issuance of Safe Harbor's new bonds and notes.

Schedule 9a

Cost of Service Study

1946 Actual and Adjusted

Allocation of Penn Water's Expenses to Baltimore Company and Determination of Total Cost to Penn Water for Service to Baltimore Company

Expenses	Actual: Totals to be Allocated $1,000	Actual: Allocation to Baltimore Co. Ratio	Actual: Allocation to Baltimore Co. $1,000	Adjusted: Totals to be Allocated $1,000	Adjusted: Allocation to Baltimore Co. Ratio	Adjusted: Allocation to Baltimore Co. $1,000
1. Operation and Maintenance	1,495	.567	847	1,686	.567	956
2. Net Interchange	297	.540	160	297	.540	160
3. General Expenses	906	.544	493	878	.540	475
4. General Taxes (excl. of Pa. Income Tax)	251	.553	139	253	.553	140
5. Federal Income Tax	-	-	432	-	-	440
6. Pennsylvania Income Tax	-	-	20	-	-	21

9. Allocated Operating Income (from Schedule 7a)	-	-	1,213			1,228
10. Credit for Revenues other than from Firm Power Services (Miscellaneous Electric Revenues)	134	.501	(67)	134	.501	(67)
11. Total Expenses and Return Allocated to Baltimore			3,453			3,567

Schedule 9a

Schedule 9b

Cost of Service Study

1946 - Actual and Adjusted

Notes to Schedule 9a

Line 1 - The ratio of the total operation and maintenance expense which has been allocated to Baltimore Company is a composite figure. From the accounting records of the Company, an allocation of operation and maintenance expense was made among the general production plant, fuel cost for Holtwood Steam Station, and special facilities provided for Baltimore Company, P.R.R. and others. The expense allocated to general production plant was in turn allocated 50% to capacity and 50% to energy; these two portions were then allocated to Baltimore Company in proportion ~~to capacity~~ and energy services. Fuel cost for Holtwood Steam Station was allocated to Baltimore Company in proportion to energy service. Expense allocated to special facilities for Baltimore Company was directly included in the allocated total. Part of the load dispatching expense accumulated on the books of Penn Water is charged to Safe Harbor; another credit arises from village revenue. Both credits were considered as applying to general production plant and were allocated through capacity and energy services.

Line 2 - Net interchange is the excess of the estimated cost of backfeed energy used in connection with firm supply over the sales as interchange of Penn Water and Safe Harbor excess hydro and Holtwood steam energy. The dollar amount can be derived, on this basis, as the difference between Line 8 and Line 3 of Schedule 3a.

The amount of net interchange expense can also be derived directly from Penn Water's firm power bill to Baltimore Company. The sum of Items (d) 1,2,3 and 5, all representing interchange purchases, minus the sum of Items (e) 5,6,7 and 11, all representing interchange sales, is equal to the dollar amount of net interchange.

Net interchange has been allocated to Baltimore Company in the ratios of energy service as shown on Schedule 4a.

Line 3 - General expense has been allocated to Baltimore Company on the basis of investment allocated to Baltimore Company (to the extent of about 75% of the expense) and on the basis of operating expense allocated to Baltimore Company (for the remaining 25% of the expense).

Line 4 - The general taxes here allocated are as shown in the Company records, after deducting therefrom the Pennsylvania income tax, which tax has been considered in relation to return.

General taxes were considered individually. Capital Stock and Property Taxes for Pennsylvania and Maryland were allocated to Baltimore Company in proportion to its allocated portion of investment in each state. Federal taxes other than income were allocated to Balti-

Schedule 9b
(Continued)

more Company by the ratio determined by the allocation of operation and maintenance expense before the credits mentioned in notes for Line 1 above. The Pennsylvania Gross Receipts Tax and Pennsylvania PUC assessment have not been considered allocable to Baltimore Company.

Lines 5 and 6 - Income taxes allocated to Baltimore Company have been copied from Schedule 7a. No total or allocation ratio has been shown since these taxes are unrelated to the total income taxes paid by Penn Water.

Line 7 - Depreciation expense allocated is that shown by the testimony of D. Gunn (T.288).

The allocation ratio is the ratio of investment allocated to service to Baltimore Company as found in Schedule 7a.

Line 10 -It is not possible to allocate against Miscellaneous Electric Revenue any investments or expenses. Consequently, an allocated portion of these revenues must be considered as a credit against the total expenses and return allocated to Baltimore Company.

These revenues have been considered as applying to general production plant and have been allocated to Baltimore Company through energy and capacity services.

The "Adjusted Totals to be Allocated" shown in lines 1, 3 and 4 are based on the Operating Committee's estimated Holtwood Company bill to Baltimore Company for 1947.

Schedule 10a

Cost of Service Study

1946 Actual and Adjusted

Allocation of Safe Harbor's Expenses to Baltimore Company and Determination of Total Cost to Safe Harbor for Service to Baltimore Company

	Actual			Adjusted		
	Totals to be Allocated	Allocation to Baltimore Co.		Totals to be Allocated	Allocation to Baltimore Co.	
Expenses	$1,000	Ratio	$1,000	$1,000	Ratio	$1,000
1. Operation and Maintenance	436	.461	201	513	.461	237
2. General Expenses	226	.465	105	262	.465	122
3. General Taxes (exc. Pa. Income Tax)	99	.425	42	94	.425	40
4. Federal Income Tax			0	-	-	320
5. Pennsylvania Income Tax			0			18
6. Depreciation (annuity plus interest)	266	.469	125	278	.469	130
7. Total Expenses			473			867
Return						
8. Allocated Operating Income (from Schedule 8a)			950			950
9. Total Expenses and Return Allocated to Baltimore Company			1,423			1,817

Schedule 10a

Schedule 10b

Cost of Service Study

1946 - Actual and Adjusted

Notes to Schedule 10a

Line 1 - The ratio of the total operation and maintenance which has been allocated to Baltimore Company is a composite figure. From the accounting records of the company allocation of operation and maintenance expense was made between the general production plant and special facilities provided for P.R.R. The expense allocated to general production plant was in turn allocated 50% to capacity and 50% to energy; these two portions were then allocated to Baltimore Company in proportion to capacity and energy services. Part of the load dispatching expense accumulated on the books of Penn Water is charged to Safe Harbor and the allocated portion of this expense was added in the total expense allocated to Baltimore Company. A credit arises from village revenue, which was considered applicable to general production plant and was allocated to Baltimore Company through capacity and energy services.

Line 2 - General expense has been allocated to Baltimore Company in part on the basis of investment allocated to Baltimore and in part on the basis of operating expense.

Line 3 - The general taxes here allocated are as shown in Company records after deducting therefrom the Pennsylvania income tax, which tax has been considered in relation to return.

The ratio allocated to Baltimore Company is a composite figure. Regulatory Commission charges were allocated to general production plant, and in turn allocated through capacity and energy service to Baltimore Company. Other general taxes are related to investment or to operation and maintenance expense and were allocated to Baltimore Company in the same ratios that investment or operation and maintenance respectively were allocated to Baltimore Company. The gross receipts tax was not considered allocable to Baltimore Company.

Lines 4 and 5 - Income taxes allocated to Baltimore Company have been copied from Schedule 8a.

Line 6 - Depreciation expense allocated is the sum of the annuity and interest components. The allocation ratio is the ratio of investment allocated to service to Baltimore Company as found in Schedule 8a.

Line 8 - Because the interest component of depreciation expense is included in Line 6, it has been deducted in the computation of allocated operating income.

The "Adjusted Totals to be Allocated" shown in lines 1, 2 and 3 are based on the Operating Committee's estimated Safe Harbor bill to Holtwood and Baltimore Companies for 1947. The adjusted amount in line 6 includes 4.25% interest on the depreciation reserve balance as of 12-31-46.

Schedule 11a

Cost of Service Study

1946 Actual and Adjusted

Allocation to P.R.R. of Penn Water's Investment, Working Capital, Return and Expenses for Special Facilities Provided for Service to P.R.R.

	Actual			Adjusted		
	Totals to be Allocated	Allocation to P.R.R.		Totals to be Allocated	Allocation to P.R.R.

13. General Expenses	906	.057	52	878	.055	48
14. General Taxes (excl. Pa. Income Tax)	251	.060	15	253	.060	15
15. Federal Income Tax			51	-		52
16. Pennsylvania Income Tax			3	-		3
17. Depreciation	400	.065	26	400	.063	25
18. Total Expenses			190			192
19. Total Return and Expenses Allocated to Special Facilities Provided for Service to P.R.R. (11+18)			334			336

Schedule 11b

Cost of Service Study

1946 - Actual and Adjusted

Notes to Schedule 11a

Line 4 - The total investment in special facilities provided for service to P.R.R., shown in Line 3, has been divided by the total electric plant, shown in Line 3 of Schedule 6a.

Lines 5 and 6 - Working Capital (from Ex.23) has been allocated to special facilities for service to P.R.R. in the manner explained in notes to Lines 11 and 12, Schedule 7b.

Line 11 -Operating Income allocated to special facilities for service to P.R.R. has been determined in the manner explained in notes to Lines 14 to 16, Schedule 7b.

Line 12 -The only Operation and Maintenance Expense allocated to special facilities for service to P.R.R. results from a direct allocation from accounting records. The ratio determined from this direct allocation of 1946 expense has been applied to the adjusted expenses.

Line 13 -General Expense has been allocated to special facilities for service to P.R.R. in the manner explained in notes to Line 3, Schedule 9b.

Line 14 -The General Taxes here allocated are as shown in Company records after deducting therefrom the Pennsylvania Income Tax. The ratio allocated to special facilities for service to the P.R.R. is a composite figure. Property and Capital Stock Taxes for Pennsylvania and Maryland were allocated in proportion to allocated investment in each state. Federal taxes other than income were allocated in proportion to Operation and Maintenance Expense. The Pennsylvania PUC assessment was allocated in proportion to the ratio of P.R.R. revenue to total revenues received from Pennsylvania business.

Lines 15 and 16 - Income taxes allocated to special facilities for services to P.R.R. have been computed on the allocated return shown in Line 11. The Pennsylvania tax has in turn been proportioned to investment in Pennsylvania. No totals or allocation ratios have been shown, since these taxes are unrelated to the total income taxes paid by Penn Water.

Line 17 -Depreciation Expense allocated is the amount proposed in the testimony of D. Gunn (T.288). The allocation ratio is that shown in Line 4.

Schedule 12a

Cost of Service Study

1946 Actual and Adjusted

Allocation to P.R.R. of Safe Harbor's Investment, Return and Expenses for Special Facilities Provided for Service to P.R.R.

	Actual			Adjusted

[24391]

Exhibit No. 378

4217

Schedule 12a

Schedule 12b

Cost of Service Study

1946 - Actual and Adjusted

Notes to Schedule 12a

Line 4 - The total investment in special facilities for service to P.R.R. shown in Line 3 has been divided by the total electric plant, shown in Line 3 of Schedule 6a.

Line 5 - The only Operation and Maintenance Expense allocated to special facilities for service to P.R.R. results from a direct allocation from accounting records. The ratio determined from this direct allocation of 1946 expense has been applied to the adjusted expenses.

Line 6 - General Expense has been allocated to special facilities for service to P.R.R. in the manner explained in note for Line 2, Schedule 10b.

Line 7 - The general taxes here allocated are as shown in Company records after deducting therefrom the Pennsylvania Income Tax. The ratio allocated to special facilities for service to the P.R.R. is a composite figure. Capital Stock and Property taxes were allocated on the basis of investment. Federal taxes other than income are related to Operation and Maintenance Expense and were allocated in the same ratios that Operation and Maintenance were allocated. Regulatory commission charges and Gross Receipts tax were not considered allocable to P.R.R.

Lines 8 and 9 - Income taxes allocated to special facilities for services to P.R.R. have been determined by reference to Schedule 8a. Taxes there shown in Lines 13 and 14 were reduced in the ratio of the respective investments in special facilities for service to P.R.R. and in plant allocated to Baltimore Company (as shown in Line 6 of Schedule 8a).

Line 10 - Depreciation expense allocated is the sum of the interest and annuity components. The allocation ratio is that shown in Line 4.

Line 12 - Operating income allocated to special facilities for service to P.R.R. has been determined by reference to Line 12 of Schedule 8a. The amount there shown was reduced in the ratio of the respective investments in special facilities for service to the P.R.R. and in plant allocated to Baltimore Company (as shown in Line 6 of Schedule 8a).

Cost of Service Study

1946 Actual and Adjusted

Determination of Baltimore Company's Share of Penn Water's and Safe Harbor's Total Costs for Special Facilities Provided for Service to P.R.R.

	Actual $1000 (1)	Adjusted $1000 (2)	Proportional Distribution of Item 13 Among Items 1,2,4, and 5: Actual $1000 (3)	Adjusted $1000 (4)
Penn Water's Costs for Special Facilities Provided for Service to P.R.R. (from Schedule 11a)				
1. Expenses	190	192	87	90
2. Return	144	144	66	67
3. Total	334	336	153	157
Safe Harbor's Costs for Special Facilities Provided for Service to P.R.R. (from Schedule 12a)				
4. Expenses	76	133	35	62
5. Return	129	129	60	60
6. Total	205	262	95	122
7. Total Penn Water and Safe Harbor Cost of Special Facilities for P.R.R.(3+6)	539	598	248	279
8. Cost to Baltimore Company for Benning Frequency Changer	78	78		
9. Total Cost of Special Facilities for P.R.R.(7+8)	617	676		
10. Ratio of Energy Delivered to P.R.R. in Maryland to Total Energy Delivered to P.R.R.	.528	.528		
11. Allocated Cost of Special Facilities Provided for P.R.R. Service in Maryland (9x10)	326	357		
12. Deduct: Cost of Special Facilities Paid Directly by Baltimore Company (Line 8)	78	78		
13. Balance = Baltimore Company's Share of Penn Water's and Safe Harbor's Total Costs for Special Facilities Provided for Service to P.R.R.	248	279		

Schedule 13b

Cost of Service Study

1946 - Actual and Adjusted

Notes to Schedule 13a

Lines 1 to 6 - The data in columns 1 and 2 have been taken directly from Schedules 11a and 12a. The data in the columns 3 and 4 are discussed later in these notes.

Line 8 - Baltimore Company pays to Potomac Electric Power Company specified charges in connection with the use of the Benning Frequency Changer for supply to P.R.R.

Line 10 - The ratio of energy delivered to P.R.R. in Maryland to total energy delivered to P.R.R. is based on the division of energy in 1946. In accordance with the memorandum received as Exhibit 11, Baltimore Company's share of the revenues received from P.R.R. is based on this same ratio.

Line 13 - Of the total cost of special facilities provided for service to P.R.R. in Maryland, Line 11, Baltimore Company pays directly to Potomac Electric Power Company the amount shown in Line 12. The balance is Penn Water's and Safe Harbor's cost for special facilities for service to P.R.R. in Maryland, or Baltimore Company's share of Penn Water's and Safe Harbor's total costs for special facilities provided for service to P.R.R. These costs must be added to Penn Water's and Safe Harbor's other costs for services to Baltimore Company.

Lines 1 to 6 - In columns 3 and 4, the total shown in Line 13 has been broken down proportionately among the expenses and returns of the two companies.

Schedule A

Comparison of
Bills for and Costs of
Penn Water's and Safe Harbor's
Firm Power Services
Rendered to Baltimore Company

1946 - Actual and Adjusted

	Actual	Adjusted (see note)
Total Costs Incurred in Rendering Firm Power Services to Baltimore Company (including PRR in Maryland)		
Penn Water	$ 3,606,000	$ 3,724,000
Safe Harbor	1,518,000	1,939,000
Combined Costs	$ 5,124,000	$ 5,663,000
Bills Applicable to Firm Power Services Rendered to Baltimore Company (see attached Schedules B and D)		
Penn Water*	$ 2,824,420	
Safe Harbor**	2,033,002	
Combined Bills (Applicable to Firm Power Services)	$ 4,857,422	
Excess of Costs over Amounts Billed (Applicable to Firm Power Services)	$ 266,578	

* The revenues received by Penn Water from Baltimore Company were less than the amounts billed (net bill basis) by $294,379.

** The revenues received by Safe Harbor from Baltimore Company were less than the amounts billed by $7,768.

The adjustments made to actual 1946 costs include the effects of authorized increases in plant investment, increases in expenses as estimated for the current year, and the elimination of the tax credit arising from the refunding of Safe Harbor's bonds.

Schedule B

January 8, 1947

MEMORANDUM TO: Mr. A. E. Penn, Sec'y., Consolidated Gas Electric Light and Power Company of Baltimore
Mr. Jas. L. Rintoul, Vice Pres., Pennsylvania Water & Power Company
Mr. C. A. Lappe, Treas., Safe Harbor Water Power Corporation

SAFE HARBOR COMPANY'S BILL TO BALTIMORE COMPANY AND HOLTWOOD COMPANY FOR THE YEAR 1946

(a)	7% on Accumulated Actual Investment of $30,169,472.88 as of Dec. 31, 1945		$ 2,111,863.10
(b)	Payment on net additions during 1946 at rate of 7% per annum		2,145.96
(c)	Expenses		
	1. Operating Expense	$ 290,126.86	
	2. Maintenance	146,262.40	
	3. General Expense	226,168.71	
	4. General Taxes	98,820.08	
	5. Federal Normal Tax and Surtax	None	
	6. Depreciation (Annuity only)	174,677.87	
	Total Expenses		936,055.92
(d)	Sum of (a) + (b) + (c)		$ 3,050,064.98
(e)	Rent from Electric Property		562.60
(f)	Net Bill for Year 1946 (d) - (e)		$ 3,049,502.38
(g)	Net Bill to Baltimore Company 2/3 of (f)		$ 2,033,001.59
(h)	Gross Amount billed to Baltimore Company for first eleven months of 1946		1,864,114.79
(i)	Net Balance due from Baltimore Company for December 1946		$ 168,886.80
(j)	Net Bill to Holtwood Company 1/3 of (f)		$ 1,016,500.79
(k)	Gross Amount billed to Holtwood Company for first eleven months of 1946		932,057.40
(l)	Net Balance due from Holtwood Company for December 1946		$ 84,443.39

This statement includes expenses and taxes with respect to rate proceedings referred to in a letter to Mr. N. B. Higgins from Mr. Wm. Schmidt, Jr., dated June 18, 1946.

MEMORANDUM TO MR. A. E. PENN
MR. JAS. L. RINTOUL

HOLTWOOD COMPANY'S BILL TO BALTIMORE COMPANY FOR DECEMBER 1946

The reference letters used below correspond to the Paragraph letters under Article III of the Supplemental Agreement of June 1, 1931, as amended by Supplemental Agreement of September 29, 1939.

(a)	NET POWER REVENUE OF HOLTWOOD COMPANY			
	1. 1930 Revenue Adjusted to Avg. River Flow		$ 2,832,259 75	
	2. Decrease in Revenue from Cust. other than Balto 1931 compared with 1930		70,080.06	
	3. Base Net Revenue			$ 2 762,179 69
(b)	PAYMENTS ON NET ADDITIONS AT 10.25% & 9.5%			895,3E3 47
(c)	EXPENSES			
	1. *Operating Exp (Excl. Power Purchased)		1,092,382.98	
	2. Maintenance		402,556.51	
	3. General Expense		906,281.37	
	4. General Taxes		304,170 26	
	5. Federal Normal Tax and Surtax		983,846.27	
	6. Depreciation	$ 355,146.73		
	Less: Adj. for Auto Depreciation	2,025 89	353,120.84	
	7 Total			4,042,364 23
	*Power Purchased shown in Item (d)			
(d)	HOLTWOOD COMPANY'S PAYMENTS FOR POWER PURCHASED			
	1. Metropolitan Edison Co.		1,598.10	
	2 Philadelphia Electric Co.		40,865 39	
	3 Pennsylvania Power & Light Co.		12,031 66	
	4 Safe Harbor Water Power Corporation		1,016,500.79	
	5 Total			1,070,995.94
	SUM OF (a), (b), (c) and (d)			8,770,925.33
(e)	HOLTWOOD COMPANY'S REVENUE FROM PARTIES OTHER THAN BALTO.			
	1. Pennsylvania Power & Light Co. (Firm Power)		1,944,484.32	
	2. Philadelphia Electric Co., (Firm Power)		948,860.95	
	3. Metropolitan Edison Co.(Firm Power)(Incl. Y.E.)		667,454.73	
	4 Pioneer Electric Light Co. (Firm Power)		13,871.33	
	5 Metropolitan Edison Co. (Interchange)		372,726.74	
	6. Philadelphia Electric Co. (Interchange)		489,438.93	
	7 Pennsylvania Power & Light Co. (Interchange)		320,028.21	
	8 Pennsylvania Railroad Company		1,625,575.45	
	9 Conowingo Backwater Payment		133,750.00	
	10. Rent from Electric Property		34.65	
	11 Total			6,516,225 31
(f)	INTEREST ON INCREASE IN RESERVE FOR DEPRECIATION			240,075.64
(h)	REDUCTION AS PER SUPPLEMENTAL AGREEMENT OF SEPT 29, 1939			600,000.00
(x)	MISCELLANEOUS CREDITS			15,293.28
	TOTAL DEDUCTIONS - SUM OF (e), (f), (h) and (x)			7,371,594 23

Schedule C
Page 2

(i)	NET BILL FOR YEAR 1946	$ 1,399,331.10
(j)	TOTAL AMOUNT BILLED FOR FIRST ELEVEN MONTHS OF 1946	1,489,826.96
(k)	CREDIT BALANCE TO BALTIMORE COMPANY FOR DECEMBER 1946	$ 90,495.86

NOTES:

Item (c)-3 includes all regulatory expenses incurred by Power in 1946, including certain regulatory expenses which are considered not to be "reasonable operating expenses" in the letters to Mr. J.A. Walls from Mr. Wm. Schmidt, Jr., dated June 18, 1946 and December 26, 1946.

Item (x) includes certain operating expenses of Power which it has absorbed for special reasons and credited to the bill payable by Electric.

G.W. Spaulding for Pennsylvania Water & Power Company

Schedule D

HOLTWOOD COMPANY'S FIRM POWER BILL TO BALTIMORE COMPANY FOR THE YEAR 1946

(a)	NET POWER REVENUE OF HOLTWOOD COMPANY			
	1. 1930 Revenue Adjusted to Avg. River Flow		$ 2,832,259.75	
	2. Decrease in Revenue from Quat. other than Balto. 1931 compared with 1930		70,080.06	
	3. Base Net Revenue			$2,762,179.69
(b)	PAYMENTS ON NET ADDITIONS AT 10.25% & 9.5%			895,385.47
(c)	EXPENSES			
	1. *Operating Exp. (Excl. Power Purchased)		$ 1,092,388.98	
	2. Maintenance		402,556.51	
	3. General Expense		906,281.37	
	4. General Taxes		304,170.26	
	5. Federal Normal Tax and Surtax		983,846.27	
	6. Depreciation	$355,146.73		
	Less Adj. for Auto Depreciation	2,025.89	353,120.84	
	7. Total			4,042,364.23

ESTIMATE OF FAIR MARKET VALUE AS OF MARCH 1, 1905 OF THE LANDS AND WATER RIGHTS REQUIRED TO CARRY OUT THE HOLTWOOD HYDRO-ELECTRIC DEVELOPMENT OF THE McCALL FERRY POWER COMPANY AND NOW OWNED BY THE PENNSYLVANIA WATER AND POWER COMPANY.

* * *

[24405] (page 5)

In arriving at the foregoing conclusions covering the fair market value of the lands and water rights required for the Holtwood hydro-electric development the following principal points were considered.

1. Market for power output; its extent and distance from the site of the development.

2. Competitive sources of power.

3. Extent of engineering information available regarding the site.

4. Natural advantages and disadvantages of the site.

5. Probable cost of construction.

6. Pondage and storage possibilities.

7. Stream flow characteristics.

8. Time when development may be carried out.

9. Possibilities of financing.

10. Yearly cost of producing the estimated output.

In the following the principal points enumerated above are covered in some detail.

1. Market for power output, its extent and distance from the site.

* * *

[24406] (page 6)

(a) With the Consolidated Gas Electric Light and Power Company of Baltimore, June 4, 1907, which provided for the sale of 4000 kw for an annual demand charge of $80,000. a year plus an energy charge of two mills per kw hr subject to various other minor provisions. This contract called originally for the supply of energy September 1, 1908, but provided for renewal.

(b) With the United Railways and Electric Company of Baltimore, dated June 28, 1907, which provided for sale of 10,000 kw for an annual demand charge of $200,000. and with an energy charge of two mills per kw hr, subject to other customary provisions. This contract also provided for extension. Both contracts provided for some increase in the amount of energy which could be taken.

On July 17, 1909 John E. Aldred had been appointed receiver of the McCall Ferry Power Company and the property had been purchased from the Bondholders Committee by the newly formed Pennsylvania Water and Power

Company on January 13, 1910. Mr. Aldred immediately initiated negotiations to secure new contracts at Baltimore.

(c) On August 29, 1910 a contract was executed between Pennsylvania Water and Power Company and the Consolidated Gas Electric Light and Power Company of Baltimore providing for purchase by the latter of not less than 70,000,000 kwh per year at four mills per kwh, with a maximum demand of 13,333 kw with provisions for the purchase of 50% more energy, with a maximum demand of 20,000 kw, bringing the total provided for up to 105,000,000 kwh per year at the same price.

(d) On February 8, 1911 a contract was executed between Pennsylvania Water and Power Company and the United Railways and Electric Company of Baltimore providing for the purchase by the latter of 12,000 kw "flat power" 24 hours per day but not to exceed 230,400 kwh during any 24 hour day based on a load factor of 80%. "Flat power" to be supplied at the rate of $24. per kw per annum. During low flow the Power Company had the right to reduce to 25% the amount of "flat power" supplied. "Surplus power" in excess of "flat power" to be taken week ends at the rate of 3 mills per kwh. used. At the option of the Railway Company an additional block of "flat power" could be taken not exceeding 6000 kw at the rate of 3.425 mills per kwh. Provisions were also made for the payment of 4 mills per kwh by the Power Company to the Railway Company for the generation by the Railway Company for its own use during periods when the Power Company was unable to supply the full amount of "flat power."

* * *

[24409] (page 9)

* * *

5. Probable cost of construction.

* * *

By the end of 1907 the Company had exhausted practically all of its available cash. At that time construction, exclusive of equipment, was about 80% complete. An additional [24410] (page 10) $3,753,000 in cash to carry on the construction was raised by the sale of additional securities in 1909.

By January 13, 1910, when the Pennsylvania Water and Power Company was organized, actual expenditures, exclusive of transmission lines but including land and water rights, amounted to $9,157,457.

During 1910 additional expenditures amounted to:

(a) Power Plant	$2,350,622
(b) Transmission lines	1,128,381
Total	$3,479,003

As of December 13, 1910 the total cost of land, plant and transmission lines amounted to:

(a) Power Plant	$11,508,079
(b) Transmission lines	1,128,381
Total	$12,636,460

At the end of 1910 one 13500 horse power unit was in operation and four 13,500 H.P. units were partly installed. This installation was completed by the latter part of 1911.

Actual commercial operation began October 1, 1911. Operation before this date was not continuous due to difficulties with turbines, generators and transformers. Actual generation during 1910 and 1911 was:

1910 — 8,979,500 kwh
1911 — 124,431,100 kwh

Total investment including land and transmission lines on September 30, 1911 was	$13,609,191
As of the same date the investment in power plant alone exclusive of land and transmission lines was about	$10,670,000

Net 1911 operating revenue before deduction for depreciation amounted to	$ 323,058
Total installed capacity Sept. 30, 1911 was	67,500 H.P.
Cost per H.P. of installed capacity, plant only	158
Cost per H.P. of installed capacity, land, plant, transmission lines and substations	202
By the end of 1914 two additional units of 17,000 H.P. each and one of 16,500 H.P. were in operation, 50,500 H.P. additional, or a total by December 31, 1914 of 118,000 H.P.	
Total investment on December 31, 1914 was	$15,582,829
As of the same date the investment in power plant alone, exclusive of land and transmission lines, was about	$11,659,000
Net 1914 operating revenue before deduction for depreciation amounted to	734,415

[24411] (page 11)

Cost per H.P. of installed capacity, plant only	$ 99
Cost per H.P. of installed capacity, land, plant transmission lines and substations	$ 132
During the early part of 1924 the installation of two more hydro units was completed, each of 20,000 H.P. capacity or 40,000 H.P. additional	
The total capacity of the plant during the latter part of 1924 and since that time was, therefore,	158,000 H.P.
Total investment on December 31, 1924 was	$20,706,078
As of the same date the investment in the power plant alone, exclusive of land and transmission lines was about	$15,530,000

Net 1924 operating revenue before deduction for depreciation amounted to	$ 1,756,535
Cost per H.P. of installed capacity, plant only	$ 98
Cost per H.P. of installed capacity, land, plant transmission lines and substations	$ 131
Name plate generating capacity:	
Original plant	42,500 kw
At present and since 1924	111,000 kw

* * *

[24415] (page 15)

* * *

10. Yearly cost of producing the estimated output.

By the end of 1910 conditions under which the property would be operated were fairly well established.

A contract for furnishing power had been made, the investment for the initial installation was well in hand and the project was fast approaching the going concern stage.

The following table shows the actual accumulated investment, annual cost exclusive of interest and depreciation, net operating revenue and return on the investment for the first ten years of operation.

Year	Output in Thousands of kw hrs.	Accumulated Investment December 31	Annual cost Exclusive of Depreciation	Net operating revenue before Depreciation	Return on Investment in %
1911	124,431.1	$13,609,191	$ 68,959	$ 323,058	2.37
1912	233,002.7	13,934,802	101,975	618,738	4.44
1913	252,772.3	14,668,273	117,048	664,433	4.53
1914	280,933.0	15,582,829	153,821	734,415	4.71
1915	345,771.1	15,620,830	176,408	943,431	6.04
1916	417,837.6	15,854,933	217,919	1,080,091	6.81
1917	516,891.0	16,126,658	445,051	1,246,641	7.73
1918	500,641.1	16,242,384	473,850	1,172,641	7.22
1919	512,138.8	16,303.435	558,810	1,269,681	7.79
1920	494,624.4	16,394,117	523,911	1,328,990	8.11

EXHIBIT No. 394.

[24463]

EXHIBITS ATTACHED TO HUTCHINSON'S PARTICIPATION

Exhibit No. 1—Morison's report to Hutchinson dated September 18, 1901; also Morison's supplemental report dated October 4, 1901 to Hutchinson.

Exhibit No. 2 — Same as agreement introduced in evidence as Exhibit No. 206.

Exhibit No. 3 — Morison's report to Hutchinson dated December 21, 1901 re McCall Ferry site.

Exhibit No. 4 — Two agreements, both dated February 26, 1902, one of which was entered into between Cary T. Hutchinson and Milton L. Fry and the other between Cary T. Hutchinson and Samuel D. Fry for the acquisition by Hutchinson of the Fry properties.

Exhibit No. 5 — Report prepared by Cary T. Hutchinson dated May 5, 1902, recommending higher dam, i.e., elevation 155 instead of 150.

Exhibit No. 6 — Same as agreement comprising Part 2 of Exhibit No. 27 except that last three pages of Part 2 of Exhibit No. 27 are not included.

Exhibit No. 7 — Same as agreement introduced in evidence as Exhibit No. 207.

Exhibit No. 8 — Same as Part 3 of Exhibit No. 27.

Exhibit No. 9 — Same as Part 4 of Exhibit No. 27.

Exhibit No. 13 — Same as Part 14 of Exhibit No. 27.

Exhibit No. 14 — Letter dated May 24, 1905, written by P. G. Bartlett to Messrs. McGaw, Harlow and Houseman, Baltimore, Maryland, and reading as follows:

[24464] (page 2)

"We enclose copies of the two agreements of the 27th day of April last with a clause added putting formally in writing the extension of time already arranged by telegram. If you will severally sign these papers, Mr. McGaw alone signing the clause added to the McGaw Bertron agreement, and return them to us so signed, we will have the same signed by Messrs. Harvey Fisk & Sons and Mr. Bertron.

"We would be glad to have Mr. Houseman call up Mr. Bartlett on the telephone, if possible, some time tomorrow (Thursday)."

[Balance of Exhibit 14 same as Part 15 of Exhibit 27]

Exhibit No. 15 — Same as Part 18 of Exhibit No. 27.

Exhibit No. 16 — Same as Part 19 of Exhibit No. 27.

Exhibit No. 17 — Letter dated June 19, 1905, written by Lorenzo Semple to Philip G. Bartlett, reading as follows:

"I send you herewith agreement between Cary T. Hutchinson and Susquehanna Contracting Company, duly signed by Mr. Hutchinson. I am also sending at the same time for Mr. Eddy's use, old deeds to Stony Island and Hartman Island.

Will you please have the checks drawn for the $750,000 to the order of Cary T. Hutchinson, making two checks, one for the sum of $155,000, which he will endorse to Beyer and Willson, and the other for the sum of $594,500."

"P.S. Page 3 agreement contracting co with Power co — Art I 'thirty-five' — should be 'thirty'. L.S."

Exhibit No. 18 — McCall Ferry common stock certificates (No. 11 for 150 shares; No. 12 for 1,000 shares; No. 13 for 18,840 shares; No. 30 for 1,000 shares; No. 32 for 17,840 shares; No. 43 for 1,000 shares).

Exhibit No. 19 — Cary T. Hutchinson's letter to Lorenzo Semple dated June 26, 1905, which is included as part of Part 24, Exhibit No. 27.

Exhibit No. 20 — Agreement dated May 28, 1909 between members of bondholders' committee and holders of bonds and preferred stock. Included as part of Part 49, Exhibit No. 27.

[24465]

SUMMARY OF CARY T. HUTCHINSON'S PARTICIPATION IN McCALL FERRY POWER COMPANY

In the spring of 1899, Charles Fairchild, a private banker of New York, seems to have become interested in financing the Susquehanna Electric Power Company hydroelectric project to the extent of obtaining an option to acquire the company. Fairchild engaged John Bogart, a consulting engineer, to make a study of the plans James H. Harlow had prepared for the development. Cary T. Hutchinson, a consulting electrical engineer, assisted in the study of this proposed development. The option appears to have expired on July 31, 1899, without further consideration of the project by Fairchild.

Sometime following Hutchinson's work on Bogart's report, a man named Coho, whom Hutchinson had known while working for General Electric Company, brought some Lancaster men to him for advice on the electric method of iron ore reduction. Two of these men were William F. Beyer and George B. Willson who, in addition to having an interest in iron ore deposits on Conestoga Creek, had promoted the development of two small hydroelectric plants on the same creek for supplying power to Lancaster.

Apparently successful on the Conestoga, Beyer and Willson formed a co-partnership with three others on September 28, 1899, naming it The York Furnace Power Company. The purpose of this company was to acquire property and rights near York Furnace on the Susquehanna incident to the development of hydroelectric power.

[24466] (page 2)

From July to October, 1900, a field party under the direction of H. W. Crawford was engaged in surveys and

flow observations for this group. Two reports and an estimate of cost for a power development near York Furnace were submitted that fall by Crawford. It was about this time that Hutchinson apparently became interested in Beyer and Willson's efforts to develop power on the Susquehanna.

Hutchinson, an electrical engineering consultant, apparently wanted some expert civil engineering advice before becoming too deeply involved in power development. Consequently, he arranged with George S. Morison, a member of the Panama Canal Commission and an outstanding civil engineer of his time, to make a detailed study of the York Furnace project. Hutchinson has stated that he and Morison first undertook the investigation and development of the river as partners, but that later he bought out Morison's interest and retained him as a consultant. Morison, apparently, continued in this latter capacity until his death in July, 1903. Morison engaged Boyd Ehle as resident engineer in charge of the field work. Ehle spent July and August, 1901, in the vicinity of York Furnace and then went to New York to work up the results of the surveys. Concurrently, Hutchinson was attempting to obtain power contracts with the idea of developing the York Furnace site.

On September 18, 1901, Morison submitted his report to Hutchinson, stating that while the project was much less attractive than Crawford had presented it, there were possibilities [24467] (page 3) of developing about a 30 ft. head without relocating the Columbia and Port Deposit Railroad tracks. Two weeks later, Morison submitted a supplementary report for a 40 ft. head which would involve relocation of the tracks. (See Exhibit #1)

About the first of October, 1901, Hutchinson made a payment of $3,500. to the partners of the York Furnace Power Company. For this, he presumably received some sort of an option on their property because later, in formally granting an option, acknowledgment of this payment is made as one of the considerations. (See Exhibit #2)

Meanwhile, the results of these studies did not appear sufficiently favorable to warrant further investigation at that location. At Hutchinson's request, they were continued downstream to a point about a mile below McCall Ferry. Ehle was in charge of the field work through October and most of November, 1901. On December 21, 1901, Morison submitted his report on the McCall site to Hutchinson. (See Exhibit #3) Two estimates were made: One, based on a dam crest at elevation 150 involving raising the railroad tracks for about a mile with little relocating; the other, for crest elevation 155 involving five miles of railroad relocation.

A dam at the McCall Ferry site with crest elevation of 150 would, of course, flood all the land which would have been flooded by a dam with the same crest elevation at the York Furnace location, so the change in location did not alter Hutchinson's need of keeping the York Furnace option in effect. [24468] (page 4) He, therefore, paid the partners an additional $2,000. on January 9, 1902. (See Exhibit #2) About this time, he interested his father-in-law, Henry F. Dimock, in the enterprise, and received financial assistance from him. On February 21, 1902, Hutchinson made an additional payment of $30,000. and had a formal option signed by all parties involved, which was later recorded in York County.

This option provided for an additional payment of $109,500. if exercised by January 1, 1903 and could be extended for another year by an additional payment of $10,000. (See Exhibit #2)

Lorenzo Semple of the firm of Coudert Brothers was one of the witnesses present at the signing of this agreement and was the attorney who represented Hutchinson. Semple represented Hutchinson's interests from this time until after the formation of the McCall Ferry Power Company.

About the same time that Hutchinson made the $30,000. payment on the York Furnace properties, he was negoti-

ating for the very important Fry properties. These included tracts on both sides of the river, islands, and the stock of the McCall's Ferry Company. There were two agreements executed. Samuel D. Fry's called for a consideration of $20,000. and Milton L. Fry's $50,000. (See Exhibit #4)

In the meantime, George K. McGaw, James H. Harlow and their associates, who had been active in forming township companies for water power developments along the Susquehanna, [24469] (page 5) continued their studies and the acquisition of land and water rights. There was considerable rivalry between this group and the Hutchinson-Dimock group, each trying to acquire property necessary for their own development and enough other property to interfere with their opponents. Each group also attempted to secure sufficient financial backing to purchase all the property and rights necessary for one development and begin construction.

Harlow-McGaw finally succeeded in purchasing the old Susquehanna and Tidewater Canals at Receiver's sale and took title to these canals in April, 1902. Title to the Tidewater Canal in Maryland was retained by Harlow and McGaw as individuals but that of the Susquehanna Canal in Pennsylvania was vested in the newly formed Susquehanna Canal and Power Company. The Hutchinson group, through Beyer, protested to the Secretary of the Commonwealth the reorganization of the Susquehanna Canal as the Susquehanna Canal & Power Company. A hearing was held, but the protest was of no avail.

Hutchinson and his associates having already paid $35,500. for the York Furnace option and having spent considerable for field work, engineering advice and acquisition of additional land and water rights were faced with the problem of securing rights from the Harlow-McGaw interests in order to abut their proposed dam on the York County side of the river and flood a portion of the canal.

[24470] (page 6)

Rights of eminent domain had not then been established for water power companies in Pennsylvania. On May 17, 1902, Hutchinson and Dimock engaged John G. Johnson of Philadelphia, an eminent authority on corporation law.

Under date of May 28, 1902, Johnson expressed the following opinions:

1. The Susquehanna Canal and Power Company could probably secure an injunction to prevent other interests flooding their canals.
2. It would be well to take steps without delay, for the organization of the proposed water power company, unless a compromise (with the Harlow-McGaw interests) within a short time is probable.
3. The difficulties which will be encountered at the hands of the opponents are of sufficient importance to justify purchasing all their rights at a price larger than the one which represents the intrinsic worth of the things to be purchased.

The Harlow-McGaw interests made further attempts to strengthen their position on the river in Pennsylvania by forming on May 23, 1902, township water power companies on both sides of the river from the Maryland-Pennsylvania state line to Columbia, Pa.

As previously stated, in December 1901, Morison had recommended the McCall Ferry site for a dam instead of the York Furnace site. On May 5, 1902, Hutchinson strongly recommended the higher dam (Elev. 155 instead of 150), and made an estimate of cost and earnings. (See Exhibit #5)

[24471] (page 7)

About this time Hutchinson and Dimock made an attempt to get control of the whole river and buy out the

Harlow-McGaw interests. They also attempted to get contracts for the sale of power in Baltimore and Lancaster.

On July 17, 1902, applications were made on behalf of the Hutchinson interests for charters for The Hillside Water and Power Company and Susquehanna Water and Power Company, the former in Lower Chanceford Township, York County, and the latter in Martic Township, Lancaster County. A protest against the formation of these companies was filed by Harlow-McGaw and although a hearing was held on August 28th, letters patent were issued for both companies on September 2nd. Subsequently, Beyer was elected president of both companies and Willson secretary.

As early as August, 1902, Semple had suggested that Hutchinson offer his Peach Bottom properties below McCall Ferry to the Harlow-McGaw interests in exchange for complete release by the latter of all holdings necessary for the development at McCall Ferry. In November, 1902, Johnson mentioned the possibilities of a compromise and gave as an alternative, getting a bill through the coming Legislature for the forfeiture of the canal charter on the grounds of "nonuser and misuser". Semple wanted Beyer to sound out the Harlow-McGaw group as to the price they would demand for flowage rights on the canal above McCall Ferry. Hutchinson [24472] (page 8) evidently received some terms for such a release but these terms are not known. Judging from Johnson's reaction when hearing them, they must have been quite unfavorable to the Hutchinson-Dimock interests.

Having been unsuccessful in their attempt to block recognition of the validity of the Susquehanna Canal and Power Company as a reorganization of the old Susquehanna Canal Company, the Hutchinson interests apparently attempted to have the canal charter rescinded by the Pennsylvania Legislature which convened on January 6, 1903.

Just before the close of the legislature the bill seemed assured of passage but the Hutchinson interests believed

the governor would veto it. The uncertainty on one hand of this group as to the final result and the apparent successful passage which the Harlow-McGaw group recognized, seemed to make both interests willing to compromise. This action resulted in an agreement whereby Hutchinson-Dimock obtained the rights to construct their dam across the canal conditioned on the installation and operation of canal navigation facilities. (See Exhibit #6)

Although this agreement called for execution of its terms within six months, it was subsequently extended to May 15, 1905.

By the middle of 1903 industrial conditions and the financial markets were unfavorable for attempting to [24473] (page 9) finance the development and it was necessary to extend existing options to avoid heavy cash expenditures in exercising them.

Holman, one of the York Furnace Power Company partners, refused to renew the option and it expired on January 1, 1904. It then became necessary for Beyer and Willson to buy out their opposing partner. This was done and a new option signed on April 14, 1904. The consideration stated in the new option was about $46,000. more than had been specified in the original one. It is not clear why this increase was made other than perhaps by $10,000. charged for renewal privileges in the old option.

The new option provided for the payment of $155,500. by January 1, 1906 with a privilege of annual renewals to January 1, 1909 by the payment of $5,000. on each renewal date. (See Exhibit #7) To guarantee faithful performance on the part of Beyer and Willson, they executed deeds of conveyance of all their properties to Hutchinson and placed them in escrow.

There had been but little activity in the prosecution of the McCall Development since the spring of 1904, but that the plans had not been entirely suspended was evidenced by the fact that on January 13, 1905, William Barclay Parsons, a prominent New York engineer, submitted to Cary T.

Hutchinson a plan for the proposed hydro power plant. (See Exhibit #8) [24474] (page 10) It may be well to review here briefly the engineers who are known to have worked on the project for the Hutchinson interests up to this time.

George S. Morison had been consulted in regard to the site for the McCall Ferry development and had submitted three reports to Hutchinson in the latter part of 1901. Boyd Ehle, who was engaged in the field work for Morison, continued to report to him until the end of 1902. It is presumed Morison continued interested in the development, if not active, until his death July 1, 1903. Major Josiah Pierce, Jr., had practically completed his study and report at the time of his death. Some time subsequent to Morison's death, William Barclay Parsons was asked to check over Morison's figures and submit a report to Hutchinson. His recommendation for the McCall dam was elevation 155 and his estimate of cost for the dam, power house, hydraulic and electrical equipment, substations and three transmission lines to Philadelphia was $4,041,000. Everything was included in this figure except land, water rights, etc. The plant could deliver 37,500 Kw. in Philadelphia during an average year on all but thirty days and during a dry year on all but one hundred days. An additional investment of not more than $1,000,000. in steam auxiliary would have been required to have enabled the plant to deliver 37,500 Kw. at all times in Philadelphia. (See Exhibit #8)

About the same time, Semple who was attorney for the [24475] (page 11) Hutchinson interests, was arranging to consolidate the Susquehanna and Hillside Water & Power Companies which had been incorporated in 1902 in townships on opposite sides of the river. The proposed dam and power house would lie within these townships.

Hutchinson-Dimock either owned in fee or had water power rights sufficient to construct a dam at McCall's Ferry. Harlow-McGaw, who owned the bed of the old

Susquehanna Canal, had also organized water power companies on each side of the river and projected a line of railroad upon one side of the river. All of these properties would have been affected by the proposed development of Hutchinson-Dimock; therefore, as previously mentioned, an agreement had been made in 1903 with Harlow-McGaw by which all opposition upon their part was to be removed.

The contemplated Hutchinson-Dimock plan called for a company with an authorized capital stock of $8,000,000., one-half in preferred and one-half in common, and an authorized issue of bonds of $8,000,000. The proposed company was to be called the Pennsylvania Power Company. A chain of township electric power companies was to be formed to effect the transmission of power to Lancaster and Philadelphia. Under the terms of a contract, Hutchinson was to receive $3,000,000. in preferred, a like amount in common stock and $6,000,000. of bonds. In return, Hutchinson was to convey all his real estate, [24476] (page 12) riparian rights, releases of damages, etc., owned by him along the Susquehanna River near McCall's Ferry. He would further agree to construct a dam, buildings, machinery, reservoirs, etc., for a complete electric water power plant and to erect transmission facilities for carrying power to Philadelphia, Lancaster and Baltimore or such places as might be necessary. The remaining securities were to be used to acquire all the other water power rights along the Susquehanna River to tide-water. (See Exhibit #9)

This plan was submitted to John G. Johnson, who, in his opinion on the proposal, agreed that the plan was substantially possible. (See Exhibit #9)

At the same time, Hutchinson prepared a form of underwriting agreement which, with minor changes, appeared in printed form under date of March 1, 1905. (See Exhibit #10) Although the Prospectus and Underwriting Agreement was dated March 1st there are indications that

it was not completed in its final printed form until after March 9th.

This underwriting agreement provided that Henry F. Dimock, S. R. Bertron, and Charles T. Barney were to be the Managers, with Knickerbocker Trust Company as the proposed "Trust Company," and Susquehanna Securities Company (to be incorporated later) as the proposed "Securities Company." It was intended to secure underwritings for $8,000,000. of First Mortgage Bonds at ninety per cent of par of a corporation to [24477] (page 13) be organized and to be called McCalls Ferry Power Company and to arrange whereby the Knickerbocker Trust Company would advance on the bonds so underwritten, seventy-five per cent of par. The subscribers were to receive a bonus of 50% in preferred stock. 40,000 shares of preferred stock and a like amount of common with a par value of $100. per share were to be issued. It was provided that subscriptions to $6,000,000. of bonds were needed before the agreement was to become effective. (See Exhibit #10)

The fundamental differences between the original Hutchinson-Dimock plan, as submitted to Johnson, and that as presented in the Underwriting Agreement of March 1st are: (1) that Hutchinson, as an individual, has been replaced by the "Susquehanna Securities Company" and (2) Charles T. Barney appears as the third member of the Syndicate Manager group.

While the Susquehanna Securities Company was never incorporated, the draft of its proposed charter discloses that Hutchinson was to own thirteen of the fifteen shares. (See Exhibit #11) Thus the substitution indicated as (1) in the preceding paragraph was not a change in control but merely the substitution of a corporation controlled by an individual for that individual personally.

Some subscriptions under the March 1st underwriting seem to have been obtained in the early part of March, principally from Lee, Higginson & Company's customers. Other subscriptions probably came in through other sources, but

it appears that the total received by the middle of March was [24478] (page 14) less than 50% of the required underwriting. We surmise that the response from solicitations indicated either extreme difficulty or complete failure in disposing of the bonds necessary to make the Underwriting Agreement effective.

Hutchinson has stated that Bertron became convinced that the Underwriting was more than his firm should have undertaken and approached Harvey Fisk & Sons to obtain their aid in financing. This apparently occurred some time between the tenth and the twenty-fifth of March 1905. If the financing could not be completed, the Hutchinson interests were confronted with the prospects of an indefinite delay in securing release of funds expended on the enterprise during the previous four years, as well as the possibility of the interests on the lower river securing sufficient financing to construct their plant, and gaining the desirable markets for power. They apparently chose the safer course of securing immediate financing even though it entailed relinquishing control of the enterprise.

The result of the negotiations was the March 25, 1905 Bond and Stock Purchase Agreement in which Harvey Fisk & Sons as "Bankers" undertook to complete the financing unsuccessfully started by the Hutchinson-Dimock group. Under Harvey Fisk & Sons' plan $8,000,000. par value of bonds of the McCall Ferry Power Co. (then called the Susquehanna Power Co.) were to be sold on the basis of each $1,000. bond and $450. of preferred stock yielding $900. cash. (See Exhibit #12) This plan also provided loans for the underwriters to approximately [24479] (page 15) the same extent as the Dimock-Bertron-Barney plan. It should be noted that these loans were actually made by the Knickerbocker Trust Company which was the bank designated to make the loans under the Dimock-Bertron-Barney underwriting. The terms upon which Harvey Fisk & Sons undertook the financing are not disclosed in our records, nor their arrangements with Bertron, Storrs and Griscom,

who seem to have become silent co-bankers in the new set-up.

From an analysis of the material in our possession, it appears that the Hutchinson group not only gave up their syndicate plans but also had to surrender control to Harvey Fisk & Sons. We have been unable to determine how this control was actually exercised.

It seems proper, at this point, to comment generally on the changes in the predominant interests that had taken place. Coudert Brothers who had been attorneys for Hutchinson in all of his preliminary work, had dropped into the background by June, 1905. Simpson, Thacher and Bartlett became the attorneys for McCall Ferry Power Company beginning in March, 1905. Harvey Fisk & Sons became the dominant interest as Bankers or Syndicate Managers and placed Wm. M. Barnum with the Company in important positions. Charles A. Coffin became prominent in the executive offices. S. R. Bertron took up some of the important negotiations and became a director. Lee, Higginson & Company took a large portion of the underwriting and became [24480] (page 16) active in the Company affairs. Hutchinson and Dimock, who had previously been in absolute control of the development, seem to have relinquished this control and held only a minority interest in the project. All of these changes came about at the time of the execution of the Underwriting Agreement of March 25, 1905, or shortly thereafter.

The Agreement of Merger and Consolidation between The Hillside Water and Power Company and Susquehanna Water and Power Company to form the McCall Ferry Power Company was executed under the date of April 1, 1905, and letters patent were issued on April 14th. This work was being carried out by Beyer under the direction of Semple, who in turn, was then keeping Simpson, Thacher and Bartlett informed of all legal matters previously under his control.

The capital stock of the McCall Company was to consist of ten shares of $100. par value each. The stock of the merging companies was to be exchanged on a share for share basis for stock in the new or McCall Company.

While the foregoing events were transpiring in regard to the McCall Ferry development financing, a promoter [24481] (page 17) named Charles D. Pullen had been active on the lower river below McCall's Ferry. On February 28, 1905, he obtained an option on all the Harlow-McGaw interests with the proviso that he must also secure both the Hutchinson-Dimock interests and those of the Susquehanna Power Company—another competing interest. All property and rights were to be placed in one corporation for a systematic development of the river. On March 21st, Pullen obtained an option on the Susquehanna Power Company rights. Apparently, unable to interest the Hutchinson-Dimock group in his proposition, he secured a new option from Harlow-McGaw not predicated on securing the McCall Ferry participation.

Apparently, Harlow-McGaw felt that the Hutchinson-Dimock group's success in obtaining financing for their McCall development had jeopardized any chance for immediate progress under the Pullen option. Accordingly, on April 18, Houseman presented a plan to Harvey Fisk & Sons for consolidation of all interests. The plan called for

enlarging the canal from tide-water to Wrightsville and Columbia, Pa., where a large reservoir was to be located. Here also were to be docks and landings and direct connections with the Pennsylvania and the Reading Railroad systems. The 200 ft. fall in the river was to be utilized by the development, under the supervision of James H. Harlow, of five hydro power plants capable of a combined output of 250,000 h.p. (See Exhibit #13) The McCall group, however, evidently did not desire to consider a consolidated [24482] (page 18) project. We have no papers in our file which indicate any change in this attitude, but on April 27, 1905, Harlow-McGaw disposed of all their properties, rights and other assets associated with their interest on the Susquehanna to Harvey Fisk & Sons. On the same date, McGaw executed an agreement with Bertron, transferring to him all his stocks in certain companies. These two agreements were deemed to be parts of the same transaction whereby Harlow-McGaw, in exchange for all their property, rights, and other stock, interests on the river were to receive from Harvey Fisk & Sons:

1. $200,000. in cash
2. $250,000. par in McCall Ferry Bonds
3. $100,000. par in McCall Ferry Common Stock (See Exhibit #14)

The agreement of April 27th, whereby Harlow-McGaw disposed of their holdings to Harvey Fisk & Sons for cash, bonds and stock, was made subject to the prior agreements of Harlow-McGaw with Pullen and, therefore, could be carried out only if Harvey Fisk & Sons purchased the Pullen option or waited for it to expire. Therefore, Bertron purchased Pullen's options on April 29th for $10,000. cash and 150 shares of McCall Ferry Power Company common stock.

In accordance with the provisions of the Bond and Stock Purchase Agreement, Harvey Fisk & Sons, on May 15, made arrangements for loans from the Knickerbocker

Trust Company totaling $4,424,400., the amount of the unpaid deferred subscriptions. The Trust Company was to make installment advances as called for from time to time from June 1, 1905. [24483] (page 19) Subsequent switching of class of subscriptions by certain underwriters reduced the total loan to $4,337,600.

Presumably, the necessary legal work for the execution of the major agreements of the McCall Company had been completed by the middle of June, 1905, for most of the important contracts were made about this time. The first event of significance was the incorporation of the Susquehanna Contracting Company which took place on June 12th, and was to the firm of Harvey Fisk & Sons substantially what the proposed Susquehanna Securities Company would have been to Dimock-Bertron-Barney under the March 1st underwriting. We assume that it provided the mechanics for legally issuing the McCall Ferry Power Company securities and relieved Harvey Fisk & Sons, as a partnership, from any possible future liability which might result from the financing.

On June 13th, the day following the incorporation of the Contracting Company, an agreement was executed between the McCall Company and the Contracting Company. It provided for the transfer to the McCall Company of all the property and flowage rights of both the Hutchinson-Dimock and the Harlow-McGaw interests, stock in the river companies which Harvey Fisk & Sons had purchased from Harlow-McGaw, and $6,400,000. in cash for plant construction and additional property acquisition. In return, the McCall Ferry Power Company agreed to issue to the Susquehanna Contracting Company $8,483,000. bonds, $4,116,500. preferred stock and $4,999,000. common stock. (See Exhibit #15)

[24484] (page 20)

On the next day, June 14th, the Contracting Company made an agreement for the purchase of all the property,

rights and interests of Cary T. Hutchinson. In return, it provided for the conveyance of the following consideration to Hutchinson:

1.	Cash	$ 750,000.
2.	Common Stock	4,884,000.
3.	Preferred Stock	400,000.
	Total	$6,034,000. (See Exhibit #16)

The $750,000. was paid in two checks. (See Exhibit #17) One check for $155,500. was endorsed to Beyer and Willson to exercise the York Furnace option. The other for $594,500. was, according to Hutchinson's statement, used by him to reimburse with interest, those who had made advances for the acquisition of lands and water power rights, and for engineering and legal services, traveling and office expenses and other necessary preliminary development costs. Hutchinson has told us that he has not retained records of these transactions, and does not remember the amounts of the various items of cost. We have found only fragmentary evidence concerning these expenditures and therefore they cannot be definitely classified.

As will be shown later, a voting committee was formed and voting trust certificates issued. We have been unsuccessful in locating any record of the voting trust certificates and have, therefore, been unable to trace the actual ownership of much of the common stock which, during the life of the voting trust, continued to stand in the name of the Contracting Company. The original ten shares of common stock, resulting from the consolidation of the Hillside and Susquehanna [24485] (page 21) Water and Power Companies, were issued to the original five incorporators. Subsequently, these seem to have been endorsed in blank, and held by Dimock and Hutchinson. Executed contracts and agreements account for the common stock, as follows:

Date	Certificate Number	Issued to	Shares
6/1/05	1–5	Two shares each to original incorporators—Held by Dimock and Hutchinson	10
	6–10	Cancelled (Not used on account of change in name of Company)	—
8/8/05	11	Susquehanna Contracitng Co.—(For Pullen)	150
"	12	Susquehanna Contracting Co.—(For McGaw, et al.)	1,000
"	13	Susquehanna Contracting Co.—(For Hutchinson Agreement)	18,840
"	14	Susquehanna Contracting Co.—(For Hutchinson Agreement)	30,000
		Total	50,000

It will be noted that Nos. 13 and 14 total the 48,840 shares mentioned in the agreement between the Contracting Company and Hutchinson. The fact that two certificates were issued to cover this transaction indicates that at least one certificate was probably intended to be assigned to someone other than Hutchinson. The stock book in our possession does not show that Certificate No. 14 for 30,000 shares was ever turned in for subdivision or cancellation. Certificate No. 13 for 18,840 shares was turned in for reissue according to the stock certificate book as follows:

Date	Certificate Number	Name	Shares
5/25/09	30	Thomas Newhall	1,000
7/14/09	43	Lorenzo Semple	1,000
7/14/09	45	Susquehanna Contracting Co.	16,840
		Total (See Exhibit #18).	18,840

[24486] (page 22)

Hutchinson has informed us that Newhall was an engineer who rendered services in connection with the relocation of the railroad tracks to permit the construction of

the dam. He also stated that his (Hutchinson's) stock was used as a common fund for certain payments of this kind. The shares which went to Semple were part of his compensation for services rendered to the promoters prior to Harvey Fisk & Sons first connection with the project. (See Exhibit #19) The fact that these shares came from the 18,840 block is the basis for the deduction that this block of stock was owned by the Hutchinson interests. It would, therefore, appear that the certificate for 30,000 shares representing 60% of the common stock probably went to the Bankers. A search of the McCall Company and Contracting Company books of account fails to reveal any payments to Harvey Fisk & Sons. The entire proceeds obtained from the underwriting were passed on for the use of the McCall development, no cash commission being retained by Harvey Fisk & Sons for disposing of the bonds. The Banking group certainly was paid in some manner, for it is inconceivable that such services were rendered gratis. It appears to have been the general practice of Bankers to accept stock as their compensation for securing underwriting in enterprises of this character. Certain others, whom we assume were associated with Harvey Fisk & Sons in the McCall Ferry enterprise, received common stock for their services; namely, Lee, Higginson & Company and Bertron, Storrs & Griscom. Being unable to find any other means of remuneration [24487] (page 23) for the Bankers except a small amount of preferred stock mentioned hereinafter and in consideration of their general practice under similar circumstances, we have concluded that Harvey Fisk & Sons and their associates must have accepted common stock as their chief compensation for the services they rendered the McCall Company.

On November 21, 1906, Bertron, Storrs and Griscom recorded the receipt of 12,462½ shares of common stock which is exactly one-quarter of the total issue after Pullen's 150 shares have been deducted. Since the common stock certificate book does not show the issuance of this

block, we assume it must have been in the form of voting trust certificates. As Bertron, Storrs and Griscom were associated with Harvey Fisk & Sons as Bankers in this underwriting, this block was probably part of the 30,000 shares we believe the Bankers received. Bertron, Storrs & Griscom subsequently furnished Lee, Higginson & Company 5,000 shares of common stock out of the 12,462½ shares they had received.

In addition to the common stock, there were 4,000 shares of preferred stock which were made a part of the Hutchinson contract consideration. Preferred Stock Certificate No. 1 was issued in the name of the Susquehanna Contracting Company, but it went, eventually, to persons other than Hutchinson. There is no other preferred stock certificate for 4,000 shares, so we feel certain that this Certificate No. 1 represents the 4,000 shares stated in the Hutchinson Agreement.

[24488] (page 24)

It has previously been stated that Harvey Fisk & Sons had signed an agreement with Harlow, McGaw and Houseman on April 27, 1905, whereby Harvey Fisk & Sons would acquire the canals and all other river property and interests of the Harlow-McGaw group upon the payment of $200,000. cash, $250,000. in bonds and $100,000. in common stock of the McCall Company. On June 14th, Harvey Fisk & Sons assigned this agreement to the Susquehanna Contracting Company, the latter assuming the payment obligations and receiving the property stipulated.

The following day (June 15th) an agreement was signed by the Contracting Company and Harlow, McGaw and Houseman, verifying the above assignment and arranging for the delivery of the McCall bonds and stock. This was countersigned by Harvey Fisk & Sons who guaranteed performance by the Susquehanna Contracting Company.

By an agreement dated June 15, 1905, the Knickerbocker Trust Company was made trustee under the mortgage securing the issue of McCall Ferry Power Company bonds.

On June 16th, Bertron, Storrs and Griscom assigned to the Contracting Company the option which they had acquired from Pullen on April 29th. On this day also, title to the property obtained from Harlow-McGaw was vested in A. P. Bartlett and Ross A. Mackey, who, in turn, executed a declaration of trust, naming the Susquehanna Contracting Company as beneficiary. Similar transactions were made June 20th regarding the property acquired from Hutchinson.

[24489] (page 25)

The following were elected directors of the McCall Ferry Power Company at the stockholders' meeting, August 8, 1905:

W. F. Beyer	Geo. B. Willson
Henry F. Dimock	A. C. Bedford
Charles A. Coffin	Wm. M. Barnum
Gardiner M. Lane	Rodman E. Griscom
William Barclay Parsons	W. Marriott Canby
E. J. Berwind	J. J. Hope
Cary T. Hutchinson	Pliny Fisk

S. R. Bertron

The directors then appointed an executive committee consisting of the following:

Henry F. Dimock
Charles A. Coffin
Wm. Barclay Parsons
Wm. M. Barnum

(Gardiner M. Lane) who was soon replaced by S. R. Bertron.

The officers were:

President	—H. F. Dimock
Vice President	—J. A. Keppleman
Secretary-Treasurer	—Wm. H. Barnum
Chief Engineer	—C. T. Hutchinson

In an agreement dated January 20, 1906, a Voting Committee was named consisting of H. F. Dimock, Wm. M. Barnum and S. R. Bertron. Other main provisions of the agreement were:

1. Stockholders were to deposit their stock with Harvey Fisk & Sons.
2. Certificates were to be assigned for transfer to Harvey Fisk & Sons who would hold the stock until November 1, 1908.
3. Harvey Fisk & Sons were to vote each share of stock deposited as directed in writing, signed by any two of the Voting Committee.
4. Harvey Fisk & Sons or any of the Voting Committee "may be depositors of stock hereunder."

[24490] (page 26)

Harvey Fisk & Sons kept the records of the stock deposited under this agreement and we believe these records were destroyed in 1924.

After the original financing, a change in plans for the development to materially increase the capacity, required more money than was originally provided. By the time the additional funds were needed, the financial market appears to have become unfavorable for financing. The Knickerbocker Trust Company went into receivership in the fall of 1907, but arrangements were made for it to complete the loan provided for in 1905. By mid-summer of 1908, the cash available to the McCall Company was practically exhausted.

In July 1908, the question was raised as to the possibility of using the unissued bonds to secure loans from the directors or others financially interested in keeping the company intact. It was apparently contemplated to obtain loans of $100,000. from each of the following:

1. Harvey Fisk & Sons
2. Lee, Higginson & Company
3. Bertron, Storrs and Griscom
4. C. A. Coffin
5. H. F. Dimock

However, for some reason not now known, Dimock failed to make his loan, although on October 28, 1908 loans of $100,000. each were made by the other four.

Construction had been started toward the close of 1905 and progressed uninterruptedly until the end of 1907, when failure of the Knickerbocker Trust Company, temporarily [24491] (page 27) interrupted the loans being made by that institution. When arrangements were made with the Receivers of the Trust Company for completion of the loan, work was resumed in the spring of 1908. As previously stated, the additional financing for the increased capacity of the plant had been postponed until the condition of the financial market precluded doing it successfully. Therefore, the 1908 work was curtailed commensurate with the available cash. This being exhausted by the fall of 1908, the work again closed down.

The McCall Ferry Power Company defaulted on its bond interest due December 15, 1908. Anticipating the inability of the company to meet its obligations, the holders of a large portion of the bonds outstanding asked the following to act as a Committee in the interests of holders of bonds and preferred stock:

Wm. M. Barnum
A. C. Bedford
S. R. Bertron
C. A. Coffin
G. M. Lane

Public announcement of the formation of this committee and the impending default was made to all bondholders on December 7, 1908 over the names of

Harvey Fisk & Sons
Lee, Higginson & Company
Bertron, Storrs and Griscom
H. F. Dimock
C. A. Coffin

With the announcement also went a request and agreement for the deposit with the committee of bonds and preferred stock.

[24492] (page 28)

William M. Barnum was elected Chairman of the Committee and a plan was presented to the Bondholders under date of May 28, 1909. (See Exhibit No. 20) Hutchinson, Sanderson and Porter and others attempted to prevent the deposit of bonds with this Committee, but, nevertheless, practically all of the Bondholders eventually agreed to this plan which resulted in a reorganization of the McCall Ferry Power Company to form the Pennsylvania Water & Power Company on January 13, 1910.

EXHIBIT No. 395.

[24493]

EXHIBITS ATTACHED TO FISK PARTICIPATION

Exhibit No. 1 — Same as Part 3 of Exhibit No. 27.

Exhibit No. 2 — Same as Part 4 of Exhibit No. 27.

Exhibit No. 3 — Same as Part 5 of Exhibit No. 27.

Exhibit No. 4 — Same as Part 6 of Exhibit No. 27.

Exhibit No. 5 — Same as Part 10 of Exhibit No. 27.

Exhibit No. 6 — Same as Part 14 of Exhibit No. 27.

Exhibit No. 7 — Letter dated May 27, 1905, written by P. G. Bartlett to Messrs. McGaw, Harlow and Houseman, Baltimore, Maryland, and reading as follows:

"We enclose copies of the two agreements of the 27th day of April last with a clause added putting formally in writing the extension of time already arranged by telegram. If you will severally sign these papers, Mr. McGaw alone signing the clause added to the McGaw Bertron agreement, and return them to us so signed, we will have the same signed by Messrs. Harvey Fisk & Sons and Mr. Bertron.

"We would be glad to have Mr. Houseman call up Mr. Bartlett on the telephone, if possible, some time tomorrow (Thursday)."

[Balance of Exhibit 7 same as Part 15 of Exhibit 27.]

Exhibit No. 8 — Includes (1) two form letters of Harvey Fisk & Sons dated May 3, 1905 and May 4, 1905, respectively, used in making allotment of McCall Ferry bonds to subscribers; (2) form letter of Harvey Fisk & Sons dated April 12, 1906 calling for third installment of 10% on or before May 3, 1906 from non-deferred subscribers; (3) three copies of forms used

by Harvey Fisk & Sons for the purpose of acknowledging receipt of installment payments.

Exhibit No. 9 — Photostat of record of Harvey Fisk & Sons recording receipt of $1,440,000 from McCall Ferry bond subscribers—first 20% payment—to the credit of Susquehanna Contracting Company on May 15, 1905. Record shows disbursements made by Susquehanna Contracting Company through Harvey Fisk & Sons totaling $1,007,716.22 (Bertron, Storrs & Griscom $10,022.12; Geo. K. McGaw and others $195,432.00; M. H. Houseman $5,000; Cary T. Hutchinson $594,500, $155,500; Simpson, Thacher & Bartlett $47,307).

[24494] (page 2)

Exhibit No. 10 — Same as Part 16 of Exhibit No. 27.

Exhibit No. 11 — Same as Part 18 of Exhibit No. 27.

Exhibit No. 12 — Same as Part 19 of Exhibit No. 27.

Exhibit No. 13 — McCall Ferry common stock certificates (No. 12 for 1,000 shares issued to Susquehanna Contracting Company, dated August 8, 1905; No. 13 for 18,840 shares issued to Susquehanna Contracting Company, dated August 8, 1905; No. 30 for 1000 shares issued to Thomas Newhall, dated May 25, 1909—part of 18,840 shares; No. 32 issued to Susquehanna Contracting Company for 17,840 shares, dated May 25, 1909).

Exhibit No. 14 — Letter dated May 27, 1938, written by J. O. Adams of Bertron, Griscom & Co., Inc., to James L. Rintoul, Penn Water. This letter is included as a part of Part 22 of Exhibit 27.

Exhibit No. 15 — Same as Part 11 of Exhibit No. 27.

Exhibit No. 16 — Includes photostats of three McCall Ferry preferred stock certificates (No. 1 for 4,000

shares, dated August 8, 1905, issued to Susquehanna Contracting Company; No. 216 for 200, dated November 7, 1908, issued to Electrical Securities Corporation; No. 217, dated November 7, 1908, issued to Susquehanna Contracting Company for 3,800 shares). Also embraces two letters, one dated November 12, 1908, written by Harvey Fisk & Sons to J. W. Young, Vice President of McCall Ferry, and the other dated November 18, 1908, written by Harvey Fisk & Sons to C. H. Keep, President, Knickerbocker Trust Company, New York City (See description of Exhibit No. 8 attached to Lee, Higginson participation).

Exhibit No. 17 — Same as Part 20 of Exhibit No. 27.

Exhibit No. 18 — Same as Part 44 of Exhibit No. 27.

Exhibit No. 19 — Agreement dated May 28, 1909 between members of bondholders' committee and holders of bonds and preferred stock. Included as a part of Part 49 of Exhibit No. 27.

[24495]

HARVEY FISK & SONS' PARTICIPATION IN McCALL FERRY POWER COMPANY

About 1895, a group of individuals became interested in the development of the lower reaches of the Susquehanna River for hydroelectric power. Those who became the most active in the engineering and promotion work were George K. McGaw, a Baltimore business man, James H. Harlow, a civil engineer, and M. H. Houseman, an attorney. We will refer to this group as "Harlow-McGaw". Five or six years later, Cary T. Hutchinson, an electrical engineer, also became interested in a hydroelectric development at about the same location. He engaged Beyer and Willson of Lancaster as his agents, sought legal advice from Lorenzo Semple of New York and obtained financial aid from his father-in-law, Henry F. Dimock. This group we will call the "Hutchinson-Dimock" interests.

Both groups made surveys, and engineering studies and began the acquisition of property and rights necessary for water power development. The Harlow-McGaw group planned a series of five developments between Wrightsville, Pa., and tide-water. Their principal holdings were in Maryland but by 1902, they were in possession of the old canals between tide-water and Wrightsville. The Hutchinson-Dimock group concentrated its acquisition efforts in Pennsylvania but also obtained enough parcels in Maryland to interfere with Harlow-McGaw.

Each group attempted to interest capital for further property acquisition and construction. Harlow-McGaw were advocates of low head developments while Hutchinson-Dimock favored relatively [24496] (page 2) high heads. Attempts had been made to consolidate their respective holdings, to sell to each other and to finance each plan of development. By the latter part of 1904, conditions had

improved sufficiently to warrant Hutchinson-Dimock making further efforts to finance their development.

Preparatory to financing, William Barclay Parsons, a prominent New York engineer, submitted a report on the proposed development at McCall's Ferry. His recommendation called for a dam of 155.0 elevation which was capable of delivering 37,500 kw. in Philadelphia during an average year on all but thirty days. The estimated cost of the dam, power house, hydraulic and electrical equipment, substations and three transmission lines to Philadelphia was $4,041,000. This figure did not include the cost of land, water rights, etc. (See Exhibit #1)

About the same time, Semple, who was attorney for the Hutchinson interests, was arranging to consolidate the Susquehanna and Hillside Water & Power Companies which had been incorporated in 1902 in townships on opposite sides of the river. The proposed dam and power house would lie within these townships.

Hutchinson-Dimock either owned in fee or had water power rights sufficient to construct a dam at McCall's Ferry. Harlow-McGaw owned the bed of the old Susquehanna Canal, had also organized water power companies on each side of the river and projected a line of railroad upon one side of the river. All of these properties would have been affected by the proposed development of Hutchinson-Dimock; therefore, an agreement was made with Harlow-McGaw by which [24497] (page 3) all opposition upon their part was to be removed.

The contemplated Hutchinson-Dimock plan called for a company with an authorized capital stock of $8,000,000., one-half in preferred and one-half in common, and an authorized issue of bonds of $8,000,000. The proposed company was to be called the Pennsylvania Power Company. A chain of township electric power companies was to be formed to effect the transmission of power to Lancaster and Philadelphia. Under the terms of a contract, Hutchinson was to receive $3,000,000. in preferred, a like amount

in common stock and $6,000,000. of bonds. In return, Hutchinson was to convey all his real estate, riparian rights, releases of damages, etc., owned by him along the Susquehanna River near McCall's Ferry. He would further agree to construct a dam, buildings, machinery, reservoirs, etc., for a complete electric water power plant and to erect transmission facilities for carrying power to Philadelphia, Lancaster and Baltimore or such places as might be necessary. The remaining securities were to be used to acquire all the other water power rights along the Susquehanna River to tide-water. (See Exhibit #2)

This plan was submitted to John G. Johnson, an outstanding corporation lawyer of Philadelphia for approval. Johnson, in his opinion on the proposal, agreed that the plan was substantially possible. (See Exhibit #2)

At the same time, Hutchinson prepared a form of underwriting agreement which, with minor changes, appeared in printed form under date of March 1, 1905. Although the Prospectus and [24498] (page 4) Underwriting Agreement was dated March 1st, there are indications that it was not completed in its final printed form until after March 9th.

This underwriting agreement provided that Henry F. Dimock, S. R. Bertron, and Charles T. Barney were to be the Managers, with Knickerbocker Trust Company as the proposed "Trust Company", and Susquehanna Securities Company (to be incorporated later) as the proposed "Securities Company". It was intended to secure underwritings for $8,000,000. of First Mortgage Bonds of a corporation to be organized and to be called McCalls Ferry Power Company, at ninety per cent of par, and to arrange whereby the Knickerbocker Trust Company would advance on the bonds so underwritten seventy-five per cent of par. The subscribers were to receive a bonus of 50% in preferred stock. It was provided that subscriptions to $[illegible],000,000. of bonds were needed before the agreement was to become effective. (See Exhibit #3)

The fundamental differences between the original Hutchinson-Dimock plan, as submitted to Johnson, and that as presented in the Underwriting Agreement of March 1st are: (1) that Hutchinson, as an individual, has been replaced by the "Susquehanna Securities Company" and (2) Charles T. Barney appears as the third member of the Syndicate Manager group.

While the Susquehanna Securities Company was never incorporated, the draft of its proposed charter discloses that Hutchinson was to own thirteen of the fifteen shares. (See Exhibit #4) Thus the substitution indicated as (1) in the preceding paragraph was not a change in control but merely the substitution of a corporation controlled by an individual for that individual himself.

[24499] (page 5)

Some subscriptions under the March 1st underwriting seem to have been obtained in the early part of March, principally from Lee, Higginson & Company's customers. Other subscriptions probably came in through other sources, but it appears that the total received by the middle of March was less than 50% of the required underwriting. We surmise that the response from solicitations indicated either extreme difficulty or complete failure in disposing of the bonds necessary to make the Underwriting Agreement effective.

Hutchinson has stated that Bertron became convinced that the Underwriting was more than his firm should have undertaken and approached Harvey Fisk & Sons to obtain their aid in financing. This apparently occurred some time between the tenth and the twenty-fifth of March, 1905. If the financing could not be completed, the Hutchinson interests were confronted with the prospects of an indefinite delay in securing release of funds expended on the enterprise during the previous four years, as well as the possibility of the interests on the lower river securing sufficient

financing to construct their plant, and gaining the desirable markets for power. They apparently chose the safer course of securing immediate financing even though it entailed relinquishing control of the enterprise.

The result of the negotiations was the March 25, 1905, Bond and Stock Purchase Agreement in which Harvey Fisk & Sons as "Bankers" undertook to complete the financing unsuccessfully started by the Hutchinson-Dimock group. Under the Harvey Fisk & Sons' plan, $8,000,000 par value of bonds were to be sold on [24500] (page 6) the basis of each $1000.00 bond and $450.00 of preferred stock yielding $900.00 cash. At the time of this underwriting agreement this Company's proposed name was Susquehanna Power Co. This plan also provided loans for the underwriters to approximately the same extent as the Dimock-Bertron-Barney plan. (See Exhibit #5). It should be noted that these loans were actually made by the Knickerbocker Trust Company which was the bank designated to make the loans under the Dimock-Bertron-Barney underwriting. The terms upon which Harvey Fisk & Sons undertook the financing are not disclosed in our records nor their arrangements known with Bertron, Storrs and Griscom who seem to have become silent co-bankers in the new set-up.

We have evidence that some of the subscribers who were customers of Lee, Higginson & Company received the 50% bonus of the March 1st agreement while others received only the 45% provided for in the March 25th agreement. There were also other subscribers who were not Lee, Higginson & Company customers but who also received a 50% bonus. This suggests the probability that some subscriptions were obtained by the Syndicate Managers prior to Harvey Fisk & Sons' entrance into the project. On the date of the final Bond and Stock Purchase Agreement, Bertron Storrs and Griscom wrote Lee, Higginson & Company, stating that they would receive the 50% bonus on their $2,000,000. subscription. These facts indicate that the

Dimock-Bertron-Barney Syndicate obtained the right from Harvey Fisk to fulfill obligations already made.

[24501] (page 7)

From an analysis of the material in our possession, it appears that the Hutchinson group not only gave up their syndicate plans but also had to surrender control to Harvey Fisk & Sons. We have been unable to determine how this control was actually exercised.

Among the firm members of Harvey Fisk & Sons was Wm. M. Barnum who became a prominent figure in the McCall Ferry Power Company, being a director and member of the executive committee, and later was Chairman of the Reorganization Committee. He remained a partner of Harvey Fisk & Sons until July 1, 1908, when he resigned.

It seems proper, at this point, to comment generally on the changes in the predominant interests that had taken place. Coudert Brothers who had been attorneys for Hutchinson in all of his preliminary work, had dropped into the background by June, 1905. Simpson, Thacher and Bartlett became the attorneys for McCall Ferry Power Company beginning in March, 1905. Harvey Fisk and Sons became the dominant interest as Bankers or Syndicate Managers and placed Wm. M. Barnum with the Company in important positions. Charles A. Coffin became prominent in the executive offices. S. R. Bertron took up some of the important negotiations and became a director. Lee, Higginson & Company took a large portion of the underwriting and became active in the Company affairs. Hutchinson and Dimock, who had previously been in absolute control of the development seemed to have [24502] (page 8) relinquished their control and to have retained only a minority interest in the project. All of these changes took place about the time of the execution of the Underwriting Agreement of March 25, 1905, or shortly thereafter.

The Agreement of Merger and Consolidation between the Hillside Water and Power Company and Susquehanna Water and Power Company to form the McCall Ferry Power Company was executed under the date of April 1, 1905, and letters patent were issued on April 14. This work was being carried out by Beyer under the direction of Semple, who, in turn, was then keeping Simpson, Thacher and Bartlett informed of all legal matters previously under his control.

While the foregoing events were transpiring in regard to the McCall Ferry development financing, a promoter named Charles D. Pullen had been active on the lower river below McCall's Ferry. On February 28, 1905, he obtained an option on all the Harlow-McGaw interests with the proviso that he must also secure both the Hutchinson-Dimock interests and those of the Susquehanna Power Company, another competing interest. All property and rights were to be placed in one corporation for a systematic development of the river. On March 21, Pullen obtained an option on the Susquehanna Power Company rights. Apparently, unable to interest the Hutchinson-Dimock group in his proposition, he secured a new option from Harlow-McGaw not predicated on securing the McCall Ferry participation.

[24503] (page 9)

Apparently Harlow-McGaw felt that the Hutchinson-Dimock group's success in obtaining financing for their McCall development had jeopardized any chance for immediate progress under the Pullen option. Accordingly on April 18, Houseman presented a plan to Harvey Fisk & Sons for consolidation of all interests. The plan called for enlarging the canal from tidewater to Wrightsville and Columbia, Pa., where a large reservoir was to be located. Here also were to be docks and landings and direct connections with the Pennsylvania and the Reading railroad systems. The 200 ft. fall in the river was to be utilized by the

development under the supervision of James H. Harlow of five hydro power plants capable of a combined output of 250,000 h.p. (See Exhibit #6) The McCall group, however, evidently did not desire to consider a consolidated project. We have no papers in our file which indicate any change in this attitude, but on April 27, 1905, Harlow-McGaw disposed of all their properties, rights and other assets associated with their interest on the Susquehanna to Harvey Fisk & Sons. On the same date, McGaw executed an agreement with Bertron, transferring to him all his stocks in certain companies. These two agreements were deemed to be parts of the same transaction whereby Harlow-McGaw, in exchange for all their property, rights, stock, and other interests on the river were to receive from Harvey Fisk & Sons:

1. $200,000. in cash
2. $250,000. par of McCall Ferry Bonds
3. $100,000. par of McCall Ferry Common Stock (See Exhibit #7)

[24504] (page 10)

The agreement of April 27th, whereby Harlow-McGaw disposed of their holdings to Harvey Fisk & Sons for cash, bonds and stock, was made subject to the prior agreements of Harlow-McGaw with Pullen and, therefore, could be carried out only if Harvey Fisk & Sons purchased the Pullen options or waited for it to expire. Therefore Bertron purchased Pullen's options on April 29 for $10,000. cash and 150 shares of McCall Ferry Power Company common stock.

Those subscribers who elected to defer payment were, like the non-deferred subscribers, required to make a first payment of twenty per cent based on the net amount of the price of the bonds at ninety. All of the first 20 per cent payments were evidently made promptly for on May 15, there was recorded the amount of $1,440,000. to the credit

of the proposed Susquehanna Contracting Company. (See Exhibit #9) Calls were subsequently made periodically upon the non-deferred subscribers in amounts of ten per cent each. (See Exhibit #8) Interest at the rate of five per cent per annum was to be credited upon the amounts paid until the delivery of the bonds and stock after final payment had been made. The deferred subscribers were granted until Nov. 1, 1908 to make their final payment of eighty per cent.

In accordance with the provisions of the Bond and Stock Purchase Agreement, Harvey Fisk & Sons, on May 15, made arrangements for loans from the Knickerbocker Trust Company [24505] (page 11) totaling $4,424,400., the amount of the unpaid deferred subscriptions. The Trust Company was to make installment advances as called for from time to time from June 1, 1905. The terms of this arrangement, as contracted for between Harvey Fisk & Sons and Knickerbocker Trust Company provided for an interest rate of six per cent per annum on the amount of the loan outstanding plus an annual commission of one-half of one per cent for each year the agreement was to be in force. The loan arrangement was to continue for three years and the loans were to be made to the Susquehanna Contracting Company, then in the formative stage. (See Exhibit #10) This company was created and controlled by Harvey Fisk & Sons.

Presumably, the necessary legal work for the execution of the major agreements of the McCall Company had been completed by the middle of June, 1905, for most of the important contracts were made about this time. The first event of significance was the incorporation of the Susquehanna Contracting Company which took place on June 12, and was to the firm of Harvey Fisk & Sons substantially what the proposed Susquehanna Securities Company would have been to Dimock-Bertron-Barney under the March first underwriting. We assume that it provided the mechanics for legally issuing the McCall Ferry Power Com-

pany securities and relieved Harvey Fisk & Sons, as a partnership, from any possible future liability which might result from the financing.

[24506] (page 12)

On June 13th, the day following the incorporation of the Contracting Company, an agreement was executed between the McCall Company and the Contracting Company. It provided for the transfer to the McCall Company of all the property and flowage rights of both the Hutchinson-Dimock and the Harlow-McGaw interests, stock in the river companies which Harvey Fisk & Sons had purchased from Harlow-McGaw, and $6,400,000. in cash for plant construction and additional property acquisition. In return the McCall Ferry Power Company agreed to issue to the Susquehanna Contracting Company $8,483,000. bonds, $4,116,500. preferred stock and $4,999,000. common stock. (See Exhibit #11)

On the next day, June 14th, the Contracting Company made an agreement for the purchase of all the property, rights and interests of Cary T. Hutchinson. In return it provided for the conveyance of the following consideration to Hutchinson.

Cash	$ 750,000.
Common Stock	4,884,000.
Preferred Stock	400,000.
Total	$6,034,000. (See Exhibit #12)

The $750,000, was paid in two checks. (See Exhibit #9) One check for $155,500. was endorsed to Beyer and Willson to exercise the York Furnace option. The other for $594,500. was, according to Hutchinson's statement, used by him to reimburse with interest, those who had made advances for the acquisition of lands and water power rights, and for engineering and legal services, traveling and

office expenses [24507] (page 13) and other necessary preliminary development costs. Hutchinson has told us that he has not retained records of these transactions, and does not remember the amounts of the various items of cost. We have found only fragmentary evidence concerning these expenditures and therefore they cannot be definitely classified.

As will be later shown, a voting committee was formed and voting trust certificates issued. We have been unsuccessful in locating any record of the voting trust certificates and have, therefore, been unable to trace the actual ownership of much of the common stock which, during the life of the voting trust, continued to stand in the name of the Contracting Company. The original ten shares of common stock, resulting from the consolidation of the Hillside and Susquehanna Water and Power Companies, were issued to the original five incorporators. Subsequently, these seem to have been endorsed in blank, and held by Dimock and Hutchinson. Executed contracts and agreements account for the common stock, as follows:

Date	Certificate Number	Issued To	Shares
6-1-1905	1-5	Two shares each to original incorporators—Held by Dimock and Hutchinson	10
	6-10	Cancelled (Not used on account of change in name of company)	—
8-8-1905	11	Susquehanna Contracting Company (For Pullen)	150
8-8-1905	12	Susquehanna Contracting Company (For McGaw, et al.)	1,000
8-8-1905	13	Susquehanna Contracting Company (For Hutchinson Agreement)	18,840
8-8-1905	14	Susquehanna Contracting Company (For Hutchinson Agreement)	30,000
		Total	50,000

[24508] (page 14)

It will be noted that Nos. 13 and 14 total the 48,840 shares called for by the agreement between the Contracting Company and Hutchinson. The fact that two certificates were issued to cover this transaction indicates that at least

one certificate was probably intended to be assigned to someone other than Hutchinson. The stock book in our possession does not show that Certificate No. 14 for 30,000 shares was ever turned in for subdivision or cancellation. Certificate No. 13 for 18,840 shares was turned in for re-issue according to the stock certificate book as follows:

Date	Certificate No.	Name	Shares
5-25-1909	30	Thomas Newhall	1,000
7-14-1909	43	Lorenzo Semple	1,000
7-14-1909	45	Susquehanna Contracting Co.	16,840
		Total	18,840

(See Exhibit #13)

Hutchinson has informed us that Newhall was an engineer who rendered services in connection with the relocation of the railroad tracks to permit the construction of the dam. He also stated that his (Hutchinson's) stock was used as a common fund for certain payments of this kind. The shares which went to Semple were part of his compensation for services rendered to the promoters prior to Harvey Fisk & Sons first connection with the project. The fact that these shares came from the 18,840 block is the basis for the deduction that this block of stock was owned by the Hutchinson interests. It would therefore appear that the certificate for 30,000 shares [24509] (page 15) representing 60% of the common stock probably went to the Bankers. A search of the McCall Company and Contracting Company books of account fails to reveal any payments to Harvey Fisk & Sons. The entire proceeds obtained from the underwriters were passed on for the use of the McCall development, no cash commission being retained by Harvey Fisk & Sons for disposing of the bonds. The Banking group certainly was paid in some manner for to say that such services were rendered gratis is inconceiv-

able. It appears to have been the general practice of Bankers to accept stock as their compensation for securing underwriting in undertakings of this kind. Certain others whom we assume were associated with Harvey Fisk & Sons in the McCall Ferry enterprise received common stock for their services; namely, Lee, Higginson & Company and Bertron, Storrs & Griscom. Being unable to find any other means of remuneration for the Bankers, except a small amount of preferred stock mentioned hereinafter, and in consideration of their general practice under similar circumstances, we have concluded that Harvey Fisk & Sons and their associates must have accepted common stock as their chief compensation for the services they rendered the McCall Company. (See Exhibit #13)

On November 21, 1906, Bertron, Storrs and Griscom recorded the receipt of 12,462½ shares of common stock. (See Exhibit #14) which is exactly one quarter of the total issue [24510] (page 16) after Pullen's 150 shares have been deducted. Since the common stock certificate book does not show the issuance of this block, we assume it must have been in the form of voting trust certificates. Bertron, Storrs and Griscom was one of the banking firms associated with Harvey Fisk & Sons in this underwriting and we therefore assume that this block of stock came from the 30,000 shares assigned to the Bankers. On March 25, 1905, Bertron, Storrs and Griscom promised Lee, Higginson & Company 5,000 shares of common stock, representing a 25% commission on the $2,000,000. subscriptions Lee, Higginson & Company agreed to underwrite. (See Exhibit #15) In fulfillment of this promise Bertron, Storrs and Griscom gave Lee, Higginson & Company 5,000 shares of common stock out of the 12,462½ shares they had received. (See Exhibit #14).

In addition to the common stock, there were 4,000 shares of preferred stock which were made a part of the Hutchinson contract consideration. Preferred Stock Certificate No. 1 was issued in the name of the Susquehanna

Contracting Company, but it went, eventually, to persons other than Hutchinson. There is no other preferred stock certificate for 4,000 shares, so we feel certain that this Certificate No. 1 represents the 4,000 shares stated in the Hutchinson Agreement. The persons who finally received the shares represented by this certificate are here set [24511] (page 17) forth:

Date	*Ctf. No.*	*Transferee*	*No. Shares*
11-7-08	216	Electrical Securities Corporation	200
	243	Bertron, Storrs and Griscom	1,100
	244	Estate — Eugene Griffin	25
	245	C. A. Coffin	100
	246	Essex Trust Company	12½
	247	Electrical Association	50
	248	E. W. Rice, Jr.	10
	249	M. A. Viele	12½
	250	I. S. Keeler	2½
	251	Estate — E. R. Coffin	12½
	252	S. Z. Mitchell	7½
	253	Hinsdill Parsons	12½
	254	A. E. Burchard	5
	255	Union Trust Company	50
	256	H. C. Frick	100
	257	Charles Pratt & Company	125
	258	J. F. Shaw	25
	259	S. M. Hamill	25
	260	C. A. Coffin	125
	261	Lee, Higginson & Company	125
	262	Harvey Fisk & Sons	1,875
		Total	4,000

From certain papers in our files, we have made the assumption that a large portion of the above shares of preferred stock was issued to these subscribers to increase their bonus from 45% to 50%. Those who, we have assumed

would receive the 50%, were the persons who had subscribed to the Dimock-Bertron-Barney Underwriting Agreement of March 1, 1905. The majority of these appear to have been Lee, Higginson & Company, Bertron, Storrs and Griscom, or C. A. Coffin subscribers. All of those who received these 4,000 shares were associated with the above three firms or individuals except Chas. Pratt & Company, H. C. Frick, Estate of Eugene Griffin, and Harvey Fisk & Sons. If we give consideration to the number of bonds subscribed [24512] (page 18) for by Harvey Fisk & Sons as a firm, the necessary bonus to bring their preferred stock to the 50% amount would not exceed 50 shares. It, therefore, appears that 1,875 shares of preferred stock went to Harvey Fisk & Sons, a like amount went to the subscribers who had become committed under the March 1st underwriting plan and the remainder went to other persons already mentioned. (See Exhibit #16).

On June 14, 1905, Harvey Fisk & Sons assigned to the Susquehanna Contracting Company their loan arrangement of May 15th with the Knickerbocker Trust Company. This assignment provided that Harvey Fisk & Sons would assign to the Contracting Company all their rights under the McCall Company bond and stock purchase agreements and the loan arrangement with the Knickerbocker Trust Company. They reserved, however, the right to repurchase the McCall bonds at ninety. The Contracting Company then agreed to discharge all obligations of Harvey Fisk & Sons under these agreements and appointed Harvey Fisk & Sons its agents for the performance of these assumed obligations. (See Exhibit #10).

It has previously been stated that Harvey Fisk & Sons had signed an agreement with Harlow, McGaw and Houseman on April 27, 1905, whereby Harvey Fisk & Sons would acquire the canals and all other river property and interests of the Harlow-McGaw group upon the payment of $200,000. cash, $250,000. in bonds and $100,000. in common stock of the McCall [24513] (page 19) Company. On

June 14th, Harvey Fisk & Sons assigned this agreement to the Susquehanna Contracting Company, the latter assuming the payment obligations and receiving the property stipulated in the agreement.

The following day (June 15th) an agreement was signed by the Contracting Company and Harlow, McGaw and Houseman, verifying the above assignment and arranging for the delivery of the McCall bonds and stock. This was countersigned by Harvey Fisk & Sons who guaranteed performance by the Susquehanna Contracting Company.

By an agreement dated June 15, 1905, the Knickerbocker Trust Company was made trustee under the mortgage securing the issue of McCall Ferry Power Company bonds.

On June 16th, Bertron, Storrs and Griscom assigned to the Contracting Company the option which they had acquired from Pullen on April 29th. On this day also, title to the property obtained from Harlow-McGaw was vested in A. P. Bartlett and Ross A. Mackey, who, in turn, executed a declaration of trust, naming the Susquehanna Contracting Company as beneficiary. Similar transactions were made June 20th regarding the property acquired from Hutchinson.

The following were elected directors of the McCall Ferry Power Company at the stockholders' meeting, August 8, 1905:

[24514] (page 20)

W. F. Beyer	Geo. B. Willson
Henry F. Dimock	A. C. Bedford
Charles A. Coffin	Wm. M. Barnum
Gardiner M. Lane	Rodman E. Griscom
William Barclay Parsons	W. Marriott Canby
E. J. Berwind	J. J. Hope
Cary T. Hutchinson	Pliny Fisk

S. R. Bertron

The directors then appointed an executive committee consisting of the following:

Henry F. Dimock
Charles A. Coffin
Wm. Barclay Parsons
Wm. M. Barnum
(Gardiner M. Lane) who was soon replaced by S. R. Bertron.

The officers were:

President	— H. F. Dimock
Vice-President	— J. A. Keppleman
Secretary-Treasurer	— Wm. H. Barnum
Chief Engineer	— C. T. Hutchinson

Arrangements had been made by Harvey Fisk & Sons for the Knickerbocker Trust Company to make loans on the uncalled balances of the stock and bond purchase agreements as previously outlined. The actual loan agreement was signed by the Susquehanna Contracting Company and the Knickerbocker Trust Company on November 1, 1905.

In an agreement dated January 20, 1906, a Voting Committee was named as consisting of H. F. Dimock, W. M. Barnum and S. R. Bertron. Other main provisions of the agreement were:

1. Stockholders were to deposit their stock with Harvey Fisk & Sons.
2. Certificates were to be assigned for transfer to Harvey Fisk & Sons who would hold the stock until November 1, 1908.

[24515] (page 21)

3. Harvey Fisk & Sons were to vote each share of stock deposited as directed in writing, signed by any two of the Voting Committee.

4. Harvey Fisk & Sons or any of the Voting Committee "may be depositors of stock hereunder."

(See Exhibit #17)

Harvey Fisk & Sons kept the records of the stock deposited under this agreement and we believe these records were destroyed in 1924.

Harvey Fisk & Sons appear to have acted as transfer agents for the McCall Company securities until November, 1908. At the end of this period, Knickerbocker Trust Company became transfer agent.

After the original financing a change in plans for the development to materially increase the capacity required more money than was originally provided. By the time the additional funds were needed the financial market appears to have become unfavorable for financing. The Knickerbocker Trust Company went into receivership in the fall of 1907, but arrangements were made for it to complete the loan provided for in 1905. By mid-summer of 1908, the cash available to the McCall Company was practically exhausted.

In July, 1908, the question was raised as to the possibility of using the unissued bonds to secure loans from the directors or others financially interested in keeping the company intact. It was apparently contemplated to obtain loans of $100,000. from each of the following:

[24516] (page 22)

1. Harvey Fisk & Sons
2. Lee, Higginson & Company
3. Bertron, Storrs and Griscom
4. C. A. Coffin
5. H. F. Dimock

However, for some reason not now known, Dimock failed to make his loan, although on October 28, 1908 loans of $100,000. each were made by the other four.

The McCall Ferry Power Company defaulted on its bond interest due December 15, 1908. Anticipating the inability of the company to meet its obligations, the holders of a large portion of the bonds outstanding asked the following to act as a Committee in the interests of holders of bonds and preferred stock:

Wm. M. Barnum
A. C. Bedford
S. R. Bertron
C. A. Coffin
G. M. Lane

Public announcement of the formation of this committee and the impending default was made to all bondholders on December 7, 1908 over the names of:

Harvey Fisk & Sons.
Lee, Higginson & Company
Bertron, Storrs and Griscom
H. F. Dimock
C. A. Coffin

With the announcement also went a request and agreement for the deposit with the committee of bonds and preferred stock. (See Exhibit #18) Sufficient bonds were deposited for the proposed committee to proceed with its reorganization plans. Wm. M. Barnum was elected chairman of the Committee and a plan was presented to the bondholders under date of May 28, [24517] (page 23) 1909. (See Exhibit #19). Hutchinson, Sanderson and Porter, and others attempted to prevent the deposit of bonds with this committee but, nevertheless, practically all of the bondholders deposited under the May 28th plan. All of the $8,325,000. of bonds outstanding except $66,000. principal amount were deposited with the Committee. The plan successfully culminated in the formation of the Pennsylvania Water & Power Company on January 13, 1910.

I believe the above is a fair statement of the deal and my firms position in it. It is wholly consistent with my recollection of the facts.

Pliny Fisk

Witness: January 25, 1939
Wilton D. Cole

EXHIBIT No. 396.

[24518]

EXHIBITS ATTACHED TO LEE, HIGGINSON & COMPANY PARTICIPATION

Exhibit No. 1 — Letter dated March 11, 1898, written by Stone & Webster to Messrs. Lee, Higginson & Company, setting forth results of independent investigation made of plans prepared by James H. Harlow for the development of the water power of the Susquehanna River between Peach Bottom and tide water.

Exhibit No. 2 — Same as Part 5 of Exhibit No. 27.

Exhibit No. 3 — Same as Part 7 of Exhibit No. 27.

Exhibit No. 4 — Same as Part 10 of Exhibit No. 27, with one additional page reading as follows:

> "Agreement of Subscribers to Bonds and Preferred Stock.
>
> "Lee, Higginson & Co. hereby assign and transfer to each person signing below all rights belonging to them by reason of their subscription under the Subscription Agreement, a copy of which is attached hereto, for the number of bonds and preferred shares opposite his signature.
>
> "And in consideration thereof each person signing below agrees with Lee, Higginson & Co. that with respect to the number of bonds and preferred shares set opposite his signature he will pay them the amounts of the subscription installments when and as they become due under said Subscription Agreement, and will save them harmless from liability under said Subscription Agreement."

Exhibit No. 5 — Same as Part 11 of Exhibit No. 27.

Exhibit No. 6 — Letter dated January 11, 1939, written by Lee, Higginson & Company to Pennsylvania Water & Power Company, "Attention Mr. James L. Rintoul, Vice-President", reading as follows:

"We duly receive your letter of December 27, 1938, asking us to make a search in the records we still have for any compensation in cash received by us in connection with the issue of McCall Ferry Power Company securities.

"This we have done and have been unable to find any such payments."

[24519] (page 2)

Exhibit No. 7 — Same as Part 20 of Exhibit No. 27.

Exhibit No. 8 — Includes (1) three photostats of McCall Ferry preferred stock certificates (No. 1, dated August 8, 1905, for 4,000 shares issued to Susquehanna Contracting Company; No. 216, dated November 7, 1908, for 200 shares issued to Electrical Securities Corporation; No. 217, dated November 7, 1908, for 3,800 shares issued to Susquehanna Contracting Company); (2) letter dated November 12, 1908, written by Harvey Fisk & Sons to J. W. Young, Vice President of McCall Ferry, transmitting "certificate #217 for 3,800 shares McCall Ferry Power Company Preferred Stock, n/o Susquehanna Contracting Company, properly endorsed in blank" and listing names of individuals and firms entitled to receive the 3,800 shares; (3) letter dated November 18, 1908, written by Harvey Fisk & Sons to C. H. Keep, President, Knickerbocker Trust Company, New York City, reading as follows:

"In connection with the certificates for 3,800 shares McCall Ferry Power Company preferred stock, standing in name of Susquehanna Contracting Com-

pany, which was recently sent you with the request that it be split up and issued in other names, we beg to assure you that this stock is part of an original issue and has since been held for account of those who have had a beneficial interest therein.

"We guarantee that no sale of this stock has ever been made."

Exhibit No. 9 — Letter dated February 27, 1908, written by Lee, Higginson & Company, stating, among other things; "We have asked Messrs. Stone & Webster to discontinue the examination of the property of the McCall Ferry Power Co. which was undertaken at our suggestion."

Exhibit No. 10 — Letter dated July 5, 1907, written by Bertron, Storrs & Griscom to Messrs. Lee, Higginson & Co., re additional financing required to complete the project. (Ex. No. 398)

Exhibit No. 11 — Note of Susquehanna Contracting Company to Lee, Higginson & Company covering $100,000 loan. Note included as a part of Part 40 of Exhibit No. 27.

Exhibit No. 12 — Schedule showing McCall Ferry deferred bond subscribers, etc.

[24521]

DRAFT OF
LEE, HIGGINSON & COMPANY PARTICIPATION
IN
McCALL FERRY POWER COMPANY

May 9, 1939

In August 1899, William F. Beyer, Geo. B. Willson and several others from Lancaster, Pennsylvania, formed the York Furnace Power Company, a partnership, and began acquiring land and water power rights for a low-head hydroelectric development near York Furnace on the Susquehanna River. According to Cary T. Hutchinson and Boyd Ehle, the original purpose for this hydroelectric power was the reduction of iron ore in that vicinity. However, one year later, the partnership group incorporated York Furnace Electric Company which immediately acquired pole line rights of way to Lancaster. Prior to the summer of 1901, Hutchinson was approached by the York Furnace partnership for consulting advice in connection with the reduction of local iron ore. He concluded that electrical reduction of this ore was not feasible.

During the summer of 1901, Hutchinson explored in his own interest, the hydroelectric power possibilities of the river and power markets, and finally concluded that a higher head development at McCall Ferry was most feasible. In October 1901, Hutchinson obtained an option on the property of the York Furnace partnership, which was successively extended until it was finally exercised by Hutchinson at the formation of McCall Ferry Power Company in 1905. The option was recorded and resulted in total payments by Hutchinson of $201,000. for the York Furnace properties. In February 1902, [24522] (page 2) Henry F. Dimock, Hutchinson's father-in-law, advanced funds to

Hutchinson for renewal of the option. Prior to this time, Hutchinson had used his own funds for the enterprise. After Hutchinson obtained the York Furnace option, Beyer appears to have acted in some respects as his agent.

James H. Harlow, George K. McGaw and others hereinafter referred to as Harlow-McGaw, principal competitors of Hutchinson for control of the river, first became interested in its hydroelectric possibilities in 1894. In July 1896, they made arrangements for the purchase of the Susquehanna and Tidewater Canals below Wrightsville, Pennsylvania. They made final payment and took title to the canals in March 1902. Between 1894 and 1902, Harlow-McGaw had been buying property and attempting to finance and to develop power from the river. One of those whom they attempted to interest in the financing was Lee, Higginson & Company. That firm employed Stone & Webster to make an independent investigation in 1898. Lee, Higginson & Company concluded that the proposition was not worth taking up at that time. Through ownership of the canals, Harlow-McGaw were able to effectively interfere with Hutchinson's plans. Bitter rivalry developed between Harlow-McGaw and Hutchinson, which adversely affected the prices each paid for property.

In April 1902, Harlow-McGaw attempted to perpetuate the canal rights by forming the Susquehanna Canal and Power Company. Hutchinson unsuccessfully opposed the formation of this company and bought property below his McCall Ferry site to interfere with the Harlow-McGaw plans for a development at Peach Bottom. In August 1902, Harlow-McGaw unsuccessfully opposed the formation by Hutchinson of two [24523] (page 3) water power companies.

In March 1903, Hutchinson caused a bill to be introduced in the Pennsylvania Legislature to revoke the canal charter. The bill seemed certain enough of passing that Harlow-McGaw, fearing the loss of all canal rights in Pennsylvania, entered into an agreement giving Hutchinson the

right to flood the canal above the McCall Ferry site. In consideration, Hutchinson agreed to furnish locks and navigation facilities. The bill in the legislature was then defeated. This agreement remained in force until the canals were purchased by McCall Company interests in 1905.

The right to flood the canal completed Hutchinson's control of substantially all the property required to develop power at McCall Ferry. Apparently, Hutchinson did not consider the spring of 1903 a favorable time to finance, and the enterprise seems to have remained dormant until late 1904 or early 1905. During 1903, Harlow-McGaw made an unsuccessful attempt to finance a development below the McCall Ferry site.

On January 13, 1905, Wm. Barclay Parsons submitted a favorable engineering report on the proposed McCall Ferry development. Bertron, Storrs & Griscom undertook to finance the development and issued a prospectus and underwriting agreement, dated March 1, 1905, naming Henry F. Dimock, S. Reading Bertron and Charles T. Barney syndicate managers. Under this plan of financing there were to be issued $8,000,000. par value bonds, and $4,000,000. par value each of preferred and common stock. Each $1,000. par value bond together with $500. par value preferred stock, was to yield $900. in cash. [24524] (page 4) The 40,000 shares of $100. par value common stock were to be divided equally between the Hutchinson interests and the bankers.

It appears that Lee, Higginson & Company participated in this underwriting as is evidenced by a letter from Gardiner M. Lane, a partner in that firm, dated March 10, 1905, to Robert Fleming, which contained the following points:

1. C. A. Coffin, President of General Electric Company, had brought the proposed development to the attention of Lee, Higginson & Company some time prior to the date of the letter.

2. Lee, Higginson & Company had given considerable time and attention to studying the proposed development and thought well of it, although a study of a water power project at a lower point on the river ten years previous, had been considered by them as not worth taking up at that time. (This had been a Harlow-McGaw project.)

3. Lee, Higginson & Company believed that there was no question whatever of there being a sufficient demand for the McCall power within a satisfactory distance at a profitable price.

4. The figures of the estimates were considered most conservative by Coffin and others. Coffin had given a good deal of attention to the figures.

5. Five per cent cumulative preferred stock in the amount of $4,000,000. was to go with the $8,000,000. of bonds to be underwritten and was to be profit to the Underwriters. The Syndicate Managers believed that they would be able to sell the bonds at the proper time without giving any of the preferred stock.

6. In addition to the issue of preferred stock, there would be an issue of common stock, all of which would be used in acquiring the rights from the promoters, who had been out a large sum of money for several years.

7. Lee, Higginson & Company proposed to take a block of the underwriting and hoped that Fleming would also take some.

8. Mr. Higginson thought highly of the undertaking.

[24525] (page 5)

Apparently about one-half of the necessary subscrip-

tions had been obtained under the Dimock-Bertron-Barney underwriting plan, when Bertron concluded that the proposition was more than his firm could complete. Of these subscriptions approximately $2,000,000. were secured by Lee, Higginson & Company, the remainder being evidently obtained by Coffin and Bertron, Storrs & Griscom. The latter, therefore, suggested that the matter be placed before Harvey Fisk & Sons and that that firm be asked to head a new syndicate. This probably occurred between March 10th and 25th, 1905. If the financing could not be completed, the Hutchinson interests were confronted with the prospects of an indefinite delay in securing release of funds expended on the enterprise during the previous four years, as well as the possibility of the interests on the lower river securing sufficient financing to construct their plant, and gaining the desirable markets for power. They chose the apparently safer course of securing immediate financing even though it entailed relinquishing control of the enterprise.

About March 15, 1905, Bertron approached Harvey Fisk & Sons to obtain their assistance in completing the financing. Harvey Fisk & Sons headed a new syndicate, with Bertron's firm as silent joint bankers. The new syndicate underwriting agreement of March 25, 1905 offered a 45% bonus of preferred stock to bond subscribers, but arrangements were made for subscribers under the March 1st agreement to receive the 50% bonus promised them. The issue of common stock was increased to 50,000 shares, of which the bankers were to receive 30,000 and the Hutchinson interests 20,000. This arrangement gave Harvey Fisk & Sons [24526] (page 6) control, and they subsequently managed the enterprise. The underwriting was obtained in the name of Susquehanna Power Company but this was later changed to McCall Ferry Power Company.

The 30,000 shares of common stock designated for the bankers were divided as follows:

Harvey Fisk & Sons	17,537½	shares
Bertron, Storrs & Griscom	7,462½	shares
Lee, Higginson & Company	5,000	shares
Total	30,000	shares.

The 20,000 shares of common stock designated for Hutchinson interests were divided beneficially as follows:

To Hutchinson and his associates	18,840	shares.
To Harlow-McGaw, et al	1,000	shares
To Chas. D. Pullen	150	shares
To Original Incorporators	10	shares
Total	20,000	shares

The subscriptions which Lee, Higginson & Company had obtained under the March 1st underwriting agreement had provided for a 50% bonus of preferred stock. On March 25th, a letter from Bertron, Storrs & Griscom to Lee, Higginson & Company, advising them of their commission in common stock for participating in the Harvey Fisk & Sons' underwriting, contained a proviso that Lee, Higginson & Company would receive an additional 5% of preferred stock over the 45% provided by the Underwriting Agreement of March 25th. That the 50% bonus was given Lee, Higginson & Company subscribers is further substantiated by the Stock Certificate Books and the stock lists later prepared from bonds turned in to the Reorganization Committee. It is assumed that Lee, Higginson & Company, having committed themselves to some subscribers on the basis of the March 1st plan, were given this means of keeping [24527] (page 7) those promises without incurring any additional expense on their part.

This letter of Bertron, Storrs & Griscom to Lee, Higginson & Company, dated March 25, 1905, contained the following language which related to the commission to be earned by the latter for securing underwritings:

"We agree that you shall receive through us or the Bankers, Messrs. Harvey Fisk & Sons, 25% of common stock on the Susquehanna Water Power Underwriting on $2,000,000. subscriptions to be furnished by you or $500,000. par value of the same, together with 5% of preferred stock, making the total amount of preferred stock 50% of the subscriptions instead of 45% as called for in this subscription. The same to be transferred to you as soon as issued."

This letter established the full compensation of Lee, Higginson & Company from the McCall underwritings, as subsequent events show that in spite of an additional allotment of bonds, their commission was never increased.

In a letter dated January 11, 1939, Lee, Higginson & Company stated that an examination of their records does not show that they received any cash compensation in connection with the issue of the McCall Ferry Power Company securities. In order to properly determine the cost of property and services acquired by the issuance of McCall Company common stock, it is necessary to establish the value of the stock. This must be done by some means other than market values as McCall Company failed before its stock reached the open market.

The McCall Ferry Power Company was incorporated on April 14, 1905, as a consolidation of Hillside and Susquehanna Water & Power Companies, which had been formed by Hutchinson on September 2, 1902. [24528] (page 8) The initial capital stock of the McCall Company consisted of ten shares of $100. par value each and was subsequently increased to 50,000 shares of common and a like number of shares of preferred stock of a par value of $100. each, resulting in a total capital stock of $10,000,000. Of this amount, the entire issue of common and $4,043,750. of the preferred were later issued to the public. A bond issue in the amount of $10,000,000. was authorized of which $8,325,000. were sold.

On April 18, 1905, Harlow-McGaw offered to sell to Harvey Fisk & Sons their holdings on the river. On April 27, 1905, an agreement of sale was executed between these parties which would convey all Harlow-McGaw holdings to Harvey Fisk & Sons for a consideration of $200,000. in cash, 250 McCall Ferry Power Company bonds, and 1,000 shares of common stock. The conveyance of property was subject to options held by Charles D. Pullen, which were subsequently acquired by Harvey Fisk & Sons for $10,000. in cash and 150 shares of common stock. The acquisition from Harlow-McGaw eliminated the necessity for carrying out the prior agreement for installation of canal locks and navigation facilities.

On June 12, 1905, the Susquehanna Contracting Company was incorporated by Harvey Fisk & Sons. On June 13, 1905, the Contracting Company entered into an agreement with the McCall Company, whereby the Contracting Company would convey all the properties, rights, etc., to be obtained from Harlow-McGaw, Hutchinson and others and furnish $6,400,000. in cash. In consideration, McCall Company was to issue $8,483,000. par value bonds; $4,116,500. par value preferred stock, and $4,999,000. par value common stock.

[24529] (page 9)

On June 14, 1905, Harvey Fisk & Sons assigned to the Contracting Company the agreement of April 27th with Harlow-McGaw for the acquisition of their property. On this date, Hutchinson executed an agreement with the Contracting Company, providing for the conveyance of all his property, rights, etc. In consideration, Hutchinson was to receive $750,000. in cash, 4,000 shares of McCall Company preferred stock, and 48,840 shares of common stock. This was the means of effecting the distribution of common stock already mentioned and providing the additional 5% preferred stock bonus for bond subscribers under the Dimock-Bertron-Barney underwriting agreement.

A substantial portion of those who received the additional bonus of 5% in preferred stock were Lee, Higginson & Company subscribers, as shown by the following list.

[24531] (page 11)

It has been stated heretofore that the Hutchinson Agreement was apparently used for the purpose of paying those who had promoted the undertaking and the Bankers and their Associates for financing and managing the Company. The preferred stock specified in the agreement appears to have been a partial exception.

When Fisk and Bertron were arranging the respective remuneration to go to each in the form of common stock, Bertron had required an additional five per cent in preferred stock for those who had previously subscribed under the Dimock-Bertron-Barney underwriting agreement of March 1, 1905. This was needed because of the decrease in the preferred bonus from 50%, as stated in the Bertron agreement, to the 45% stated in the Fisk agreement. The purpose was to retain the March 1st subscribers. Fisk was agreeable to this, provided his firm received a like amount of the preferred. Thus, the arrangement was made whereby each was to get 1,875 shares of preferred, Bertron's to maintain prior commitments, and Fisk's to serve as additional compensation.

Of the total consideration to Hutchinson, $750,000. cash and 18,840 shares of common stock went beneficially to Hutchinson interests. Hutchinson stated that he used the cash to reimburse, with interest, those who advanced funds to him, and about one-half of the 18,840 shares of common stock to meet other obligations he had created in furthering the project.

In addition to the Hutchinson agreement, Harvey Fisk & Sons also executed, on June 14, 1905, an agreement with the Contracting Company which provided that Harvey Fisk & Sons assign a [24532] (page 12) loan arrangement with Knickerbocker Trust Company and their rights and obligations under the bond and stock purchase agreements, except the right to repurchase the bonds. In consideration, the Contracting Company appointed Harvey Fisk & Sons its

agents to carry out its obligations under the bond and stock purchase agreements.

A loan arrangement with Knickerbocker Trust Company had been provided for in the Dimock-Bertron-Barney underwriting agreement. The Harvey Fisk & Sons' underwriting also provided for a loan arrangement which was made with the Knickerbocker Trust Company about May 15, 1905. Knickerbocker Trust Company was also trustee under the mortgage executed by McCall Company as of June 15, 1905.

On October 18, 1905, McCall Company entered into an agreement with Hugh L. Cooper for the management of hydraulic engineering and construction. Cooper actually began construction on October 24th. On October 25th, McCall Company entered into an agreement with Sanderson and Porter to superintend electrical construction and manage accounts.

A stock deposit plan, dated January 20, 1906, was put into effect with Bertron, Dimock, and Wm. M. Barnum of Harvey Fisk & Sons comprising the voting committee. Harvey Fisk & Sons controlled the McCall Company through this committee. The records of stock deposits were kept by Harvey Fisk & Sons and we believe they have been destroyed.

The plan of financing the McCall development provided that each subscriber would receive a 45 or 50 per cent bonus of preferred stock on the par value of bonds. There was a provision in the underwriting agreement whereby Harvey Fisk & Sons could repurchase [24533] (page 13) the bonds at 90 per cent of par, thus leaving the preferred stock bonus as a potential profit to the original subscribers.

Gardiner M. Lane actively represented Lee, Higginson & Company in the McCall enterprise. He was a director from August 8, 1905 to March 2, 1909 and a member of the Executive Committee from August 8 to September 20, 1905. It may be assumed that the inconvenience of Lane's attend-

ing weekly meetings in New York was the cause of his being replaced on this committee by Bertron, which would help insure a quorum being present to transact routine business. When matters of importance were passed on by this Committee, Lane was frequently present at the meetings which had been scheduled for his convenience. His resignation from the Committee, therefore, did not reduce his influence in matters of policy of the McCall Company. He was one of the five members of the Bondholders' Committee formed on December 7, 1908.

After the original financing, a change in plans for the development, to materially increase the capacity, required more money than was originally provided. Therefore, in June 1907, the question of disposing of the unissued bonds, amounting to a par value of $1,675,000. was considered with the idea of obtaining enough additional cash to complete the project. By early July, it seems to have been decided to sell $500,000. par of the bonds immediately, reserving the balance for sale about six months later. Lee, Higginson & Company, as one of the five largest stockholders, agreed to underwrite $100,000. of the half million and made plans to secure subscribers. By the time their plans were ready, the financial market appears to have [24534] (page 14) become unfavorable for raising money and the additional underwriting was suspended. The Knickerbocker Trust Company went into receivership in the fall of 1907, but arrangements were made for it to complete the loan to the Contracting Company, provided for in 1905. By midsummer of 1908, the cash available to the McCall Company was practically exhausted.

A resolution was passed by the Executive Committee of McCall Company in January 1908, at the request of Lane, authorizing the firm of Stone & Webster to make an investigation of the cost of completing the McCall project and the earnings which might be expected. After some work had been done, it became apparent that the investigation would be more expensive than had been anticipated

and the firm of Stone & Webster was asked to suspend its investigation. The expense of this investigation was presumably paid by Lee, Higginson & Company.

In July 1908, Lee, Higginson & Company, Harvey Fisk & Sons and General Electric Company authorized Electric Bond and Share Company to make an investigation of the cost to complete the McCall development. It was stipulated by the parties that the cost of this investigation should not exceed $10,000. and would be shared equally by each of the parties. The report was prepared by Albert S. Crane and J. D. Mortimer but Electric Bond & Share Company apparently did not think well of the proposition and no further action was taken by them.

The question was raised in July 1908 as to the possibility of using the unsold bonds to secure loans from directors or [24535] (page 15) others financially interested in keeping the company intact. It was contemplated that five $100,000. loans would be obtained, but for some unknown reason, the Hutchinson interests failed to make their loan. On October 28, 1908, loans of $100,000. were made by each of the following:

Harvey Fisk & Sons
Lee, Higginson & Company
Bertron, Storrs & Griscom
C. A. Coffin

These loans were secured by 702 McCall bonds, the Conowingo Land Company $25,000. mortgage, and the equity of the McCall Company in the $250,000. indemnity deposit with the Knickerbocker Trust Company for completion of the railroad relocation.

When the bond issue of McCall Company was originally offered, Lee, Higginson & Company apparently subscribed to $2,620,000. of bonds, of which the firm retained $500,000. The subscription was not made in the capacity of Bankers or Syndicate Managers but in the capacity of independent subscribers. Lee, Higginson & Company then,

in turn, obtained sub-underwriters on their own form of Underwriting Agreement. Thereby, the Lee, Higginson & Company subscribers were not responsible to Harvey Fisk & Sons but to Lee, Higginson & Company and the latter, in turn, was responsible to Harvey Fisk & Sons.

In November 1908, the Susquehanna Contracting Company was unable to repay its loans from the Knickerbocker Trust Company and the individual underwriters became personally liable for the Susquehanna Contracting Company loans on a prorated basis in accordance with the provisions of the Harvey Fisk & Sons' Underwriting Agreement of March 25, 1905. [24536] (page 16) By reason of this default by the Contracting Company, Lee, Higginson & Company became liable on account of $2,425,000. of bonds for which they had subscribed on the deferred plan, whereas Bertron, Storrs & Griscom, who were joint bankers with Harvey Fisk & Sons in the underwriting, were liable only for the subscription of their own firm. This indicates that, although Lee, Higginson & Company assisted in the sale of the bonds, they did not occupy the same status as the bankers and actually became guarantors for the subscriptions that they sold to others.

Arrangements were made for the Knickerbocker Trust Company to accept an additional 20% payment from all deferred subscribers and accept notes for the balance due for one year. In a list of these deferred subscribers, Lee, Higginson & Company is shown as liable for a balance due on $2,350,000. of bonds and as being guarantor on an additional amount of $75,000. The $195,000. other bonds subscribed by them were taken by non-deferred subscribers and had been paid for in full. It may be presumed that Lee, Higginson & Company, in turn, secured notes for the balance due them from their sub-underwriters to whom they had sold these bonds.

The McCall Company defaulted on its bond interest due December 15, 1908. Anticipating the inability of the company to meet its obligations, the holders of a large por-

tion of the bonds outstanding asked the following to act as a Committee in the interests of holders of bonds and preferred stock:

Wm. M. Barnum
A. C. Bedford
S. R. Bertron
C. A. Coffin
G. M. Lane

[24537] (page 17)

Public announcement of the formation of this committee and the impending default was made to all bondholders on December 7, 1908 over the names of:

Harvey Fisk & Sons — Bertron, Storrs & Griscom
Lee, Higginson & Company — H. F. Dimock
C. A. Coffin

With the announcement also went a request and agreement for the deposit with the committee of bonds and preferred stock. Sufficient bonds were deposited for the proposed committee to proceed with its reorganization plans.

The Bondholders' Committee immediately entered into a provisional agreement with J. E. Aldred for the new financing necessary to complete construction. On April 24, 1909, the Committee accepted a plan which Aldred had submitted for refinancing the enterprise. The McCall Company bonds were to be exchanged for securities in the reorganized company on a par basis of 40% bonds and 60% stock. The reorganized company was to use $4,170,000. of its bonds and $3,500,000. of its stock to raise $3,753,000. in cash. All except 66 of the 8,325 bonds of the McCall Company then outstanding, were exchanged for securities in the reorganized company.

On July 17, 1909, Aldred was appointed Receiver and continued in this capacity until after the formation of the Pennsylvania Water & Power Company. While acting as

Receiver, he also made expenditures on behalf of the Bondholders' Committee to further construction of the plant, the funds having been advanced by the syndicate furnishing the new money. Among the expenditures made by Aldred for the Committee were the purchases of the four $100,000. notes of the Susquehanna Contracting Company with interest at 6%. Three of the notes were purchased [24538] (page 18) on October 11, 1909 and the fourth which was made to Lee, Higginson & Company was purchased on October 15th.

Aldred had permitted the old McCall Company bondholders to subscribe to $500,000. par value of the new Pennsylvania Water & Power Company bonds in addition to those exchanged for McCall securities. Of this amount, Lee, Higginson & Company customers subscribed to $20,000., Frederick Ayer taking $19,000. and Robert Grant, $1,000.

On December 7, 1909, the Bondholders' Committee purchased the property of the McCall Company at foreclosure sale for $2,000,000. and on January 13, 1910 transferred this property to the Pennsylvania Company in exchange for that company's securities. The Pennsylvania Water & Power Company was formed on the same date, as a reorganization of McCall Ferry Power Company. Aldred was subsequently discharged as Receiver on March 18, 1910.

(Copied from Co. file #3222.48 — 9)

FILE P
September 9, 1912.

Mr. R. S. Kelsch, Consulting Engineer,
Power Building,
Montreal, Canada.

Dear Sir:—

* * *

We have gotten very satisfactory results from the flash boards which we installed on our dam.

We drilled a line of vertical holes 18" deep, spaced 2'—6" center to center along the crest of the dam, the dam having a length just short of one-half mile. In these holes were cemented pipe bushings to fit the flash board pins.

[24540] (page 2)

The flash board pins are of wrought iron, 6'—3" long, and project 4'—9" above the crest of the dam. The pins are 2-5/16" and 2-1/8" in diameter and are grooved circumferentially 1½" above the top of the pipe bushing in the dam crest. The diameter of the pins at the bottom of the groove is 2-1/8" for 1864 feet of the length of the dam, and 1-3/4" over the remaining 500 feet of the length of the dam. That is, there are 500 feet of pins which are weaker than the remainder.

The flash boards are of 1" undressed yellow pine timber, 12' long and over-cap 24" at each end. The boards are fastened together in sections 4'—6" high, and provided with wrought iron lifting handles.

The layout is so designed as to store water up to 4'6" above the crest of the dam. When the water rises to 5'3"

above the crest of the dam, the first section of weak pins falls and the water passes through the gap so formed. The diversion of the water through this gap, will, under ordinary conditions, draw down the pond and allow us to remove the remaining flash boards and pins.

In case the water rises so rapidly as to prevent this latter operation, the remainder of the pins will fall when the water elevation is 6′—0″ above the crest of the dam.

In case we want to work below the dam as we are doing just now, we reverse the pins bringing the grooved ends up, thus ensuring that the section along which the pins are reversed, will not fail until after all other pins have failed.

In order not to flood out certain properties about 8 miles up the river from us, we had to so design the flash board arrangement that flooding out of that property would not occur with a river stage represented by the quantity of water which would flow through the weak flash board pin gap section, plus the amount flowing through the power house, plus the amount flowing over the remaining flash boards up to a height at which the latter flash boards also would fall. We had, of course, to take into consideration the slope of the river at such a stage, and we had to be very particular in view of the fact that an injunction and lawsuit had been brought against us in connection with the flooding of the property up the river.

We made pretty exhaustive tests in connection with these flash boards, since we found that there were many things which entered into the problem, which made a priori calculation difficult. For instance, we found that if we did not notch the pins they would bend over very slowly and the slow bending would increase the bending strength of the pins and this, together with the variation in the water pressure on the pins, caused by the inclined position of the pins, and by leakage occasioned by cracks opening up between the boards during pin failure, resulted in requiring a considerably higher elevation of water to cause the boards to lie down flat; also, we found it necessary to test

samples of pins taken at random owing to the difficulty in obtaining a uniform grade of wrought iron. We experimented with cast iron pins, but the sudden giving way of such pins might cause trouble down river to men in row boats, owing to the flood wave.

[24541] (page 3)

We found it advisable to have the pins so arranged that they would give away slowly when the water reached a critical height, bending first about 9″ at the top. After having passed through this small angle slowly, we wanted the pins to then fall rapidly so as to insure that all of them would be forced down flat along the crest of the dam before the water level would drop too much and tne water level against the remaining pins be insufficient to force them also down flat.

When the water reaches the critical height above the dam crest, the wave action due to wind, causes a pounding against the flash boards so that the pins under such circumstances will start to bend before the critical water height is reached. We wanted the bending to be slight at first under such conditions, so as to avoid the unnecessary failure of the pins due to wave action and before the water has reached a critical height.

12″ upstream from the line of flash board pins we have placed pipe socket bushings in the concrete for a line of heavy pins, which might be called guard pins; these guard pins are used only in erecting or removing the flash boards. The guard pins are spaced 5′ center to center, and are of wrought iron 6′—3″ long and 2-5/16″ in diameter.

The flash boards are erected and removed from a scow, the scow resting against the guard pins, and when necessary the scow is anchored back to a series of cribs which we have placed upstream from the dam. The scow is moved along the dam, guard pins being removed at the stern as the scow passes along and jumped ahead and placed in

position at the bow. The scow is fitted up with a steam winch and is, in fact, especially arranged for this flash board work. Unless there is considerable water flowing over the dam crest, the guard pins are not used.

The men have been drilled so that it is not a long job for them to erect or remove the flash boards. Thirty men in five hours can set up the half mile of flash boards if the water is not more than one foot deep over the dam crest.

These flash boards have been of very great assistance to us during the low water season. We draw down the water behind the flash boards during the day and fill up the pond at night and on Sunday. Without these flash boards we would have been compelled to run considerable steam this Summer and so far we have not yet had to drop a bit of our load. We have telegraphic reports every day from up river, so that we can estimate the river flow. If too much water comes down we open up our #10 Headgates and by-pass the water until the freshet is passed. Several times we have had our pondage exhausted above the dam but we managed to hang on over Saturday and Sunday until a freshet of which we had advice could reach us.

It is very interesting to note the difference in time required for a large and a small freshet to travel down the river. The river is very wide and shallow so that a small freshet spends considerable of its volume in the long reaches of the river above us and sometimes the river will be actually falling North of us before we get the previous freshet.

[24542] (page 4)

* * *

Yours very truly,

CHIEF ENGINEER.

EXHIBIT No. 398.

[24543]

(Copied from McCall Ferry Power Co. file # 112)

Office of
LEE, HIGGINSON & CO.
44 State Street
Boston.

New York,
July 5, 1907

Messrs. Lee, Higginson & Co.
44 State St., Boston, Mass.

Gentlemen:

As you know, when we financed the McCall Ferry Power Company, it was financed for 50,000 Horse Power development. Subsequently it was found that a minimum of 75,000 H.P. could be developed with a small proportionate increase in cost, and this was approved by the Directors.

This decision necessitates therefore the sale of the remaining Treasury Bonds of the Company, namely, about $1,600,000. The Company has in its Treasury also the necessary amount of Preferred Stock to go with these Bonds, so that we can give the same amount as given on the original Underwriting, as a bonus. The Company will require these additional funds to begin to be paid in the next Fall. It will therefore be necessary to finance the Company to the extent of about $1,600,000 to complete the development. Probably half a million dollars will be all that they will need on this account until toward the close of the year.

With a view of putting the Company in funds in the Fall, it has been suggested by the President of the company that those of us interested in the Common Stock, should underwrite half a million of the Bonds on the old basis,

provided a Syndicate Loan were made on the original basis for six months or twelve months. I believe the five largest interests have agreed each to underwrite $100,000 on this basis, with the exception of yourselves. This will leave us about six months, or nearly so, to arrange for the last million.

We wanted very much to go over these matters with Mr. Lane and get his approval. Will you be kind enough to let us know your views in this matter. We will be glad to discuss it over the 'phone with you tomorrow forenoon, if you care to call us up tomorrow or Monday.

This Underwriting would not be pledged probably until Fall but it was thought wise to arrange for half a million speedily so that the company would know that it was available.

We hand you copy of data prepared by the Chief Engineer on the probable earnings from the McCall Ferry Power Company.

Very truly yours,

(S.) Bertron, Storrs & Griscom

Enclosure.
A. Data.

June 22nd, 1905.

Cary T. Hutchinson, Esq.
No. 60 Wall Street,
Manhattan, New York.

My dear Hutchinson:

I send you herewith original agreement Cary T. Hutchinson and Susquehanna Contracting Company dated the 14th day of June, 1905. Under the terms of this agreement you have already received the $750,000. therein provided, and you are still to receive $400,000. of the preferred stock and 48,840 shares of the par value of $4,884,000 of the common stock of McCall Ferry Power Company. The stock will probably be delivered to you about the first or second week of July.

I also send you receipt for $155,500. signed by Beyer, Willson and the Lancaster Trust Company and Franklin and Marshall College. Also certificates numbers 1, 2, 3, 4 and 5, each for two (2) shares of the capital stock of the McCall Ferry Power Company endorsed in blank. These represent the $1,000. in capital stock which you have received from Beyer and Willson.

Yours very truly,

(S) Lorenzo Semple

MOODY'S WEIGHTED AVERAGES OF YIELDS ON NEWLY ISSUED DOMESTIC BONDS

UNIT : PER CENT

Year	Industrial Bonds	Utility Bonds	Railroad Bonds
1945	2.98	2.85	3.22

Note: The above table shows the movement of the average Price of Capital for Industrial, Utility and Railroad Bonds. By "Price of Capital" is meant the average yield to maturity on newly issued bonds. The figures are weighted by the amounts of all new issues floated in any period.

Source of data: Moody's Bond Survey, February 18, 1946, page 630.

ESTIMATED LIQUID ASSET HOLDINGS OF BUSINESS AND INDIVIDUALS

1939 - 1946

(In Billions of Dollars)

	Dec. 1939	Dec. 1940	Dec. 1941	Dec. 1942	Dec. 1943	Dec. 1944	Dec. 1945	June 1946
Financial Corporations (3)							$ 4.8	$ 4.9
Non-Financial Corporations							41.3	38.4
Unincorporated Business							27.8	27.2
Total Business Holdings							73.9	70.5
Trust Funds (4)							16.5	17.0
Other Personal Holdings							130.8	135.0
Total Personal Holdings							147.3	152.0
Grand Total (1)							221.2	222.5
Made up as Follows:								
Currency							25.5	25.6
Demand Deposits (2)							60.3	62.9
Time Deposits							47.7	50.9
U.S. Gov't. Securities							87.7	83.1
Grand Total (1)							$221.2	$222.5

(1) Figures for banks, insurance companies, building and loan associations, nonprofit associations, and governmental bodies and agencies are not included in the totals shown.

(2) These figures are estimates of demand deposit balances as they would appear on the records of depositors. They differ from figures based on bank records such as given in regular banking statistics or in the Federal Reserve Survey of Ownership of Demand Deposits presented elsewhere in the Federal Reserve Bulletin. Depositor-record estimates are lower than bank-record estimates; for example, total demand deposits as of June 30, 1946, on a holder-record basis amount to 62.9 billion dollars while on a bank-record basis these deposits amount to 72.8 billion. This is because checks are constantly in the mail, i.e., deducted on payor's records and not yet added on payee's records, and because checks are constantly in the process of collection, i.e., added to payee's deposits as per bank records and not yet deducted from payor's deposits as per bank records.

(3) Includes real estate companies, finance and credit companies, insurance agencies (not carriers), investment trusts, security brokers and dealers, holding companies not otherwise classified, etc.

(4) Includes only amounts administered by corporate trustees.

FEDERAL POWER COMMISSION
DOCKET NO. IT-5915
PENNSYLVANIA WATER & POWER COMPANY

COST ALLOCATION

Nature of Study

This is a cost allocation based on data for the year 1946. The same principles employed in the allocation based on the data and costs for the year 1944 are employed.

Sources of Data

In this allocation, as in the 1944 allocation, the basic figures used for investment, rate base, fixed costs and operating costs were obtained from the commission Staff's accounting examiners. The engineering and operating data are from reports by Holtwood Company to the Commission. Additional information was furnished by Holtwood Company at the request of the staff.

Explanation of Study

This allocation, based on 1946 data and costs, involves the same six principle steps as did the allocation based on 1944 data and costs. The results are shown in the attached Tables I to VI as more fully explained herein.

(1) Table I

In this table, plant in service is classified according to items assigned directly to individual customers and items of jointly used facilities assigned to the pool for later allocation to all customers on the basis of use.

In this 1946 study, the assignment of facilities used for interchange service is made to Baltimore to accord with the assignment of the net revenue from such service. The Manor Switching Station is assigned 1/3 to the pool and 2/3 to Baltimore to accord with the assignment of the 220 kv lines.

(2) Table II

This table shows the derivation of the rate base, using the results of Table

Cost Allocation

(3) Table III

Table III shows the assignment of operating expense incurred in connection with the property items allocated in Table I to individual customers and the pool.

(4) Table IV

In this table, the total costs are assembled in conformity with the allocations in the preceding tables, Tables I to III.

(5) Table V

In this table, the costs of the jointly used property are classified into fixed and variable groups and finally into capacity and energy components. From the totals of the capacity and energy components, unit capacity and energy costs are developed. These unit costs are to be applied respectively to all of the capacity and energy supplied by Holtwood Company from its own resources.

The total cost of hydro production is classified at 75 percent to the capacity component and 25 percent to the energy component. The method of deriving these percentages for the 1946 study is the same as that used on the 1944 study.

(6) Table V-A

Table V-A is an analysis of Holtwood Company's generating capacity for 1946, made in a similar manner to that for 1944. The basic figure for load carrying capability of the hydro plants, based on minimum river flow and the actual loads during the peak week of 1946, is computed to be 167,000 kilowatts with weekly recovery of pondage. To this is added a total amount of 83,000 kilowatts, representing the estimated additional capacity value of the hydro plants, which it would appear reasonable for a company carrying the responsibility for maintaining continuous service to depend on as a reduction of its steam capacity requirements.

In estimating this additional capacity value, consideration has been given to its use for scheduled maintenance and to the use of Safe Harbor pondage for both sustained load and short period emergencies. To the total hydro capacity thus determined

Cost Allocation

is added the short time peak capacity of the Holtwood steam plant of 28,000 kilowatts giving a total dependable capacity of 278,000 kilowatts. After deduction for losses and station use, adjusted to the 278,000 kilowatt load, the net dependable capacity becomes 256,000 kilowatts.

The total dependable hydro capacity as determined in this 1946 study is divided between Holtwood and Safe Harbor on the same basis as it was divided in the 1944 study.

The determination of the balance of dependable capacity available for Baltimore in 1946 by the same method as was used in the 1944 study results in a deficit of 3,200 kilowatts to be supplied either by backfeed from Baltimore or from Baltimore's portion of Safe Harbor capacity.

(7) Table V-B

Table V-B is an analysis of the energy at Holtwood's disposal, both from its own resources and that supplied by Baltimore through backfeed and by diversion from Safe Harbor. In column 4, the amounts available for sale in Pennsylvania from these two sources are shown and column 5 shows the percent of each to the total. From these two sources the total firm and interchange power sales in Pennsylvania are supplied. Based upon the proportion of the available supply which each source contributes, firm power sales of 489,835,000 kilowatt hours and net interchange sales of 125,801,000 kilowatt hours are supplied from Holtwood's resources and firm power sales of 256,451,000 kilowatt hours from energy supplied by Baltimore.

This 256,451,000 kilowatt hours is the supply from Baltimore for which no costs are included in the amounts which have been allocated. Its cost, therefore, at Baltimore's average production cost of 4.7 mills is added to the cost of serving the Pennsylvania firm loads and allocated to each customer on the basis of energy use.

The delivery to Baltimore at Highlandtown of 376,684,000 kilowatt hours, plus the net interchange sales of 125,801,000 kilowatt hours supplied from Holtwood's resources, or a total of 502,485,000 kilowatt hours is charged to Baltimore at Holtwood's

Cost Allocation

average energy cost.

(8) Table VI

In Table VI, the costs previously allocated are assembled for each customer and for Baltimore in the same manner as in the 1944 study. Baltimore is then credited with the energy supplied through backfeed from its steam generation and by diversion from its share of the Safe Harbor output at its average production cost of 4.7 mills. Baltimore is also credited with the dependable capacity which it must stand ready to supply at a rate of $12.00 per kilowatt. This rate is not determined by any analysis of Baltimore's capacity cost or by any mathematical process, but is used as a reasonable component of the cost of supplying the firm power requirements in Pennsylvania.

The increase in the credit to Baltimore over that shown in Exhibit 64 is due in a small part to this credit for capacity, but mostly from the credit for energy delivered to Holtwood from Baltimore's portion of Safe Harbor.

This results in reducing the net cost of service supplied to Baltimore and correspondingly increases the amount of revenue in excess of allocated cost applicable to Baltimore.

Table III - a

RECONCILIATION OF OPERATING EXPENSE ALLOCATED IN TABLE III WITH EXPENSE REPORTED BY HOLTWOOD IN F.P.C. FORM 1

Operating Expense, 1944, as reported		$2,579,099
Revenue from Interchange Sales in Pennsylvania 1/		628,867
		$3,207,966
Susquehanna Capital Stock and Property Taxes	$ 65,060	
Susquehanna Depreciation	128,776	
		193,836 2/
		$3,014,130
Less Safe Harbor Bill as rendered		1,214,553
		1,799,577
Less Adjustment Credit to Admin. and Gen. Exp.		9,703
Less Credit Misc. Revenue		133,750
Balance of Operating Exp. Allocated on Table III		$1,656,124

1/ Revenue from interchange sales to customers in Pennsylvania is shown in the company's report as a credit to Operating Expenses. In this study the amount of these sales has been transferred to Revenue.

2/ Operating Expenses as reported contain the total costs of Susquehanna Transmission Company of Maryland, which include Taxes and Depreciation. These are taken out for separate handling and are combined with Taxes and Depreciation of Holtwood.

MEMORANDUM

Re: Lancaster Office Expense

The following memorandum is in reference to Mr. Newlands' inquiry concerning the duties assigned to the Lancaster Office in the early days of the Company, and the work carried on or supervised by the Lancaster Office at the present time.

Work carried out by and through the Lancaster Office, and a description of its mode of operation, are referred to in memorandums dated March 29, 1945 and May 23, 1945. These memorandums, together with a memorandum dated April 5, 1945 and supplement dated May 26, 1945, cover in general the reasons for establishing a Lancaster Office, and show in detail property purchases and similar plant additions required for the Holtwood Development made in whole or in part by that agency up to the year 1930. After 1930, all expenses of the Lancaster Office, with the exception of expenses charged to job orders, were charged to operation. Therefore, it is assumed that Mr. Newlands' question involves two elements namely: (1) what, if any, were the activities of the Lancaster Office other than those indicated in the various memorandums referred to above; (2) what is the present function of the Lancaster Office.

Referring to item (1) above, it is known that prior to 1930 Mr. Bushong was engaged at times in matters not directly associated with property purchases or plant additions so that, where the expense could be identified, it was eliminated from our origina' cost. These activities, insofar as our present knowledge is concerned, may be described by years as follows:

1912—None—(Mr. Bushong worked on per diem basis)
1913—None—(Mr. Bushong worked on per diem basis)

1914—None—(Mr. Bushong worked on per diem basis)
1915—None
1916—Represented Company at hearings involving rates to be charged on ferry at McCalls Ferry.
Attended legislative hearings on "Spangler Fishway Act."
Negotiated with National Transit Company for sale of pipe line right of way through York Furnace and Urey Farms.
1917—Checked titles to Susquehanna and Tidewater canal property.
Helped to organize guard force for Holtwood.
Helped to sell Liberty Bonds.
1918—Collected data on power requirements for Lancaster and York Furnace Street Railway Company.
1919—Further negotiations with National Transit Company for oil pipe line crossings near Holtwood.
Discussed with local residents proposed highway bridge across Susquehanna River in vicinity of Holtwood.
Negotiated with Pioneer Electric Light Company for service line extensions in vicinity of Holtwood.

[24774] (page 2)

1920—Further negotiations with National Transit Company.
Settled claim for flooding of public road in Lower Chanceford Township.
1921—Attended hearings held by Pennsylvania Public Service Commission.
Helped Pioneer Electric Light Company to extend distribution lines in Martic Township near Holtwood.
Distributed, to interested parties, panoramic views of Holtwood.

1922—Investigation of Martin Construction Company property rights and activities—Pequea.
Observation of activities of Pioneer Electric Light Company.
Arranged for public showing of motion pictures of Holtwood.
Distributed descriptive booklets and photographs of Holtwood Development.
Aided in defense of suit brought as a result of an automobile accident in vicinity of the York County end of the dam.
Investigated property titles in vicinity of Muddy Run—probably in connection with feed water supply for proposed Holtwood Steam Plant.
Checked up on extension of distribution lines by Pioneer Electric Light Company.

1923—Made report on financial condition of Lancaster County Railway & Light Company.
Assisted in matters pertaining to contract with Chester Valley Electric Company.

1924—Followed up matters pertaining to Conowingo Project.
Checked up on line extensions of Pioneer Electric Light Company.
Made proposal to Martic Township Supervisors for erection of new school near Holtwood.

1925—Followed up tax bills introduced in 1925 session of Pennsylvania Legislature.
Followed up Holtwood School matter.
Followed up progress of Conowingo Project.
Arranged for aerial survey of proposed transmission route to Philadelphia.

1926—Attended hearings before Public Service Commission in matters involving Philadelphia Electric Company.

Arranged meeting at Holtwood for residents of Lancaster and York Counties for discussion of proposed highway bridge near Holtwood.
Made reports on legislation introduced in extra session of Pennsylvania Legislature in reference to taxes and regulation of public utilities.
Followed up extension of distribution lines by Pioneer Electric Light Company.
Followed up Holtwood School matter.

[24775] (page 3)

1927—Helped to negotiate sale of Pioneer Electric Light Company to Lehigh Power Securities Company.
Followed up progress of Conowingo Project.
Reported on financial condition of Lancaster County Railway and Light Company.

1928—Completed arrangements for building of Holtwood School.
Attended conferences with Public Service Commission in connection with Series "B" Bonds.
Attended meetings held by residents of Lancaster and York counties in connection with proposed highway bridge near Holtwood.

1929—Arranged loan to Pequea Fuel Company.
Further activities in connection with proposed highway bridge near Holtwood.

GENERAL—Beginning about 1917, the Lancaster Office approved lease and license agreements covering use and occupancy of our property, and assisted at times in collection of rents and sale of buildings, although these matters were handled in the field by our Local Property Agent at Holtwood. The Lancaster Office was always aware of the local labor situation and assisted in obtaining labor for construction work at Holtwood and the recovery of river coal.

In the period between 1930 and the present time, the Lancaster Office acquired properties for the Safe Harbor Development and for the Westport and Riverside transmission lines, and carried out other duties of a general character. As noted above, all expenses of the office except those charged to job orders were charged as operation. It is somewhat difficult to give a complete picture of the duties assigned to the Lancaster Office at the present time as they vary to some extent with conditions, but the following list covers some of the specific items.

1. To advise the Baltimore Office of local conditions which might have an effect upon the Company's relationship with its employees or the public.
2. To make investigations of applicants for employment. Because of Mrs. Bushong's position in the community, her wide acquaintanceship, and her family and other connections this phase of the work is handled with accuracy and speed; the reports are reliable and useful.
3. Upon request, to recommend persons to fill specific jobs when there are openings.
4. To adjust, or to suggest methods to adjust, policies or procedures of the Company which may be objectionable to individuals or groups in the community.

[24776] (page 4)

5. To advise the Company when there is an opportunity to earn the commendation of its employees or neighbors by taking some action at little trouble or expense, such as (a) the preservation of some historical relic; (b) the removal of an unsightly building; (c) arranging for maps or other data to be furnished to public authorities in connection with road relocations or other matters; (d) removal, from Company owned property, of tenants who are objectionable to adjoining residents or property owners; (e) use of Company property by Boy Scout or other

groups for recreational purposes; (f) use of Company property by fishermen—in this connection it should be noted that a total of 10,639 fishermen were registered at Holtwood and Safe Harbor between August 15 and November 30, 1945.

6. To advise the Company in connection with the many requests for contributions received from charitable, welfare, or business associations. Because of the number of such requests, it is important to have someone familiar with local conditions to advise as to the desirable and undesirable requests, and the propriety of making contributions.
7. To assist in the dissemination of information designed to prevent shooting at insulators on transmission lines, to show the danger of flying kites near transmission lines, and to bring to public attention similar matters which are helpful in protecting the public and in maintaining service over our system.
8. To furnish information as to developments in local industry.
9. To assist in adjusting local tax matters and to advise of changes in assessments, tax rates, etc.
10. To assist in obtaining tenants for properties, particularly those located near Lancaster, and to help in getting workmen and materials for maintenance; to help in adjusting insurance claims; to help in rent collections.
11. To keep in touch with old and new stockholders living in Lancaster County so as to get the personal ideas and suggestions of a small cross-section of our shareholders.
12. To get data from courthouse records when required.
13. To maintain duplicate files of deeds and other real estate records so that copies of file documents are always available in Lancaster.

14. To furnish clerical and stenographic service to employees of the Company from Baltimore or other offices, when working in Lancaster.

[24777] (page 5)

It is to be understood that the preceding items are not intended to limit the work of the Lancaster Office, but rather to give some idea of the specific duties assigned to Mrs. Bushong. There are probably many other matters referred to the Lancaster Office from time to time by other departments, such as requests for information on specific subjects from libraries or newspaper files, and other non-recurring matters which it would be difficult to enumerate.

Docket IT-5915

PENNSYLVANIA WATER & POWER COMPANY

Sheet 1 of 2

SUMMARY OF LANDS AND RIPARIAN RIGHTS TRANSFERRED BY McCALL FERRY POWER COMPANY TO THE SUSQUEHANNA POWER COMPANY INTERESTS IN AUGUST 1908 SHOWING RELATIONSHIP TO TOTAL LANDS AND RIPARIAN RIGHTS ACQUIRED FROM THE HARLOW-McGAW INTERESTS UNDER AGREEMENT OF APRIL 27, 1905

Conowingo Parcel No.	Name of Property	Nature of Interest (1)	Approximate Acreage (Note 2) (2)	Acreage Transferred to Susq.Power Co. Interests (3)	Acreage Retained by McCall Ferry Power Co. (4)	Remarks
	A. TOTAL LANDS AND RIPARIAN RIGHTS ACQUIRED FROM THE HARLOW-McGAW INTERESTS UNDER AGREEMENT OF APRIL 27, 1905 (NOTE 1)					
	Proprietors of the Susquehanna Canal					
Various	Land and riparian rights (Length of canal about 9 miles)	Fee	152.48	152.48		McCall Co. interest represented by the entire outstanding stock of "Proprietors" acquired from Harlow-McGaw in 1905 and transferred to the Susq. Power Co. interests in 1908.
	Tidewater Canal

Docket IT-5915

PENNSYLVANIA WATER & POWER COMPANY

SUMMARY OF LANDS AND RIPARIAN RIGHTS TRANSFERRED BY McCALL FERRY POWER COMPANY TO THE SUSQUEHANNA POWER COMPANY INTERESTS IN AUGUST 1908 SHOWING RELATIONSHIP TO TOTAL LANDS AND RIPARIAN RIGHTS ACQUIRED FROM THE HARLOW-McGAW INTERESTS UNDER AGREEMENT OF APRIL 27, 1905

Conowingo Parcel No.	Name of Property	Nature of Interest (1)	Approximate Acreage (Note 2) (2)	Acreage Transferred to Susq. Power Co. Interests (3)	Acreage Retained by McCall Ferry Power Co. (4)	Remarks
	B. ADDITIONAL LANDS OWNED BY McCALL FERRY POWER COMPANY TRANSFERRED TO SUSQUEHANNA POWER INTERESTS IN AUGUST 1908					
	Sundry Tracts Acquired from Cary T. Hutchinson in June 1905					
Y-4	Levi Cooper	Fee	16.50	16.50		
Y-6	Charles S. Cooper	Fee	9.85	9.85		
Y-17	Ida B. McLaughlin	Fee	12.33	12.33		
Y-30	Rachel K. Robinson, et al.	Fee	18.08	18.08		
Y-33	Wm. T. Ramsey, et al.	Fee	0.15	0.15		
Y-34	S. D. and Emma E. Fry (God Cabin Tract)	Fee	9.27	9.27		
Y-45,48	Marcenas Craig	Fee	9.76	9.76		
I-18	White or Chestnut Island	Fee	15.18	15.18		
I-39	Mud Island	Fee	2.45	2.45		
	Sundry Additional Tracts					
I-26	Henry C. Demuth (Beach Island)	Fee	1.94	1.94		
L-38 to 41	Wm. A. Brown (Tracts 1, 2, 3, 4)	Fee	43.17	43.17		
L-48	Henry C. Demuth	Fee	5.16	5.16		
L-49	Mary I. Cutler	Fee	1.04	1.04		
L-54	Amer Kline	Fee	59.00	See "Remarks"		(McCall retained the fee on the entire acreage, transferring (flowage rights to the Susquehanna Power Co. interests on (the portion of the tract below Cullys Falls.

Note (1):
In addition to the listed properties, the McCall Co. also acquired from Harlow-McGaw the capital stock of several inactive companies, a release from the Tidewater and Susquehanna River Railroad regarding its proposed right of way (never acquired), and a release from the Conowingo Bridge Co. McCall Co. transferred all of these additional items to the Susquehanna Power Co. interests in 1908 with the exception of the stock of two of the inactive companies. These latter two companies have since been dissolved by Pennsylvania Water & Power Company.

Note (2):
The above acreages were taken from the F.P.C. staff accounting report on the actual legitimate original cost of the initial Conowingo project (Part II, Volume II, Schedule B), except for the property of Susquehanna Canal and Power Co. The acreage of the Susquehanna Canal is unknown, therefore, the approximate length in miles is given as furnished by R. L. Bortner, Assistant Secretary of Pennsylvania Water & Power Co. The acreages of Else Island and the Cunningham tract were taken from the Safe Harbor and Holtwood project map indices.

Docket IT 5915

PENNSYLVANIA WATER & POWER COMPANY

CALCULATION OF APPROXIMATE COST OF THE HARLOW-McGAW LANDS RETAINED BY McCALL FERRY POWER COMPANY AFTER THE SALE OF THE LANDS BELOW CULLY FALLS TO THE SUSQUEHANNA POWER COMPANY INTERESTS IN 1908.

Cash paid to Harlow-McGaw		$200,432
$250,000. McCall bonds at 90		225,000
Cash paid for Pullen options		10,022
Legal services, Note (1)		19,000
Expenses re: Susq. Power Co. condemnation suit		23,000
		477,454
Less land sold to Susq. Power Co. interests		
Proceeds of entire sale	$290,000	
Deduct portion of proceeds applied by Penn Water in its original cost study to properties acquired from other owners than Harlow-McGaw	13,370	
Net proceeds applicable to Harlow-McGaw lands		186,630
		290,824
Interest at 6% on expenditures to January 1, 1911 (less cessation period)		89,000
		$379,824

Note (1) Represents legal fees paid by Susquehanna Contracting Company to Simpson Thacher & Bartlett ($47,307), and Lorenzo Semple ($5,000) allocated to the Harlow-McGaw purchase in the ratio of the amount paid for these properties in 1905 ($435,000) to the total amount paid for the Harlow-McGaw and Hutchinson properties, ($1,185,000).

EXHIBIT NO. 454.

[24802]

June 25, 1924

Mr. M. E. Bushong, Real Est. Agent
636 Woolworth Building
Lancaster, Pa.

Dear Sir:

1. As indicated to you, I am asking you to assume the responsibility of following up the moves that are made in connection with the organization of the Holtwood Power Company, to the end that we may get our bonds issued at the earliest possible moment, get the legal matters and governmental applications and approvals in proper shape, and see that before Mr. Malone's departure arrangements are made with others to carry on the work as Mr. Malone has planned.

2. I am putting down hereunder my idea of some of the most important things to be attended to. I am not a lawyer and this list may not be complete, nor may it be correct, but since you are in constant touch with Mr. Malone I look to you, with this as a basis, to draw up your own list for your guidance and send me a copy thereof.

3. Organization of Holtwood Power Company:

Mr. Malone advises in his letter of June 18th that application for the charter of the Holtwood Power Company was filed June 16th with the Secretary of the Commonwealth.

4. Advertisements of intention have to be made in certain Journals a certain number of times. Please advise me of the names of the Journals and of the dates. I assume that the first advertisement was June 20th and that the subsequent advertisements would be June 27th, July 4th and July 11th.

5. At the expiration of the period of advertising the petition for charter, accompanied by affidavits as to advertisement, have to be filed with the Secretary of the Commonwealth, who, I assume, certifies same to the Public Service Commission, that all laws relative to incorporation, etc. of the proposed company have been complied with. I assume you will do your best to arrange in advance that such certification be forwarded by the Secretary of the Commonwealth with the least possible delay after his receipt thereof.

6. After having received endorsement of the Public Service Commission I assume that the papers are returned to the Secretary of the Commonwealth to be certified to the Governor. You have already taken steps in regard to doing the utmost possible to avoid delay in having these papers lay over, unsigned, on the Governor's desk and it is assumed that you will follow up this matter.

7. I assume that before the Public Service Commission can consider the application for charter, it must be presented with the application for certificate [24803] (page 2) of Public Convenience. Certain data required for the application was sent to Mr. Malone June 20th. I believe you have procured the information required to answer Section VI. You were given in New York certain (but not complete) information regarding our financing plans. I have been discussing the bond circular with Mr. Aldred and with Minsch, Monell & Co. today and we think it is in its final form, so that when I see you tomorrow afternoon I will give you further details of the financing plan. I do not know when the Certificate of Public Convenience has to be filed, nor whether it has to be advertised, nor what period of notification to the public or to public service companies interested, the Public Service Commission expects to give before it grants the hearing; nor when the hearing might be held; nor what length of time might be expected to elapse after the hearing before approval by the Public Service Commission; nor whether endorsements of consent on the

part of other Public Service Companies operating in Martic Township would facilitate matters before the Public Service Commission.

8. I assume that after the signing of the Letters Patent by the Governor they will have to be recorded in Lancaster and that only after that may the Company be considered as organized.

9. Then arrangements must be made for the increase of the capital stock, for the bond issue, and for the substitution of the new Board and Officers for the organizing Board and Officers. I assume that by that time you will require:

(a) The Deed of Trust.

(b) The financing agreement between Penna. W. & P. Co. and Holtwood Power Co.

(c) Application form to be presented to Public Service Commission for approval to enable P. W. & P. Co. to acquire all the stock (except Directors qualifying stock) of Holtwood Power Co.

(d) Certificate of notification filled out to be filed with Public Service Commission prior to the stock issue.

(e) Certificate of notification to be filed with Public Service Commission prior to issue of the bonds.

(f) Deed from P. W. & P. Co. to Holtwood Steam Company of site for steam plant.

(g) Certificates from Mr. Malone, Judge Stewart and Senator Reed's firm in connection with the Deed of Trust.

(h) Deed with plan accompanied by certificates of Counsel and engineer for release by Trustees of P. W. & P. Co.'s mortgages of steam plant site, together with minutes of P. W. & P. Co.'s Directors meeting.

10. I assume the above will be followed by a recording of the Deed of Trust in Lancaster.

11. Within thirty days from the issue of the securities, I assume you will be required to file with the Public Service Commission proper notifications that the security issues have been made.

12. I assume that Mr. Malone will draw, or have drawn, the appropriate Minutes of the Stockholders and Directors meetings of Holtwood Power Company and that you will provide for the necessary notarial signatures.

13. In connection with the above, as you know, we expect to make sale against the bonds when, as and if, before July 4th, and that interim trust certificates will be issued against the definitive bonds. The form of these certificates and the form of the bonds is to be worked up by Simpson, Thacher & Bartlett, and Mr. Allen in New York is to follow up this matter and to attend to the printing and engraving. I will ask Mr. Allen to send us the necessary data regarding the Minutes of the last meeting of the P. W. & P. Co. to give Mr. Malone. I am enclosing herewith a copy of the By-Laws of the P. W. & P. Co. to which it may be advisable to have the by-laws of the Holtwood Power Company conform.

14. In connection with the list of officers and directors sent you previously, we will wish to make an addition. The matter of who should sign the letter appearing in the bond circular was discussed, and though it is desirable to have the letter signed by the President, Mr. Clarke, yet the latter's absence in Europe makes this impossible, and it was not deemed advisable to try to secure his approval by cable. It did not seem desirable to have a letter signed by a Vice-President, so it was finally arranged that Mr. Aldred would sign as Chairman of the Boards of both Companies. We shall, therefore, wish to provide that the Holtwood Power Company elect Mr. Aldred as Chairman of its Board.

15. I assume you will let me know just what work Mr. Malone during his absence will wish to have carried out by Mr. Zimmermann, and what by Judge Stewart.

Yours very truly,

J. A. WALLS
Vice Prest. & Chief Engr.

JAW*R

EXHIBIT NO. 455

[24805]

Marvin E. Bushong
R.F.D. No. 4
Quarryville, Pa.

June 28, 1924.

Mr. J. A. Walls, Vice Prest. & Chief Engr.
Pennsylvania Water & Power Co.
Lexington Building
Baltimore, Maryland

Dear Sir:

In reply to your letter of June 25th I wish to submit the following tentative sketch subject to revision at your suggestion, and after having received Mr. Malone's suggested revision:

3. Has been covered and disposed of.

4. The advertisements have been placed and are now running in the following papers, viz: Law Review, June 20, June 27, and July 4. Lancaster New Era, June 27, July 4, and July 11. I am enclosing herewith a copy of each advertisement.

5. Mr. Malone has made arrangements for the certification to be forwarded by the Secretary of the Commonwealth to the Public Service Commission. I will follow this up and will have the proper affidavits prepared, signed, and filed as to advertisement.

6. Mr. Malone will leave a schedule to take care of this subject through Mr. Zimmerman.

7. The application for certificate of Public Convenience has been mailed to the Public Service Commissioners. The completion of this will be attended to by Mr. Zimmerman.

8. I will look after the recording of the charter in Lancaster.

9. In the matter of the permanent organization of the new Company, permit me to suggest that Mr. Rintoul have prepared a stock certificate book for the Holtwood Power Company, and that he provide the usual Pennsylvania stock transfer stamps and Federal Revenue Stamps to be used on the certificates when issued. Under the United States law we will be required to affix stamps in the amount of five cents per share of a par value of $100.00 on the original issue of stock of the Holtwood Power Company and two cents per $100.00 on each transfer. Under the Pennsylvania law we do not have to affix any stamps on original issue of stock but on each transfer after the original issue we are required to affix two cents for each share of a par value of $100.00. I would suggest that Mr. Rintoul have prepared a proper seal for the Holtwood Power Company. Mr. Malone is leaving a schedule with the minutes covering the increase of the capital stock, bond issue, and for the substitution of the new Board of Directors for the Holtwood Power Company.

(a) I assume that you will procure the Deed of Trust from the New York attorneys.

[24806] (page 2)

(b) I am assuming that the financing agreement between P.W. & P.Co. and Holtwood Power Company will come from the New York attorneys through you.

(c) The application form to be presented to Public Service Commission for approval to enable P.W. &P.Co. to acquire the stock of Holtwood Power Company will be prepared by Mr. Malone.

(d) The certificate of notification to be filed with the Public Service Commission prior to the stock issue should be filled out by Mr. Rintoul.

(e) The certificate of notification to be filed with the Public Service Commission prior to the issue of bonds should also be filled out by Mr. Rintoul. Both of these blanks are being obtained by Mr. Malone.

(f) Mr. Malone will prepare the deed from the P.W.& P.Co. to Holtwood Power Company for the site for the steam plant, data for which you are furnishing.

(g) Certificates from Mr. Malone and Judge Stewart in connection with the Deed of Trust will come from them without difficulty. Mr. Malone has already obtained the certificate from Senator Reed's offices as you know.

(h) The release by Trustees of the P.W.&P.Co's. mortgages of the steam plant site, together with the minutes of the P.W.&P.Co's Directors meeting should come from Simpson, Thacher & Bartlett.

10. I will see to the recording of the Deed of Trust in Lancaster as soon as it is adopted by the Board of Directors.

11. The notifications that the security issues have been made will have to be prepared by the Officers of the Holtwood Power Company, and I will see that they have the proper blanks and that the filing of these notifications is attended to.

12. The Minutes of Stockholders and Directors meetings mentioned under Paragraph 9, will cover the suggestions mentioned in Paragraph 12, with the exception of the notarial services which I will provide by having Miss Wiley of the Conestoga Traction Company in attendance at the meetings.

13. I have sent a copy of the By-Laws of the P.W.&P. Co. to Mr. Malone for his use in preparing a set of By-Laws for the Holtwood Power Company. The other matters under this paragraph will come from Simpson, Thacher & Bartlett through you.

[24807] (page 3)

14. The new Board of Directors will consist of the following:

	Officers of the Company	
Chairman of the Board	J. E. Aldred	40 Wall Street, New York
President	Chas. E. F. Clarke	40 Wall Street, New York
Vice President	J. A. Walls	Lewisburg, Pa.
Treasurer	Jas. L. Rintoul	1611 Lexington Building Baltimore, Md.
Secretary and	F. J. Allen	40 Wall Street, New York
Jos. W. Gross		1600 Walnut Street, Philadelphia, Pa.
M. E. Bushong		636 Woolworth Building, Lancaster, Pa.

This is in accordance with your verbal direction to me on Thursday, June 26th.

15. Mr. Malone and Mr. Zimmerman will go to Harrisburg and see the proper parties there in order to provide for an expeditious handling of certain legal matters there. There will, in all probability, be no necessity for a conference with Judge Stewart because Mr. Zimmerman will handle the work before the Public Service Commission and in the other offices in Harrisburg in Mr. Malone's absence.

Very truly yours,

(s) Marvin E. Bushong.

IN RE: DUTIES OF MEN EMPLOYED BY LANCASTER OFFICE

In the Flowage Basin Account (338) prior to 1930 there were charged certain amounts paid for services to men whose names do not appear on any other records. It is known that these men were employed by Mr. Bushong, presumably in connection with the purchase of properties, bridge or road relocations, or similar matters, but in only a few cases can the exact nature of their duties be set forth in detail. This matter is referred to in some detail on page 2 of memorandum dated March 29, 1945 entitled "Lancaster Office Expense."

In the early days of the Company, and to some extent until 1933, the responsibility for the defense of law suits, the acquisition of property, and other matters not of a technical nature, was held by Mr. Charles E. F. Clarke, vice-president from 1910 to 1914 and president from 1914 to 1933. When Mr. Bushong was employed by the Company he came under the supervision of Mr. Clarke, who was located in New York; for this reason, as well as for other reasons referred to elsewhere, many of the details of the work carried on by Mr. Bushong and his assistants are not clear to us today. However, during the time of the employment of the men under discussion Mr. Bushong was engaged in acquiring properties for the Company or in other construction work. It is known that some of these people were notaries and others justices of the peace, so that the services rendered may have been in their official capacities in acknowledging or witnessing options, contracts, deeds, etc. It is also probable that many of the payments for services were to persons who helped to prepare evidence, assisted in securing favorable witnesses, and

otherwise aided in defending the numerous law suits filed against the Company, resulting frequently in the purchase of the property involved.

The condition of Mr. Bushong's health, particularly after an attack of influenza in 1918, was such that he was not able to do much strenuous field work and it was necessary for him to have somewhat more help than would otherwise have been required. It is understood that he did not feel able at times to drive long distances, and it is definitely known that he frequently requested others to operate his car. It may therefore be assumed that some of the services rendered by these part time employees were in connection with transportation of Mr. Bushong or his agents engaged in the purchase of land or other negotiations.

It has previously been pointed out that it was, in many cases, advantageous to the Company to have properties purchased by agents who were not identified with the Company or Mr. Bushong. There was no attempt to hide the fact that Mr. Bushong was an employee of the Company, and the same agent could not be used in more than a few cases before his association with the Company would be evident; therefore, except in such cases as the purchase of properties in different localities, frequent changes in personnel were required.

The services performed by some of the men whose names appear in the 338 account are not known to us. However, in other cases the services performed are known, at least in part, and it is believed that the following list of duties is typical of all of the group:

[24809] (page 2)

E. R. Griel—acted as part time chauffeur in connection with flowage basin property and Lancaster Transmission line. Part of his time was charged to Holtwood Power Company.

G. S. Burkholder—operated a garage—took care of Mr. Bushong's car and acted as part time chauffeur.

E. D. Sensenig—for many years tax assessor in Martic Twp. Knew land values in Martic and Conestoga Townships and had personal contacts with many of the property owners. Probably supplied Mr. Bushong with information as to land values, ownership, sale prices, etc. Was definitely connected with purchase of rights from Lancaster and York Furnace Street Railway Company, and assisted in securing witnesses to testify for us in law suit in reference to flooding.

E. D. Barton—acted as part time chauffeur and probably assisted in making investigations.

M. H. Fritz—purchased Heine property (Hess House), now part of Conestoga Substation, and probably was connected with other similar purchases.

T. C. Evans—was notary public. In addition to work on flowage basin also acted as right of way agent on York, Coatesville, and Westport transmission lines. One of incorporators of Holtwood Power Company.

H. J. Taylor—assisted in acquisition of Harnish property at Shenks Ferry in 1920. Later duties (1927-1928) not known.

J. H. Wickersham—was contractor and builder—probably rendered service as an appraiser.

John Funk—kept a store in Washingtonboro and acted as a boatman on river. Was familiar with islands and purchased several for Safe Harbor development.

R. M. Sheeler—was a notary public.

J. S. Graybill—purchased Bleacher, Creamer, Kendig, and Miller properties (Manor Substation), also Lant property. Later purchased a number of properties for Safe Harbor development. One of incorporators of Holtwood Power Company.

J. C. Collins—at one time a notary public. Also worked as right of way agent on York, Lancaster, Westport,

Riverside, and Perryville transmission lines. Was one of incorporators of Holtwood Power Company, Safe Harbor Water Power Corporation, and Chanceford Water Power Corporation.

C. E. Todd—lived along river just below Holtwood, and investigated and supplied property information to Mr. Bushong. Was one of incorporators of Holtwood Power Company and also worked on York and Lancaster transmission lines. Was also a notary public.

[24810] (page 3)

A. Z. Zercher—posted notices and did other work in connection with construction of new Conestoga Township road and vacation of old road.

S. L. Kirk—part time chauffeur, and acted as messenger.

O. P. Bricker—attorney at law; services in connection with Washington Martin and Newton Rineer tracts.

Kersey Carrigan—purchased Hiemenz property in 1920. Also worked on York line (Violet Hill Substation), and is believed to have assisted in purchase of Geo. B. Willson properties on Conestoga Creek in 1927 and 1928. Was one of incorporators of Holtwood Power Company, Safe Harbor Water Power Corporation, and Chanceford Water Power Corporation. Also acquired some property for Safe Harbor development.

M. J. Brinton—part time chauffeur in connection with purchase of Heine, Hiemenz, and Harnish tracts at Shenks Ferry.

[24819]

EXCERPT FROM THE EIGHTEENTH ANNUAL REPORT OF THE PENNSYLVANIA WATER & POWER CO. FOR THE YEAR 1927

"When the steam station at Holtwood was constructed there was some doubt as to whether, under Pennsylvania law, a steam station could be owned and operated by a water power company. This matter has since been cleared up in the courts. The Pennsylvania Water & Power Company, which at that time had considered it prudent under the circumstances to organize a subsidiary, the Holtwood Power Company, has now gone through the necessary legal procedure and has purchased the assets of the Holtwood Power Company, merging that Company with itself, and assuming the $2,750,000 principal amount of Holtwood Power Company bonds outstanding. It is expected that a saving in interest charges will be possible by retiring these bonds in the near future, and issuing therefor lower interest bearing bonds of the Pennsylvania Water & Power Company." (P. 2)

EXHIBIT NO. 469.

[24828]

R. L. T.—EXHIBIT A.

(COPY OF PETITION OF PENNSYLVANIA WATER & POWER COMPANY AS SENT TO PUBLIC SERVICE COMMISSION OF PENNSYLVANIA BY MR. MALONE ON APRIL 21, 1932.)

BEFORE THE PUBLIC SERVICE COMMISSION OF THE COMMONWEALTH OF PENNSYLVANIA.

In Re: Application of the Pennsylvania Water & Power Company for a Certificate of Public Convenience evidencing the Commission's approval of the right to supply electric power and energy to The Pennsylvania Railroad Company in Manor Township, Lancaster County, Pa.	Application Docket No. 1932

TO THE PUBLIC SERVICE COMMISSION OF THE COMMONWEALTH OF PENNSYLVANIA:

The Petition of the Pennsylvania Water & Power Company,

Respectfully Represents:

* * *

[24831] (page 4)

* * *

5. Your petitioner desires to supply electric power and energy to The Pennsylvania Railroad Company in the Township of Manor, Lancaster County, Pa., a township in which your said petitioner has not heretofore supplied electric power and energy.

* * *

[24832] (page 5)

* * *

8. That the approval is necessary and proper for the service, accommodation and convenience of the public for the following reasons:

Your petitioner and the Consolidated Gas Electric Light and Power Company of Baltimore and the Safe Harbor Water Power Corporation, jointly as the "Electric Companies" have entered into an agreement with The Pennsylvania Railroad Company under which the Baltimore Company will sell to the Railroad Company in Maryland all of the power and energy required for the electrification of the Railroad Company's lines from the Susquehanna River to Washington, D. C. The same contract covers the supply of power and energy for the electrification of lines of the Railroad Company in the vicinity of Safe Harbor. It is expected that there will be two points of supply of such power and energy to the Railroad Company in Pennsylvania—Safe Harbor in Manor Township and Holtwood in Martic Township, Lancaster County. The bulk of power and energy thus supplied will originate in the Safe Harbor hydro plant, but some of it will be generated at the Holtwood hydro and steam plants and at times of low river flow the [24833] (page 6) supply of hydro energy will be supplemented by steam energy purchased from the Baltimore steam plants or from other sources. It is intended that the sale in Martic Township be made by your petitioner. It is desirable that the sale in Manor Township be made by either your petitioner or the Safe Harbor Water Power Corporation or by both, depending upon the actual conditions existing at the time, such as amount and division of load, economic source of supply, transmission facilities available, etc. Therefore your petitioner is asking for approval of the right to supply power and energy to The Pennsylvania Railroad Company in Manor Township and the Safe Harbor Water Power Corporation in a separate petition is also asking for approval of the same right.

[24841]

R. L. T.—EXHIBIT B.

March 3, 1937

Memorandum to Mr. H. A. Wagner
Mr. J. A. Walls

ARRANGEMENTS AMONG THE ALDRED COMPANIES WITH RESPECT TO PENNSYLVANIA RAILROAD ELECTRIFICATION EXTENSION

It has always been recognized that power delivered to the Pennsylvania Railroad in the state of Pennsylvania must be sold by a Pennsylvania corporation—i.e., one of the hydro companies. In 1931 a so-called "Working Agreement" was drafted and actually signed by Baltimore Company (dated November 25, 1931). It was then held in abeyance for a long time and finally dropped as unnecessary. (See Operating Committee's memorandum of December 12, 1934). As drafted in 1931, the proposed working agreement provided in Paragraph 7 that "all power and energy delivered to the Railroad Company in Pennsylvania will be sold to the Railroad Company by Holtwood Company."

It was later realized that on account of increasing gross receipts tax rates, a court decision upholding double or repeated gross receipts taxation in case of the sale and resale of power in Pennsylvania, and other reasons, it might some time prove to be desirable to have the Safe Harbor Company sell some of the power directly to the Pennsylvania Railroad. Hence in the orders obtained from the Public Service Commission of Pennsylvania dated January 10, 1933, issued over the protest of Pennsylvania Power & Light Company and upheld by the Superior Court of Pennsylvania, complete flexibility was secured in that permission was obtained for Safe Harbor Company to sell power directly to the Pennsylvania Railroad and for Holtwood Com-

pany to sell power to the Pennsylvania Railroad in Manor Township, in which the Conestoga Substation is located. (Holtwood Company of course already had the right to sell to the Railroad at Holtwood).

[24842] (page 2)

It is now necessary to decide how the sale will be handled.

As it would be too complicated to have Holtwood Company and Safe Harbor Company each sell power to the Pennsylvania Railroad, the two alternatives appear to be as follows:

PLAN 1—SALE BY HOLTWOOD COMPANY: Under this plan power and energy delivered to the Pennsylvania Railroad in Pennsylvania would be considered as sold to the Pennsylvania Railroad by Holtwood Company, and the revenue received therefor would be credited to Baltimore Company on the Holtwood-Baltimore bill under Paragraph (e) of Article III of the Supplemental Agreement, in exactly the same manner as sales to Lancaster, York and Coatesville. This is the plan which was contemplated at the time the so-called Working Agreement was drafted in 1931.

PLAN 2—SALE BY SAFE HARBOR COMPANY: Under this plan power and energy delivered to the Pennsylvania Railroad in Pennsylvania would be sold to the Pennsylvania Railroad by Safe Harbor Company. Baltimore Company and Holtwood Company would purchase the *balance* of the Safe Harbor output in the proportion of two-thirds and one-third respectively. In determining the payments to be made by Baltimore Company and Holtwood Company to Safe Harbor Company, the revenue received from the Pennsylvania Railroad for power and energy delivered in Pennsylvania would be deducted from the total Safe Harbor bill as computed under the three party contract as it

now stands, and Baltimore Company and Holtwood Company would pay to Safe Harbor Company the balance, in the proportion of two-thirds and one-third respectively.

COMPARISON OF THE TWO PLANS

We believe that Plan 1, sale by Holtwood Company, does not require any modification or supplementing of any contract unless and until Holtwood Company's one-third share of Safe Harbor output has to be increased in order to cover the sales to which Holtwood Company is committed. Under our method of accounting for energy, such increase will not be necessary, at least for many years, since the only requirement is that the annual energy supply available to Holtwood Company (Holtwood hydro, plus Holtwood steam, plus one-third of Safe Harbor hydro, plus energy purchased from Baltimore Company, Pennsylvania Power & Light Company, Philadelphia Electric Company and Metropolitan Edison Company) must be greater than the annual energy sold by Holtwood Company to the Pennsylvania customers, plus the annual energy delivered to Pennsylvania Railroad in [24843] (page 3) Pennsylvania, plus at least the greater part of energy delivered to Pennsylvania Railroad in Maryland (Perryville and Conowingo) over the Safe Harbor-Perryville line. The reason for including the latter item is that Holtwood Company's lawyers approved the ownership and operation of this line by Holtwood Company itself, without further authorization, only on the assumption that the line would be used to carry *Holtwood Company's* energy. An estimate for 1939 shows that even with a repetition of the minimum flow year of 1931, Holtwood Company would have an ample supply of energy on an annual basis.

We believe that Plan 2, sale by Safe Harbor Company, would require modification or supplementing of the three party Safe Harbor contract, for which prior filing with the Federal Power Commission and the Public Service Com-

mission of Pennsylvania is necessary, and would also cause complications in Safe Harbor billing. Furthermore, Safe Harbor Company at present has no arrangement whatever for purchasing steam generated energy which must be supplied to the Pennsylvania Railroad in low flow, and some sort of contractual arrangement covering this would have to be made and filed with the Federal Power Commission and the Pennsylvania Public Service Commission.

In addition to the making and filing of contractual changes, we believe that under Plan 2, it would be necessary to do a great deal of explaining to statistical companies, insurance companies, investors, the Securities and Exchange Commission, etc., because the statement has been made so frequently that Baltimore Company and Holtwood Company are purchasing or are "entitled to" the entire output of the initial Safe Harbor project.

The only advantage of Plan 2, sale by Safe Harbor Company, is a saving in Pennsylvania gross receipts tax, and this is not believed to be large enough to justify the contractual changes and complications. The tax on receipts from the Railroad Company is the same under both [24844] (page 4) plans, being paid by Holtwood Company under Plan 1 and by Safe Harbor Company under Plan 2. However the tax paid by Safe Harbor Company on receipts from Holtwood Company is less under Plan 2. Under that plan Safe Harbor Company's receipts from the Railroad Company would be deducted from the total gross revenue computed under the contract, and the *balance* would be divided between Baltimore Company and Holtwood Company in the proportion of two-thirds and one-third respectively. Hence Safe Harbor Company's receipts from Holtwood Company would be less under Plan 2 by one-third of the Pennsylvania portion of the total Railroad bill, and the gross receipts tax would be less by a corresponding amount. This amount cannot now be determined because neither the rate of taxation nor the allocation of the Railroad bill is

known. The twenty mill "emergency" rate (i.e., 2%) in effect in 1936 expired at the end of the year and, pending action by the 1937 Legislature, the rate is now the old one of eight mills. If the twenty mill rate is renewed and continued by the Legislature (as now seems likely for at least a two year period, since Governor Earle has made such a recommendation) the saving in tax under Plan 2 would be of the order of $13,000 in 1939. At the eight mill tax rate, the saving would be only about $5,300 in 1939. (These figures are based on revenue from the Pennsylvania Railroad of $2,000,000 for power and energy delivered in Pennsylvania).

It is an interesting fact that a similar saving in gross receipts tax could be effected by having Safe Harbor Company make the sales to other customers in Pennsylvania, as for example Pennsylvania Power & Light Company. Safe Harbor Company was made a party to all recent contracts with Pennsylvania customers partly to make that possible. Furthermore, in the case of Lancaster at least, such a set-up would be about as logical as in the case of the Railroad sale, because a considerable part of the energy going to Lancaster originates in the Safe Harbor power house and is stepped up by transformers owned by Safe [24845] (page 5) Harbor Company. Nevertheless the tax saving (equal in amount to the gross receipts tax on one-third of the revenue received from the Pennsylvania customers) has never been considered sufficient to justify contractual changes and complications resulting from direct sale by Safe Harbor Company.

RECOMMENDATIONS:

We recommend that Plan 1, sale by Holtwood Company, be followed under present conditions. However nothing should be done that will prevent changing to Plan 2 or some other equitable arrangement later if it should prove desirable. For example, if, as the result of action by

regulatory authorities or otherwise, the contractual set-up should be changed, it would be necessary to reconsider the method of allocating revenue received from the Pennsylvania Railroad, as well as other items covered by the contracts, in order to reach an equitable arrangement.

It is necessary of course to divide the total revenue received from Pennsylvania Railroad into two parts—Baltimore Company's revenue and Holtwood Company's revenue. It should be noted that the method of making this allocation will directly affect the *gross* revenue reported by Baltimore Company, but it will affect Holtwood Company's gross revenue only to the extent of changes in Holtwood Company's taxes. It will not have any effect on Holtwood Company's net revenue, and it will affect Baltimore Company's *net* revenue only to the extent that it changes the total combined taxes of the two companies. Under present tax laws only the Pennsylvania gross receipts tax and the Pennsylvania income tax paid by Holtwood Company are affected.

We recommend that under present conditions the *total* revenue (including charges for special facilities) be divided between Baltimore Company and Holtwood Company in proportion to the Kwh. delivered to the Pennsylvania Railroad in Maryland (including Benning Station in the District of Columbia) and Pennsylvania respectively. Under this method the average rates received for energy sold to the Pennsylvania Railroad [24846] (page 6) by the two companies will be the same. The rate received by Baltimore Company will be less than the present average rate, and the gross revenue for a given number of Kwh. will be less than it is now. This is shown by the following tabulation:

	Million Kwh.	$	Mills per Kwh.
1. Actual 1936 P. R. R. bill	114.8	1,192,857	10.39
2. 1939 bill without additional electrification (load—120% of 1936)	138.0*	1,350,600	9.8
3. Baltimore Company's portion of total 1939 bill with additional electrification under our proposal (total bill allocated in proportion to Kwh.)	161. *	1,188,000	7.38
4. Holtwood Company's portion of total 1939 bill under our proposal (total bill allocated in in proportion to Kwh.)	272.	2,006,000	7.38
5. Total 1939 bill with additional electrification	433.	3,194,000	7.38

* Item 3 is larger than Item 2 because power will be delivered to the Columbia & Port Deposit Branch at Conowingo in Maryland, and because traffic on the Perryville-Baltimore section will be increased by electric operation of freight between the west and Baltimore by way of Perryville.

EXHIBIT NO. 478.

[24861]

June 9, 1947

Mr. George W. Spaulding
Member of Operating Committee
Pennsylvania Water & Power Company
Lexington Building
Baltimore—3, Maryland.

Dear Mr. Spaulding:

We have given consideration to your letter of May 27 and the accompanying draft of a supplemental agreement with the Philadelphia Electric Company for the Coatesville area.

In Mr. Wm. Schmidt, Jr.'s letter to Mr. J. A. Walls, dated January 24, 1947, he stated that this Company would approve a renewal agreement with the Philadelphia Electric Company for one year from March 31, 1948 with certain modifications of the terms in the present agreement. We see no reason for departing from this position and will therefore be unwilling to approve the draft of the supplemental agreement.

When the power contract with the Metropolitan Edison Company was renewed in November 1945, you agreed with me that the reason for making Safe Harbor Water Power Corporation a party to the contracts with your Pennsylvania customers was the purpose of putting the Companies in a position to avoid the payment of double gross receipts taxes, but the Companies had never found it necessary to take any action with respect to this tax question, and it was therefore unnecessary to continue Safe Harbor as a party to the contracts. Accordingly, the agreement dated November 15, 1945 is between Holtwood Company only and Metropolitan Edison Company.

When any renewal agreements are made with Philadelphia Electric Company or Pennsylvania Power and Light

Company we will insist that Safe Harbor Water Power Corporation shall not be a party to them.

As fully explained in Mr. R. L. Thomas' testimony in your pending rate case before the Federal Power Commission, this Company's entitlement to two-thirds of the output of the Safe Harbor Plant under the 1931 Power Contract has not in any way been impaired by reason of Safe Harbor Water Power Corporation becoming a nominal party to the contracts with Pennsylvania Power and Light Company and Philadelphia Electric Company.

Yours very truly,

(Signed) R. T. GREER
R. T. Greer
Member of Operating Committee

EXHIBIT NO. 479.

[24873]

June 10, 1947

Mr. N. B. Higgins, President,
Safe Harbor Water Power Corporation,
Lexington Building,
Baltimore 1, Maryland.

Dear Mr. Higgins:

Prior to January 1, 1947, each monthly Management Report of the Safe Harbor Water Power Corporation has shown two-thirds of the kilowatt hour output of the Safe Harbor Plant as sold to this Company and one-third to Pennsylvania Water & Power Company. On June 3, 1947, we received Page 6 of the January and February Management Reports with a notation: "Please substitute the following *January* and *February* pages in your copy of the management report." Upon examining these pages, we find that the form of the page has been changed by adding under the Operating Revenue figures footnotes reading:

"(a)—Includes compensation in part for services supplied to P. R. R.

(b)—Includes compensation for services supplied Pennsylvania customers jointly with P. W. & P. Co.

(c)—Energy supplied P. W. & P. Co., P. P. & L. Co., P. E. Co., and P. R. R."

Furthermore, instead of showing two-thirds of the kilowatt hour output as sold to this Company and one-third sold to Pennsylvania Water & Power Company, other figures have been substituted.

We also find that these changes in the form and in the kilowatt hours sold have been made in the March and April Management Reports.

These changes have obviously been made at the instance of the Pennsylvania Water and Power Company in an attempt to support the contentions being made by that Company in its rate case now pending before the Federal Power Commission. As it should have been apparent that these changes were intended to be detrimental to our interests we are at a loss to understand why they were made.

We pointed out to the Federal Power Commission that the Pennsylvania Water & Power Company's contentions were not in accord with the facts in a statement filed with the Commission on December 26, 1946, entitled: "Statement of the Position of Consolidated Gas Electric Light and Power Company of Baltimore Regarding Sale of Safe Harbor Output." A copy of this statement was given counsel for Safe Harbor Water Power Corporation at the time it was filed and you have doubtless seen it, but we are enclosing a copy.

As the owner of two-thirds of the capital stock of Safe Harbor Water Power Corporation, we request that the erroneous statements in the Management Reports above mentioned be deleted and that proper statements be made in accordance with the uniform practice up to 1947. Page 6 of the January and February reports and the March and April reports are returned herewith for correction.

Yours very truly,

(Signed) Wm. Schmidt, Jr.
President.

EXHIBIT NO. 483.

[24925]

STATEMENT BY PENNSYLVANIA WATER & POWER COMPANY AND SAFE HARBOR WATER POWER CORPORATION GIVING HISTORICAL BACKGROUND FOR THEIR EXISTING POWER CONTRACTS WITH CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE

February 24, 1938

[24932] (page 6)

* * *

Safe Harbor Company sells one-third of its output to Holtwood Company at Safe Harbor in Pennsylvania and the balance to Baltimore Company at Baltimore and Takoma Park in Maryland.

* * *

[24934] (page 8)

* * *

Construction was started in October, 1905, and proceeded well until the fall of 1907, when the Company ran into financial difficulties in part connected with the failure of the Knickerbocker Trust Company, and stopped all work except that the tailrace cut was completed in the summer of 1908.

* * *

Mr. Aldred became Receiver on July 17, 1909. The Pennsylvania Water & Power Company was formed on January 13, 1910. His first problem [24935] (page 9) was to obtain the money with which to complete the initial project. Naturally it was difficult to get new money for a bankrupt venture. Also at that time construction projects and utilities were not looked upon favorably in the United States market. It was necessary for Mr. Aldred to obtain the bulk of the new capital in England and Canada.

In his reorganization Mr. Aldred endeavored to carry out the intention he originally stated to the bondholders' committee of squeezing the "water" out of the project capital. Whereas the balance sheet of the McCall Company showed a combined value of $18,186,482.29 for property, plant and equipment, and securities of other companies, the opening entry on the new company's books showed a value of $11,797,450.97 for property, plant and equipment, and securities of other companies. This was a reduction of $6,389,031.32, or 35%.

• • • •

[24939] (page 13)

• • • •

The development had been started without any contracts for disposal of the output. There were vague plans for selling power in Baltimore, Lancaster, Reading, Harrisburg, Wilmington, etc., and surveys for transmission lines to several points were actually made. However when the financial crisis of 1907 came the company had contracts for the sale only of less than one-third of the output of the proposed [24940] (page 14) initial project.

One of Mr. Aldred's problems in taking over the project was to find a market for the power. After extended negotiations, in August 1910 he obtained a ten year contract with the Baltimore Company. He later became interested in, and successively the President and the Chairman of the Board, of the Baltimore Company. In February, 1911 he closed a fifteen year contract with the United Railways & Electric Company of Baltimore. In these negotiations Mr. Aldred was handicapped by the fact that the reliability of hydroelectric power supply over high tension transmission lines had not yet been established and proper methods of coordinating hydro and steam resources had not been worked out.

Prospects

It may be remarked that your Company by the above arrangements, twenty-one years after its initial delivery of power to Baltimore from its Holtwood generating plant, is now entering upon a new stage of its development, one that has been carefully considered and planned for over a long period, which should result in very effective utilization of your Company's power resources and give an assurance of even greater stability than heretofore to your Company's earnings. The new contractual arrangement with the Consolidated Company covers a period of forty-eight years and constitutes virtually a guarantee of earnings on your Company's capital stock, since all the payments which the Consolidated Company is obligated to make to your Company are an operating expense of that company and thus come ahead of the dividends on its own preferred and common stock. * * *

NOTES

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY
ANNUAL REPORT 1941
(Excerpt)

TO CONSOLIDATED STATEMENT OF OPERATIONS AND BALANCE SHEET

Note A—Under contracts with Safe Harbor Water Power Corporation and Pennsylvania Water & Power Company to continue in force until April 22, 1980, whereby the Company purchases the entire electrical energy output of the plants now operated by those companies except such energy as is sold by those companies to other customers, the Company pays annual charges for the purchase of electrical power from those companies independent of the volume of energy received. The proceeds of all sales of power by those companies to other customers are deducted in determining the payments the Company is required to make. Pursuant to the Company's practice established in 1931, Operating Expenses have been adjusted through the Balance Sheet account "Hydro Equalization" to avoid variations in the costs of power from period to period due to variations in the usable flow of the Susquehanna River above or below averages computed from records for past periods. Beginning as of January 1, 1940, the Company amended its hydro equalization practice so that the debit in "Hydro Equalization" account as of December 31, 1939 and the debit or credit for each year thereafter resulting from below or above average usable river flow will be amortized to Operating Expenses over the immediately succeeding ten-year period.

Through such adjustments $1,107,166.23 in 1941, and $198,535.20 in 1940 were deducted from Operating Expenses and debited to "Hydro Equalization." The net of the adjustments of Operating Expenses which have been debited or credited to "Hydro Equalization" has been from 1931 to 1941, inclusive, a net debit, *i.e.*, a net deferment of Operating Expenses, of $2,562,976.43. An appropriation from Surplus in the amount of $500,000 was made in 1935 to reduce the then accumulated debit balance in "Hydro Equalization" account.

EXHIBIT NO. 493.

[25180] (page 10)

SAFE HARBOR WATER POWER CORPORATION ANNUAL REPORT 1933

* * *

It was considered desirable to put your Company in position to make delivery [25181] (page 11) of power directly to Pennsylvania Power & Light Company and to Philadelphia Electric Company with the consent of Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water & Power Company, without relieving the latter companies of their commitments above referred to. Therefore, during the year your Company as one of the parties, together with Pennsylvania Water & Power Company, entered into two power contracts; one with Pennsylvania Power & Light Company, effective May 1, 1933, to run until October 31, 1940, and the other with Philadelphia Electric Company, effective as of April 1, 1934, to continue in force until March 31, 1939.

[25183] (page 9)

PENNSYLVANIA WATER & POWER COMPANY

ANNUAL REPORT—1946

(Excerpt)

• • •

The development and duration of your Company's several power agreements appear in diagrammatic form on page 10. The electric services available from your Company's power development and as supplemented by electric services purchased from others are disposed of under five firm power contracts with the following customers: (1) Consolidated Gas Electric Light and Power Company of Baltimore; (2) Metropolitan Edison Company for system-wide power supply, including York; (3) Pennsylvania Power & Light Company for the Lancaster power supply; (4) Philadelphia Electric Company for the Coatesville power supply; and (5) The Pennsylvania Railroad Company for its electrified lines within the region. The services supplied to these several customers are supplied jointly by your Company and the Safe Harbor Water Power Corporation. Your Company also has certain interchange agreements providing for the interchange of electric services with others. Any savings from such interchange transactions, as and when operating economies can be effected, are not retained by your Company, but accrue to the benefit of Consolidated Gas Electric Light and Power Company of Baltimore under the terms of the power contract with that company.

REGISTRATION STATEMENT

(Excerpts)

FORM A-2 1933

* * *

The Company, under contracts with Safe Harbor Water Power Corporation and Pennsylvania Water & Power Company (mentioned in subdivisions 1 and 2 of Item 41) purchases the entire electrical energy output of the Safe Harbor Water Power Corporation's hydroelectric development on the Susquehanna River and the Holtwood hydroelectric and steam-electric plants of Pennsylvania Water & Power Company, except such electricity as may be required by the latter two companies in performance of other contracts or any legal obligation to serve, e. g., such as may be sold to Pennsylvania customers. The Safe Harbor and Holtwood plants are located about eight miles apart on the Susquehanna River, both within a radius of about forty-five miles of Baltimore. The present installed capacity of the Safe Harbor plant is 255,000 horsepower and the plant has been designed so that its capacity may be expanded. Additions to this plant now under construction and expected to be placed into operation about October 1, 1940 will increase the capacity by 42,500 horsepower. The plants of Pennsylvania Water & Power Company at Holtwood have a present installed capacity of 180,000 horsepower (150,000 hydroelectric and 30,000 steam-electric).

SAFE HARBOR WATER POWER CORPORATION

REGISTRATION STATEMENT

(Excerpts)

FORM S-1 1946

* * *

CERTAIN CONTRACTS

The electric services available from the Corporation's hydroelectric project are disposed of under four contracts, all of which consist of an original and one or more supplements and all hereinafter more fully referred to. These contracts are:

(1) Three-party Contract between the Corporation, Consolidated Company and Holtwood Company,

(2) Lancaster Power Supply Contract,

(3) Coatesville Power Supply Contract, and

(4) Pennsylvania Railroad Power Contract,

[25207] (page 25) the last three of which were entered into by the Corporation with the consent or approval of Holtwood Company and Consolidated Company.

The following statements are brief summaries for the most part in general terms of certain of the principal provisions of the aforementioned contracts and are in all respects subject to and are qualified in their entirety by express reference thereto.

(1) Three-Party Contract Between the Corporation, Consolidated Company and Holtwood Company

This contract consists of the original contract dated June 1, 1931 and two supplemental contracts hereinafter more fully designated.

Under the terms of these contracts Consolidated Company and Holtwood Company are presently entitled to two-thirds and one-third, respectively, of all the capacity, energy and other electric services avail-

able from the Corporation's hydroelectric development, other than any which may be required for the performance of any duty or obligation to serve imposed on the Corporation by its charter or otherwise by law and subject to the Corporation's responsibilities under its other contracts made with the consent or approval of Holtwood Company and Consolidated Company.

Consolidated Company and Holtwood Company make annual payments therefor in proportion to their entitlements as stated above (which payments are subject to increase or decrease by regulatory authorities) and which payments since 1937 have been the amounts required to yield to the Corporation a net income of 7% on its accumulated actual investment in its hydroelectric development (as defined in the contract) after "all reasonable operating expenses", and without regard to the amount of electric services actually furnished.

The Corporation is also obligated at the request of either Consolidated Company or Holtwood Company with the consent of the other to install additional machinery or equipment, and the requesting parties shall make the necessary additional annual payments therefor.

The contract also provides for abatement of the obligations of the respective parties for failures due to specified causes beyond the control of the parties, subject to the proviso that the payments shall not be reduced to less than enough for the Corporation to pay its bond interest and sinking fund charges over and above operating expenses (including allowance for depreciation).

Holtwood Company undertakes to transmit for Consolidated Company, Consolidated Company's share of the electric services available from the Corporation and is obligated in the event of its failure so to transmit Consolidated's share of such electric services to take

and pay for at the contract rate Consolidated Company's share of such electric services as well as its own. The contract likewise provides for the guaranty of the payment of the principal of and interest on the presently outstanding 4½% Series Bonds of the Corporation which it is intended shall be retired upon the completion of the present financing and which guaranty will not apply to the New Bonds to be issued and registered hereunder. These contracts continue in force until April 22, 1980. Copies of the contract dated June 1, 1931, Supplemental Contract dated August 1, 1932 and Supplemental Contract dated November 22, 1939 are filed with the Registration Statement as an Exhibit.

(2) Lancaster Power Supply Contract

This contract between the Corporation and Holtwood Company of the one part and the Pennsylvania Power & Light Company of the other part, provides for the delivery by the Corporation and Holtwood Company at Holtwood and near Safe Harbor, Pennsylvania, of the electric service requirements (as defined in the contract) of Pennsylvania Power & Light Company for distribution in its territory in and surrounding Lancaster, Pennsylvania, and for use in other parts of the system of Pennsylvania Power & Light Company (under conditions set forth in the contract) and the Corporation and Holtwood Company are to receive monthly payments from Pennsylvania Power & Light Company in respect to the several kinds of services rendered at specified rates. (See last paragraph under this main heading). This contract in addition to providing for firm power services also provides for the purchase and sale of electric services on an interchange basis. This contract by its terms continues in force until October 31, 1946 and thereafter for successive periods of two years each unless terminated by either party on eighteen months' written notice prior to the

expiration of any extension period thereto. At present this contract is effective to October 31, 1948.

Copies of the agreements constituting the Lancaster Power Supply Contract dated October 9, 1912, May 1, 1933, June 11, 1934, and Letter Agreements dated April 28, 1939, August 26, 1941 and October 14, 1941 are filed with the Registration Statement as an Exhibit.

(3) Coatesville Power Supply Contract

This contract between the Corporation and Holtwood Company of the one part and Philadelphia Electric Company of the other part, provides that the Corporation and Holtwood [25208] (page 26) Company are to deliver at Coatesville, Pennsylvania, the electric service requirements of the Philadelphia Electric Company for distribution in Coatesville and surrounding territory for which the Corporation and Holtwood Company are to receive monthly payments from Philadelphia Electric Company at specified rates. (See last paragraph under this main heading). This contract continues in force until March 31, 1948. Under the provisions of the contract Philadelphia Electric Company has given notice to the Corporation and Holtwood Company of its desire to terminate this contract on that date unless certain changes and modifications necessitated by conditions in the area supplied can be made in said agreement.

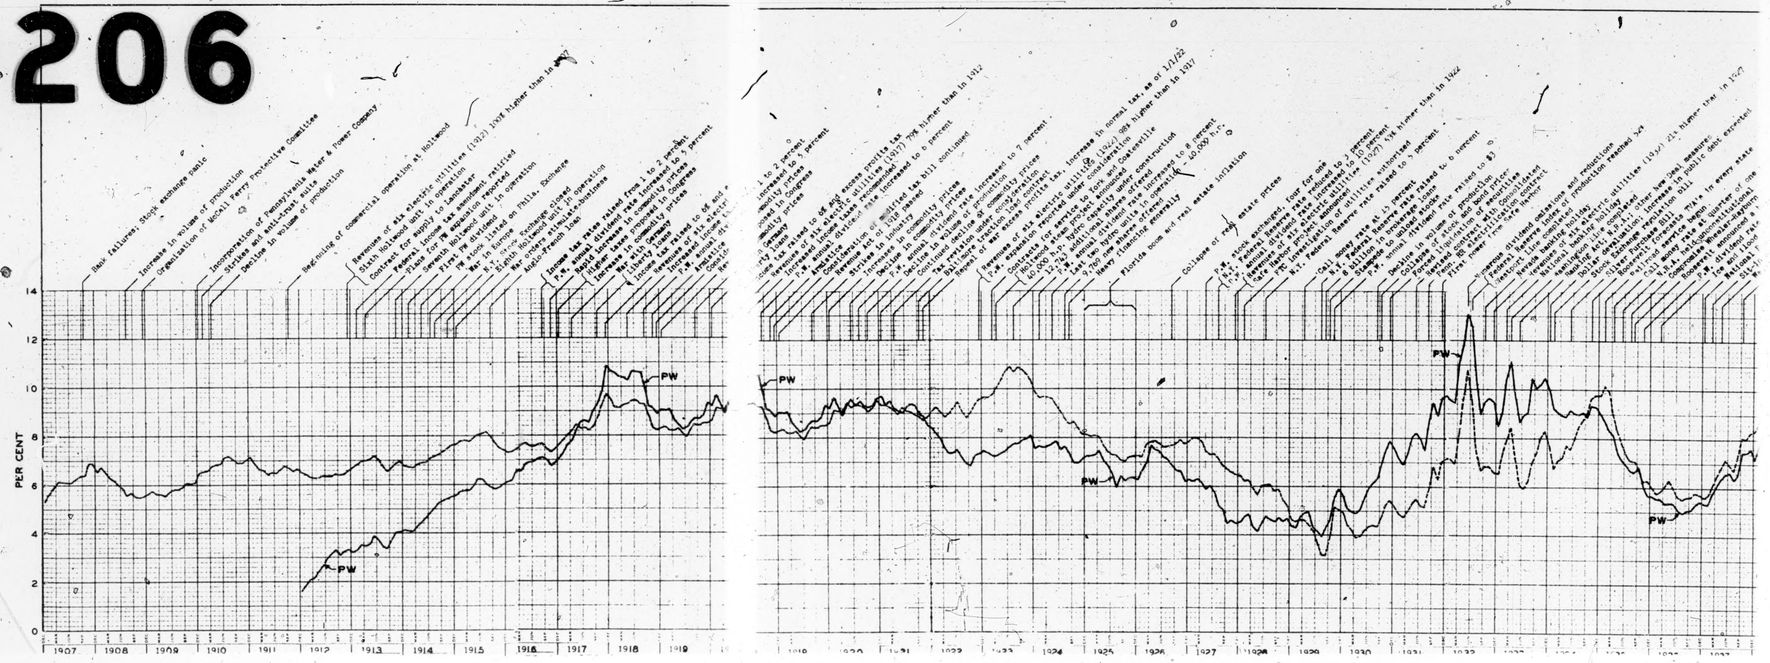
Copies of the agreements constituting this contract dated August 1, 1933 and December 13, 1938 are filed with the Registration Statement as an Exhibit.

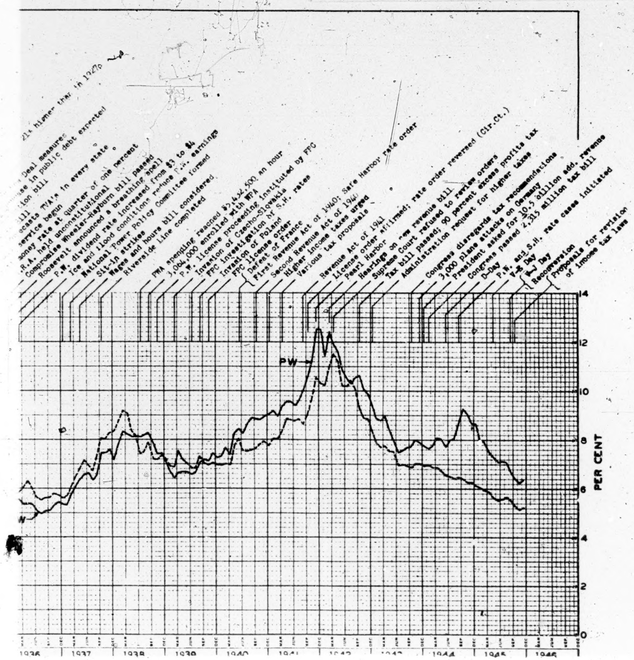
(4) Pennsylvania Railroad Power Contract

This contract between the Corporation, Consolidated Company, Potomac Electric Power Company and Holtwood Company of the one part and The Pennsylvania Railroad Company of the other part, provides that the Corporation, Holtwood Company and Con-

3206

ELECTRIC AND ELECTRIC COMBINATION UTILITY EARNINGS-PRICE RATIOS
MEAN OF MEDIAL FOUR OF SIX RATIOS
AND
PENNSYLVANIA WATER & POWER COMPANY





solidated Company as "Electric Companies", are to supply the entire electrification requirements of the Pennsylvania Railroad for passenger, freight and switching services on the main line of the Philadelphia, Baltimore and Washington Railroad from Perryville, Maryland to Washington, D. C., on the passenger and freight lines of the present Philadelphia Division between Thorndale, Pennsylvania and Harrisburg and Enola, Pennsylvania, on the Columbia and Port Deposit Railroad from Columbia, Pennsylvania to Perryville, Maryland, and yards adjacent thereto and supporting these services. The Railroad Company may also call for additional services on said lines and/or for passenger, freight, and switching services on additional lines in connection with extensions of Railroad Company's electrification and for installation of additional facilities.

To meet the requirements of these contracts special facilities consisting principally of two single phase hydroelectric generating units of 30,000 kw. each and a frequency changer unit of 25,000 kw. capacity were installed by the Corporation in its Safe Harbor Project. This contract continues in force until September 30, 1960.

Copies of the agreements constituting the Pennsylvania Railroad Power Contract dated September 2, 1931, August 15, 1934 and June 22, 1938, in composite form, are filed with the Registration Statement as an Exhibit, and a copy of the Railroad Parallel Operation Agreement between the Corporation, Consolidated Company, Holtwood Company, Philadelphia Electric Company and The Pennsylvania Railroad Company dated June 22, 1938 is filed with the Registration Statement as an Exhibit.

All of the foregoing power supply contracts are now the subject of review as to rates and services by public

regulatory bodies, as is more fully set forth under the heading "Material Litigation". For a description of the Federal Power Commission Order dated October 25, 1946 which was issued November 4, 1946 concerning the rates and charges of the Corporation, see "Material Litigation," subheading "Federal Power Commission."

The Corporation does not directly receive from the receiving Companies under the Lancaster, Coatesville and Railroad power supply contracts, any of the compensation for the joint services rendered under such contracts, but such revenues are received by its Agents, Holtwood Company (under the Lancaster and Coatesville Power Supply Contracts) and Consolidated Company (under the Pennsylvania Railroad Power Contract). All of the Corporation's revenues for services which it renders in connection with these contracts are received solely under the terms of the Three-Party Contract between the Corporation, Consolidated Company and Holtwood Company referred to in item (1) above.

EXHIBIT NO. 500.

[25210]

FEDERAL POWER COMMISSION
Washington

January 9, 1941

Consolidated Gas Electric Light and Power Company of Baltimore,
Lexington and Liberty Streets,
Baltimore, Maryland.

Attention: Mr. William Schmidt, Jr., Vice President.

Gentlemen:

Reference is made to the reports by your company on F. P. C. Form No. 169 and related data on F. P. C. Form No. 64 (1939).

The monthly reports on power requirements and supply, which the Commission is compiling pursuant to the request of the President, indicate that power loads are increasing rapidly in many sections of the country. It therefore becomes increasingly important to appraise more definitely the ability of each power supply system to meet increased power requirements.

In order that the available system capacity, of those systems with considerable hydro capacity, may be treated as a band with the lower limit reflecting conditions equivalent to the most adverse stream flow and the upper limit reflecting conditions equivalent to a year which would give the average annual potential output, the following supplemental information is requested:

1. Available kilowatt-hour output from system hydro plants by months under the following conditions:
   (a) Assuming flows equivalent to the year of most adverse stream flow.

(b) Assuming flows equivalent to a year which would give the average annual potential output.

2. Maximum portion of the peak load in kilowatts which could, on the present load shape, be carried each month by system hydro plants under conditions 1(a) and 1(b).

Data now at hand does not show, except in a few cases, the monthly variation in available system capacity of those systems whose capacity all (or nearly so) comes from fuel plants. In order to have more complete data on this subject, the following supplemental information is also requested:

[25211] (page 2)

1. Maximum continuous capacity in kilowatts available by months from system fuel plants making allowance for any outage which must be scheduled either for maintenance or other reasons. If different under conditions 1(a) and 1(b) of the preceding paragraph, give both.

2. Fuel plant capacity not normally available for service each month under conditions 1(a) or 1(b) of the preceding paragraph due to scheduled maintenance or other reasons. If the scheduling of maintenance is done in cooperation with other interconnected systems, please explain the relations.

It is desired that the supplemental data requested be furnished as soon as possible. The data submitted shall cover the pool operations of all the companies included in the current reports on Form No. 169. Your cooperation in this matter will be greatly appreciated.

Very truly yours,

(Signed) Leland Olds
Chairman.

[25212]

February 27, 1941.

Federal Power Commission,
Washington, D. C.

Attention of Mr. Leland Olds, Chairman.

Gentlemen:

In reply to your letter of January 9, 1941, we are submitting on the attached Tabulation I our understanding of the supplemental data requested covering the combined operations of the Holtwood, Safe Harbor, Baltimore, Bethlehem Steel and Washington Systems.

In reference to the data on hydro energy and capacity it is desired to especially call attention to the fact that it is not possible to select any one year which, as a whole, has the most adverse stream flow with respect to both available energy and capacity, as the Safe Harbor and Holtwood hydro plants do not have seasonal storage facilities. Therefore, both capacity and energy corresponding to the most adverse stream flow conditions for each month have been given in the attached Tabulation I, without regard to the year in which these conditions may have occurred. In many instances the years were different, with respect to the different months and in addition with respect to energy and capacity for the same month.

More specifically, the energy figures in Column 1 show the lowest available energy output for each calendar month, most of which are based on river flow records of different years. The kilowatts shown in Column 3 represent the difference between the maximum clock hour integrated load and the maximum kw. steam generation which would be required during each of these months based on estimated 1941 loads, present hydro facilities and the most adverse river flow with respect to capacity recorded for the respective months in the past 50 years. Floods are the controlling condition in March, April and May and low flows in the other months with normal weekly use of hydro stor-

age. The river flows used as the basis for the capacity shown in Column 3 are different in many months from those used as the basis for the energy shown in Column 1.

The figures shown in Column 4 have been derived in the same manner as those in Column 3, except that they are based on the average weekly energy, with normal weekly use of hydro storage, corresponding to the average potential monthly hydro output shown in Column 2.

It should be clearly recognized that there has never been a year when the river flow conditions were so severe as to result in the hydro capacity being reduced throughout the whole year to that shown in Column 3. The available hydro capacity for the greater part of the time is equal to or greater than that shown in Column 4 and the period of time during which the capacity approaches that shown in Column 3 is comparatively small. The "most adverse" river flows which [25213] (page 2) are the basis of the capacities in Column 3 have occurred but once in 50 years and not all in the same year. In the peak load season, November and December, the potential capacity with the present plants in nine out of ten years has been equal to or greater than that shown in Column 4 for that period of the year.

Also it is desired to point out that the figures in Column 3 have been derived on the basis used to determine the *limiting condition* for arranging maintenance schedules. The present practice, in general, is to allow capacity equivalent to the largest unit for operating spare (now 48,000 kw.) plus the small standby plant at Westminster, Maryland, and to rely upon hydro storage for additional reserve (the usable hydro storage will provide for slightly more than the loss of the largest unit on the system for a week, which in itself is believed to be a severe assumption). These monthly hydro capacity figures are *not* on the same basis as that which is used to determine requirements for capacity installation and which is reported on FPC Form 64 in connection with the annual peak. The latter figure

is determined by including use of hydro storage over a 20-day period based on the very conservative assumption of the simultaneous loss of capacity equal to that of the two largest units for the entire 20-day period.

In reference to the fuel plant capacities it will be noted that in certain months the capacity shown in Column 7, as not normally available under "most adverse stream flow" conditions, is less than the corresponding capacity shown in Column 8 for "average output" conditions. The difference is due to certain maintenance outages scheduled for normal river conditions being subject to deferment to other more favorable periods in the same year or succeeding year dependent upon the actual or immediately prospective river conditions. The capacity figures in Columns 7 and 8 also show, in addition to scheduled maintenance outage, capacity unavailable due to other causes such as allowance for certain unscheduled maintenance outages of boilers and gas-electric engines which are required at frequent periods, inability of available boilers to sustain rated output of the plant for a continuous period, and condenser water limitations. A portion of this capacity is available for carrying peak loads of short duration (i. e., one hour or less).

To further clarify the use of the attached capacity data we are submitting Tabulation II which shows for both "average" and "most adverse" river conditions the application of these figures in Schedule 16, FPC Form 64 or Schedule 3, FPC Form 169 (1941) to determine "net assured" capacity for operating purposes.

Yours very truly,

(Signed) F. E. Ricketts
Vice-President.

EXHIBIT NO. 501.

[25216]

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE

February 10, 1942

Mr. A. J. Kohler, Associate Engineer,
Federal Power Commission,
1735 Baltimore Trust Building;
Baltimore, Maryland.

Dear Mr. Kohler:

Confirming our conversation in your office, I wish to supply the following description of the changes we wish to propose in the load and generation data supplied to the Commission.

In July of 1941 our system load records were changed from a delivered or net basis to the basis of main unit output. With the growth of system loads, larger steam units and more transmission lines, it afforded considerable advantages in system operation and simplicity of records to include transmission losses and generating station use as part of the system requirements to be provided for. Because of the magnitude of the system load, it was no longer considered practicable to record hourly load data to less than whole megawatts. Operating capacity figures are also reported to even megawatts and show capability of main generators without deductions for station use or transmission losses.

As a result of the change in our load and capacity records it has been necessary in our reports to the Commission, since July 1941, to convert all of our generating records over to the basis provided by the forms. It is felt that a better picture of the relationship of our system load and capacity can be obtained directly from the operating rec-

ords. Accordingly, we have selected the month of December 1941 for example and prepared a copy of Form No. 169 on the proposed basis.

The only change from the original report which has been made in Schedules 1 and 2 is to include the transmission losses and generating station uses.

A comparison of the capacity figures shown in Figure 3 of the proposed report with those reported on the form actually submitted is shown below:

	Proposed Form	Net Basis Used for December, 1941
1-a. Net Dependable Capacity Available from system fuel plants:		
Westport	266,000	240,000
Gould St.	71,000	67,000
Pratt St.	18,000	18,000
Westminster	1,000	1,450
Benning	175,000	171,000
Buzzard Point	120,000	115,000
Bethlehem Steel Co.	46,000	45,000
Holtwood	26,000	24,000
Total	723,000	681,450

[25217] (page 2)

1-b. Net Dependable Capacity Available from system hydro plants	265,000	253,000
2- Reserve Capacity Required		
Largest Baltimore Unit	59,000	50,000
Largest Washington Unit	50,000	48,000
Westminster (Cold Reserve)	1,000	1,450
Total	110,000	99,450

The change of 26,000 kw. in the capacity of Westport is due to 6,000 kw. station use supplied from the main bus and 20,000 kw. additional capability which was demonstrated during the sustained low flow periods of 1941. The change of 4,000 kw. in Gould St. capacity is due to 3,000 kw. station use supplied from the main bus and 1,000 kw. additional capability.

The Pratt St. capacity is the metered output of the generating unit as no facilities are provided for station use metering at this plant.

The Westminster capacity has been reduced to the nearest whole megawatt.

The capacities shown for the Buzzard and Benning stations are the capacities furnished by the Potomac Electric Power Company adjusted for station use.

The difference in the figures for Bethlehem Steel Company's capacity represents the estimated station use which was deducted in previous reports.

The difference of 2,000 kw. shown for the Holtwood Steam plant represents the combination of station use and transmission losses. This is likewise true as regards the difference of 12,000 kw. shown in the dependable capacity of the system hydro plants.

The difference in the reserve capacity required was caused by the increased capability demonstrated by No. 2 unit at Westport, the largest Baltimore steam unit, the change from net to gross capacity of the Buzzard unit, and the revised rating of the Westminster plant to the nearest whole megawatt.

From a comparison of the proposed form with the report submitted for December 1941, it may be seen that the effect of these changes has been to increase the peak load shown in Schedule 2 for December 1942 by 37,000 kw., while the net assured system capacity, Line 6, Schedule 3, has been changed by 43,000 kw. This represents a net gain to the system of only 6,000 kw. of generating capacity from the proposed revision in the basis of reporting. It should

be noted that the capacities given in the revised report are based on average winter circulating water conditions which prevail at time of the present annual peak load. For circulating water temperatures higher than those estimated for the present annual peak period the capacity of the fuel burning plants will be reduced appreciably.

[25218] (page 3)

The adoption of this proposed method will not only give a more accurate report of the system load and capacity relations, but will eliminate the necessity of obtaining hourly readings of station use and keeping duplicate records of system load, now required only for the purpose of reports to the Commission.

Very truly yours,

(Signed) R. T. Greer
R. T. Greer, Director,
Intersystem Power Utilization Bureau

RTG:JC

This report was discussed with Mr. Penniman in his office on February 11, 1942 and he approved giving this information to the Commission.

(Signed) R. T. G.

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE

ANNUAL REPORT TO SEC

Form 10-K 1941

NOTES APPLICABLE TO STATEMENT OF OPERATIONS

Note 1

Under contracts with Safe Harbor Water Power Corporation and Pennsylvania Water & Power Company to continue in force until April 22, 1980, whereby the Company purchases the entire electrical energy output of the plants now operated by those companies except such energy as is sold by those companies to other customers, the Company pays annual charges for the purchase of electrical power from those companies independent of the volume of energy received. The proceeds of all sales of power by those companies to other customers are deducted in determining the payments the Company is required to make.

Notes

(a) Cost of Capacity for Pennsylvania Customers and PRR in Pa.

64.74 % of the cost of capacity (line 26, Table V) from "Holtwood Reserves" 64.74% x $2897,112 = $1875590

47,473 kw "Diversion from Baltimore's 2/3 of Safe Harbor" 47,493 kw x $14.27 = 677.725

Total cost distributed to the Pennsylvania Customers in proportion to max. demands $2553315

(b) Cost of Energy for Pennsylvania Customers and PRR in Pa.

65.69 % from "Holtwood Reserves", at cost of 1.30 mills/kwh = 0.853

7.02 % from Conowingo, at assumed cost of 4.70 0.800

27.34 % by "Diversion from Baltimore's 2/3 of Safe Harbor" at cost of 0.867 0.150

Weighted average unit cost applied to Pa. Customers from energy mills/kwh = 1.803

(c) Cost of Capacity

35.26 % of the cost of capacity (line 26, Table V) from "Holtwood Reserves" 35.26% x $2897112 = $1021522

(d) Cost of Energy for Baltimore

502,485,000 kwh (line 15, col 11, Table V-B) at 13 mills/kwh = $652919

(e) Credits to Baltimore

for backfeed 127.031.000 kwh (Sch X) at 4.7 mills/kwh = $597.046

for energy "Diverted from Baltimore's 2/3 of Safe Harbor" 194260000 kwh (Sch X) at 0.867 mills/kwh = 112207

Subtotal - energy credits $709.253

for capacity "Diverted from Baltimore's 2/3 of Safe Harbor" 47.493 kw (Sch Y) at $14.27/kw = 677.725

Total credits $1,386778

RELATIONS OF (1) HOLTWOOD HYDRO GENERATION, (2) 25 CYCLE DELIVERY TO HIGH LAND TOWN AND (3) P.W. & S.H. TRANSM. LOSSES AND STATION USES TO TOTAL P.W. & S.H HYDRO GENERATION, FOR THE HOURS OF SYSTEM PEAK LOAD (AREA G + PA. CUST.) ON ALL DAYS OF 1945 & 1946 EXCEPT SAT., SUN & HOL. AND THOSE DAYS ON WHICH HYDRO UNITS (AT HOLT OR S.H.) WERE OUT OF SERVICE FOR MAINTENANCE

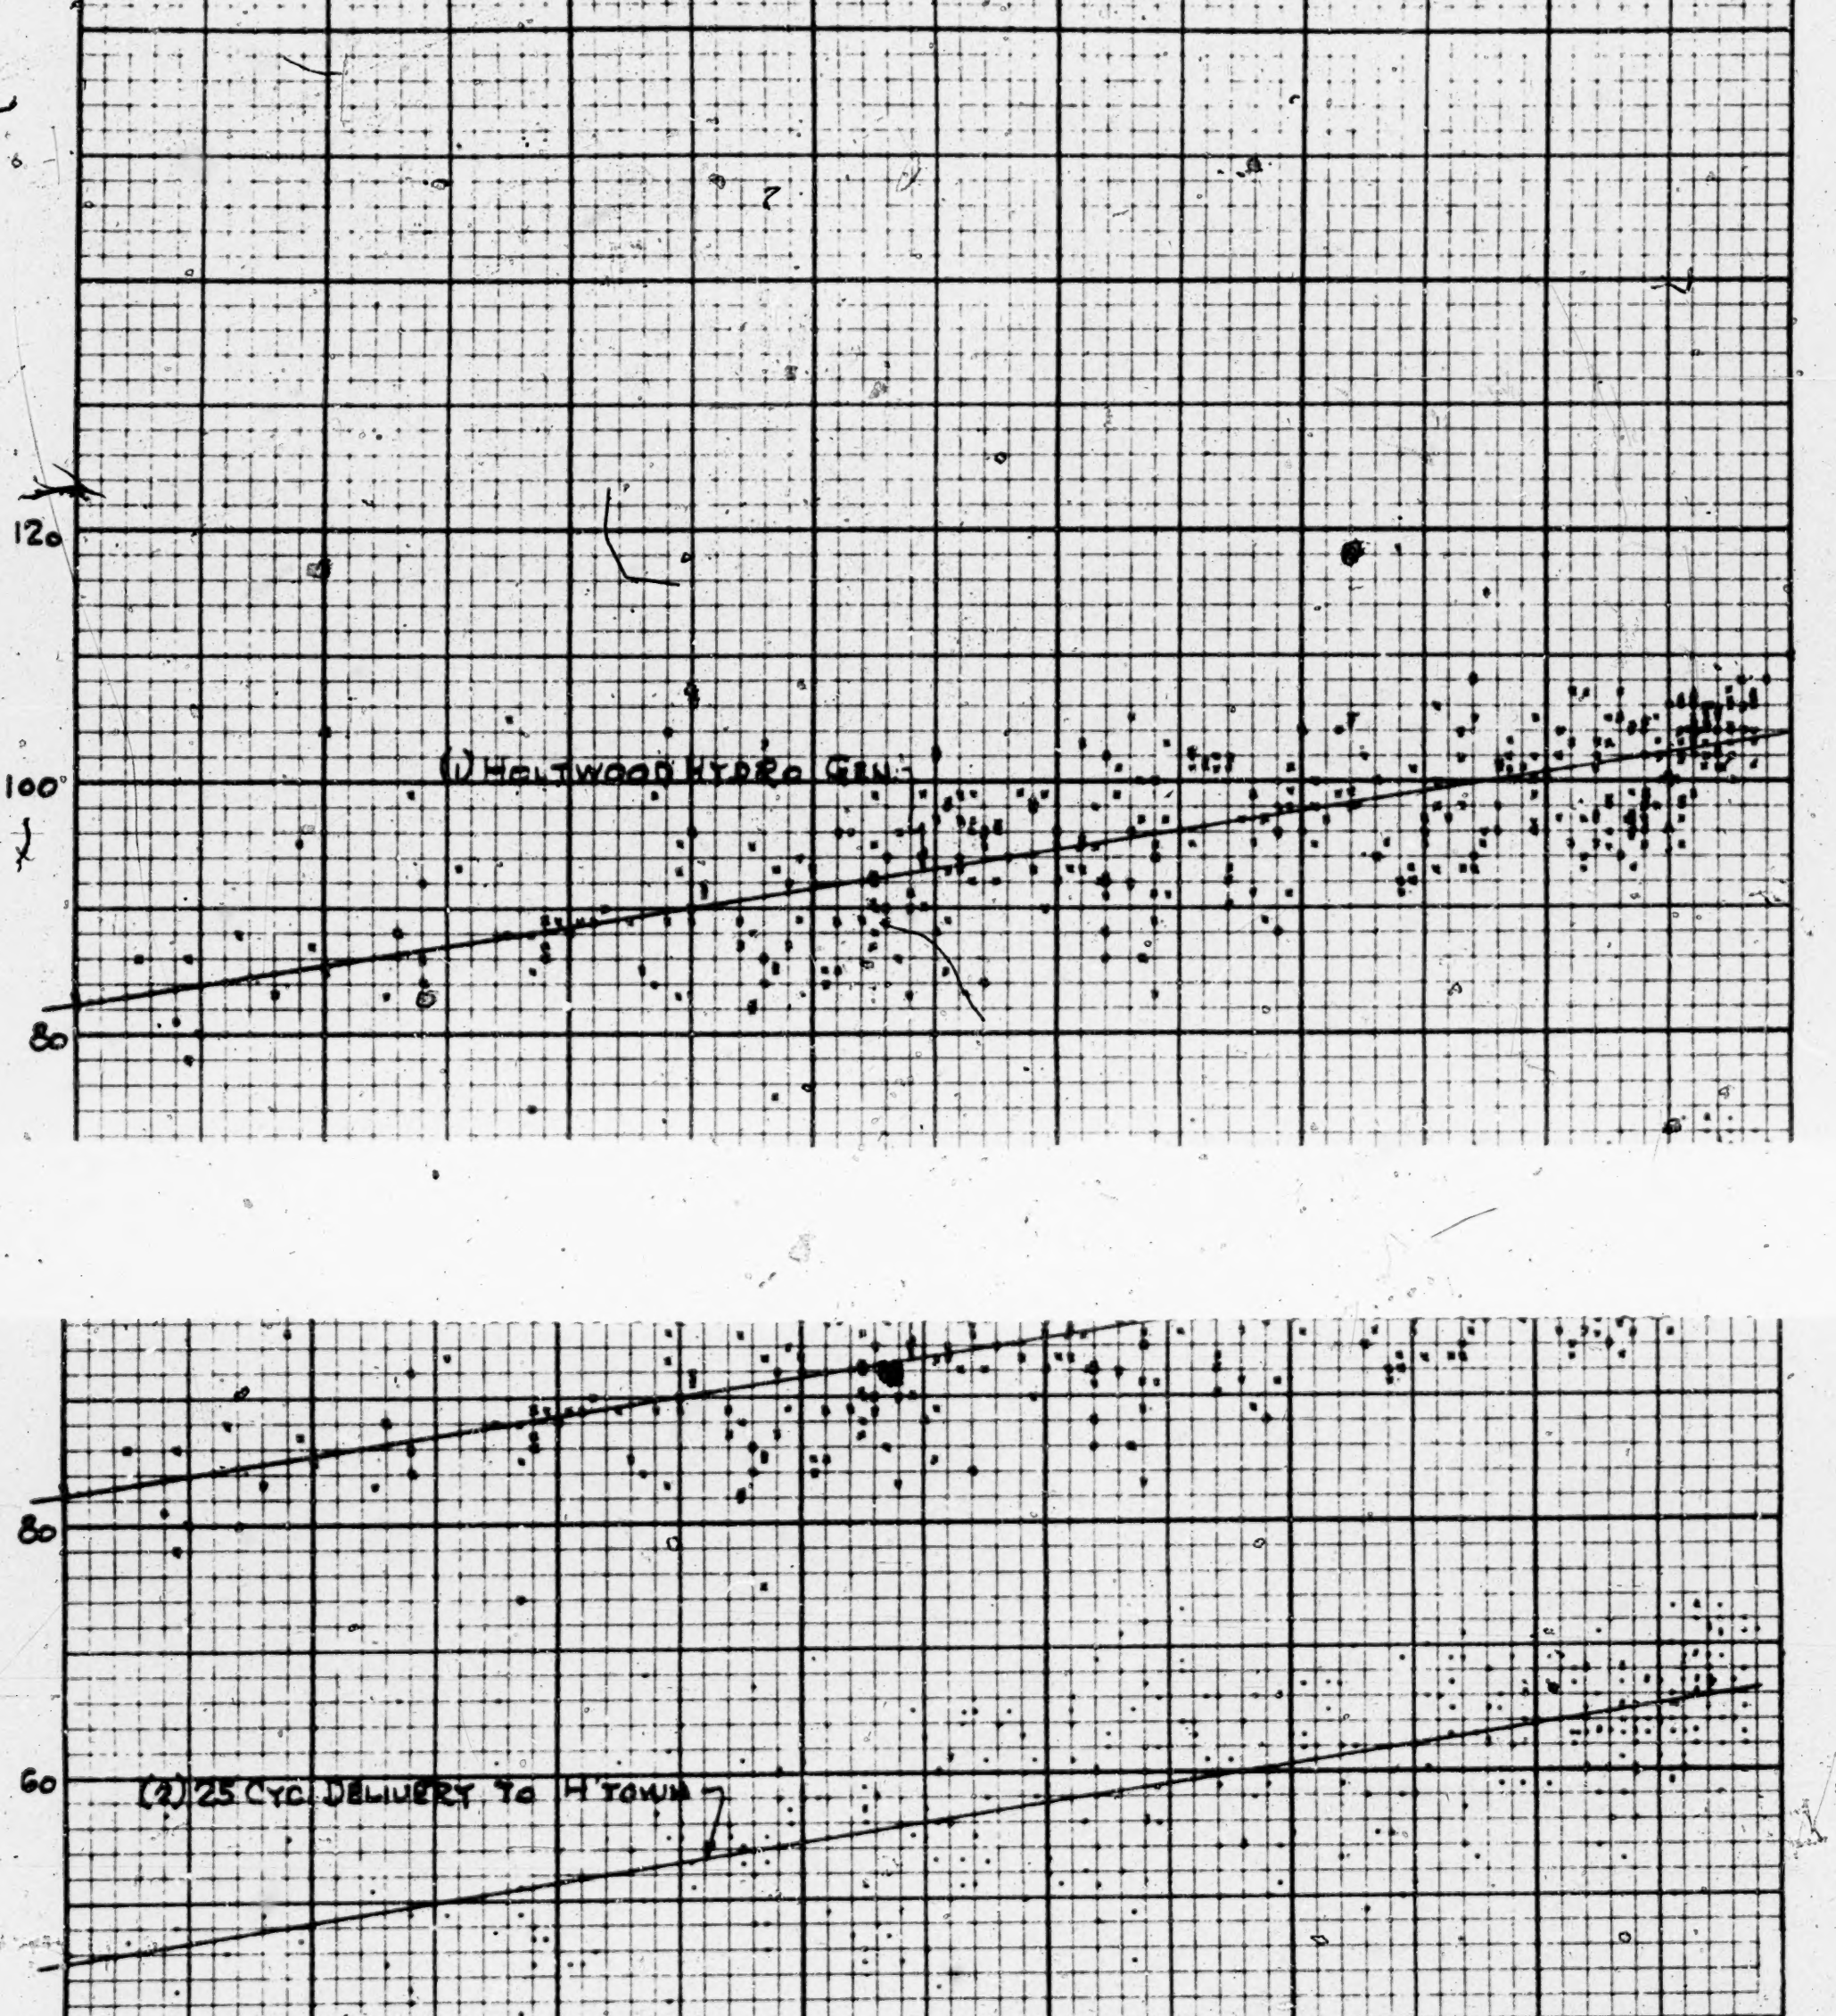

EXHIBIT NO. 511.

[25311]

January 6, 1947

To Mr. F. A. Leslie
From R. L. Ashley

Subject Revised Basis for Average Flow Hydro Generation.

When the present basis for computing excess and deficiency in the hydro generation was agreed upon in 1944, average flow generation was based on the 25-year record from 1917 to 1941, inclusive; however, it was agreed between the Pennsylvania Water & Power Company and ourselves, as stated in Mr. Greer's memorandum of December 21, 1944, that this basis would be revised at five-year intervals as soon as additional data are available. Therefore, beginning January 1, 1947, computations of excess and deficiency of hydro generation will be based upon the following average figures which have been determined for the 30-year period of 1917 to 1946, inclusive:

30-Year Average Flow Hydro Generation
100% Utilization
(1000's of Kilowatthours)

	Per Day	Per Week	Per Month
Jan.	4,343	30,401	134,633
Feb.	4,570	31,990	*127,960
Mar.	6,901	48,307	213,931
Apr.	6,936	48,552	208,080
May	5,672	39,704	175,832

*In leap year the figure for February is 132,530 mwh.

ITEM A

[25347] (page 1)

THIS AGREEMENT made this 12th day of April, 1910, between PENNSYLVANIA WATER & POWER COMPANY, a corporation of the State of Pennsylvania, party of the first part, hereinafter called the Power Company, and SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND, a corporation of the State of Maryland, party of the second part, hereinafter called the Transmission Company.

WITNESSETH that WHEREAS the Transmission Company has begun the construction and equipment of a Transformer House in Orangeville, Baltimore County, Maryland, and the construction of a line for the transmission of electric current between said Transformer House and a point on the State line between Pennsylvania and Maryland, for which purpose it has acquired a Right of Way, and

WHEREAS it is desirous of completing this Transformer House and line without interruption, in accordance with plans which were prepared by the Power Company and are known to it, and for this purpose requires to have a guarantee of sufficient funds to cover previous and future expenditure.

NOW THEREFORE the Power Company hereby guarantees to furnish to the Transmission Company all monies necessary for the completion of the Transformer House and transmission line, in accordance with such plans, in such amounts and at such times as said Transmission Company may desire, it being understood that the total amount of money so advanced shall be sufficient to include all expenses incidental to the completion of said Transformer House and Transmission Line, including salaries of engineers and draughtsmen, wages of laborers, cost of material and all other legitimate items of expense connected therewith, and the Power Company hereby binds itself to furnish monies

as aforesaid, regardless of any business or financial depression, or any other unfavorable condition, which may arise prior to the completion of said Transformer House and transmission line.

In consideration of the undertakings of the Power Company hereinbefore set forth, the Transmission Company hereby agrees to mortgage all property, real and personal, and all easements, privileges, franchises and rights which it now has, or hereafter may acquire by a Deed of Trust in which such institution, person or persons as the Power Company may designate, shall be named as Trustee or Trustees to secure an issue of Bonds not to exceed Two Million Five Hundred Thousand Dollars ($2,500,000.00) and to issue and deliver to the Power Company such Bonds taken at 90% of their face value plus accrued interest, to an amount equal to the total amount of money advanced by the Power Company to the Transmission Company, that is, for every Nine Hundred Dollars ($900.00) advanced by the Power Company, the Transmission Company will deliver to the Power Company Bonds to the value of One Thousand Dollars ($1,000.00), said Bonds to be dated July 1st, 1910 and to bear interest at the rate of Five Per Cent (5%) per annum from the date of issue, delivery to the Power Company to be made on August 1st, 1910, of Bonds to an amount equal to the amount of money already advanced by the Power Company to the Transmission Company, and to [25348] (page 2) be made on the first day of each month thereafter to an amount equal to the amount of money advanced by the Power Company to the Transmission Company during the preceding month, and to be made as to all said Bonds remaining upon the completion of said Transmission line. The Deed of Trust and the Bonds are to be in such form as the Power Company shall require.

It is further agreed that should the Transmission Company undertake the construction of lines, the erection of buildings or any other work in addition to that specified in this agreement, the Power Company will furnish the neces-

sary monies on the same terms and conditions as hereinbefore set forth, provided that before beginning such new work the Transmission Company shall secure the approval of the Power Company and shall carry out such new work in accordance with plans prepared by the Power Company.

IN WITNESS WHEREOF, this instrument has been executed by the parties hereto, the day and year first above written.

ITEM B

[25349] (page 1)

THIS AGREEMENT, made this 3rd day of April, 1911, between the PENNSYLVANIA WATER & POWER COMPANY, a corporation of the State of Pennsylvania (hereinafter called "The Power Company"), and the SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND, a corporation of the State of Maryland (hereinafter called "The Transmission Company");

WITNESSETH THAT WHEREAS the Power Company has a hydro-electric power plant at or near McCall Ferry, Pennsylvania, and has contracted to supply electric power therefrom to purchasers in the City of Baltimore; and

WHEREAS, The Transmission Company has a transmission line extending from the end of the transmission line of the Susquehanna Transmission Company of Pennsylvania, at the Maryland and Pennsylvania State Line, to a point outside of the City of Baltimore, where The Transmission Company has a transformer station; and

WHEREAS, The Power Company is entitled to first mortgage five per cent. bonds of The Transmission Company of an aggregate par value of $1,032,000. for advances made to April 1, 1911, and to additional bonds of the same series for advances since made, and will be entitled to further bonds upon making subsequent advances, pursuant to the contract between the parties hereto;

NOW, THEREFORE, in consideration of the premises, and of the mutual covenants and promises of the parties, it is agreed as follows:

The Transmission Company agrees to receive at said State Line such electricity and electrical energy as may be delivered to it by The Power Company, not exceeding the capacity of its line, and carry and deliver the same, less the

natural loss of transmission, to said transformer station, and there transform the same to such voltage as may be required by The Power Company, and thereupon make delivery thereof at said transformer station to purchasers from The Power Company, as may be directed by The Power Company.

The Transmission Company further agrees to maintain, operate and keep in repair its said transmission line and transformer station, and pay the taxes, insurance and other necessary expenses in connection therewith.

In consideration of the premises, The Power Company agrees to forbear and waive the payment of the interest for each successive six months' interest period on the bonds of The Transmission Company held by The Power Company, and to endorse upon such bonds at each interest date a cancellation of the interest accruing for the preceding six months, provided, however, The Transmission Company shall have faithfully performed its obligations under this agreement to such date. The Power Company agrees that such cancellation of interest on the bonds shall be operative though the bonds are deposited with the Trustee of the Power Company's mortgage, and that all the bonds of The Transmission Company received by The Power Company shall be so far kept in the ownership and control of the Power Company that the interest thereon may be effectually canceled, or, if that be not done, that The Power Company will pay in cash to The Transmission Company an amount equal to the interest accruing on the bonds no longer so kept.

[25350] (page 2)

The Power Company further agrees to pay to The Transmission Company on the first days of January and July in each year a sum equal to the cost of maintaining, operating and keeping in repair its said transmission line and transformer station, and the taxes, insurance and other necessary expenses in connection therewith, for the preced-

ing six months. In arriving at the sum aforesaid, The Power Company shall be credited with the incidental revenue collected by The Transmission Company, including receipts for agricultural leases and farming rights and the sale of wood and other products, but not with the proceeds of lands sold.

This agreement is to take effect from January 1, 1911, and may be terminated by either party forthwith upon a breach thereof on the part of the other party. If not so terminated, it is to remain in force until terminated by either party on six months' notice to the other party.

In Witness Whereof, the parties have executed this agreement the day and year first above written.

ITEM C.

[25351] (page 1)

THIS AGREEMENT, made on this 19th day of March, 1931, between PENNSYLVANIA WATER AND POWER COMPANY, a corporation of the State of Pennsylvania, party of the first part, (hereinafter called Power Company), SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND, a corporation of the State of Maryland, party of the second part, (hereinafter called Transmission Company), and CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a corporation of the State of Maryland, party of the third part, (hereinafter called Baltimore Company).

WHEREAS the Transmission Company is a wholly owned subsidiary of Power Company, and in pursuance of agreements, entered into on the 12th day of April, 1910, and the 3rd day of April, 1911, understood to construct and also to maintain, operate and keep in repair a transmission line and other necessary equipment for the purpose of conveying electrical power and energy from the Maryland-Pennsylvania State Line to a transformer substation, situated near the boundary line of Baltimore City, but now located in Baltimore City, which transmission line runs from said Maryland-Pennsylvania State Line through Harford and Baltimore Counties in the State of Maryland to said transformer station, at which point it delivers the said power in accordance with instructions of the Power Company; and

WHEREAS the Power Company and the Transmission Company have both fully performed all of the terms and stipulations of said contracts of April 12th, 1910, and April 3rd, 1911, above referred to, both of which contracts are in full force and effect and are in course of performance; and

WHEREAS the Power Company has heretofore notified the Transmission Company that it has agreed to enter into a contract with the Baltimore Company and Safe Harbor

Water Power Corporation, a Pennsylvania corporation, whereby, amongst other things, the Power Company will undertake to convey and transmit and cause to be conveyed and transmitted electrical power or energy, generated at the plant or dam of the Safe Harbor Water Power Corporation, situated in York and Lancaster Counties in the State of Pennsylvania, to, or approximately to, the step-down substations to be built by the Baltimore Company at or near Westport, Baltimore City, and Turner's Station, Baltimore County; and

WHEREAS the Power Company has requested the Transmission Company to acquire such lands, rights of way and easements as may be necessary, by purchase or by condemnation, and thereon to erect and construct two transmission lines, both beginning at the Maryland-Pennsylvania State Line, the first of which to be known as the Westport Line, will pass through Baltimore, Howard and Anne Arundel Counties to, or approximately to, a step-down substation to be built by the Baltimore Company, near its Westport power house, and the second of which, to be known as the Riverside Line, will run through Harford and Baltimore Counties to a step-down substation to be built by the Baltimore Company adjacent to the site of its proposed power house at Turner's Station in Baltimore County, the Westport Line to be completed and ready for operation when the first generating unit of the Safe Harbor Water Power Corporation is ready for service and operation, and the Riverside Line, to be constructed later, to be ready for service on a date to be agreed upon by the parties hereinbefore referred to; and

[25352] (page 2)

WHEREAS in order to provide and finance the cost of said additional facilities, as contemplated by the Power Company, the Baltimore Company and said Safe Harbor Water Power Corporation, the Transmission Company has authorized an increase of its capital stock from the sum or

amount of Fifty Thousand Dollars ($50,000), consisting of five hundred (500) shares of the par value of One Hundred Dollars ($100.00) each, whereof five (5) shares are now outstanding, to the sum or amount of Five Million Dollars ($5,000,000.00), consisting of fifty thousand (50,000) shares of the par value of One Hundred Dollars ($100.00) each, and to finance the cost of said additional facilities by the sale of so many of said shares of stock as may be required to the Power Company upon the terms herein set forth.

THEREFORE THESE PRESENTS WITNESS, that in consideration of the premises and of the mutual covenants and agreements herein contained, the parties hereto have agreed as follows:

First: This agreement is supplementary to, and not in substitution for, the agreements of April 12th, 1910, and April 3rd, 1911, above referred to, which said agreements, with all their terms, provisions and conditions, are hereby reaffirmed between the Power Company and the Transmission Company, except as hereinafter provided.

Second: The Transmission Company agrees to purchase and acquire lands, rights of way and easements, and to construct the transmission lines hereinbefore referred to, in accordance with plans and specifications supplied by the Power Company to the Transmission Company; and the Transmission Company further agrees to receive, carry, convey and transmit electricity and electrical energy delivered to it at said Maryland-Pennsylvania State Line by the Power Company, up to but not exceeding the capacity of its said transmission lines, as the same may be originally constructed or may be added to and extended any time in the future. The Transmission Company further agrees to make all necessary additions to and extensions of its transmission lines, including new and additional buildings, lines and other facilities, machinery and equipment of all kinds, as may be reasonably requested by the Power Company.

Third: The Power Company agrees to advance and furnish to the Transmission Company the full cost of said lands, rights of way and easements, new and additional buildings, transmission lines and other facilities, machinery and equipment of all kinds, including costs of condemnation, if condemnation be necessary, counsel fees, salaries of engineers and draughtsmen, wages of laborers, cost of materials, and all other items of expense connected therewith, and to furnish said moneys regardless of business conditions or financial depression or any other unfavorable condition which may arise prior to the completion of said transmission lines as the same may be originally constructed, or may be added to and extended any time in the future.

Fourth: The Transmission Company agrees to pay to the Power Company interest on all such advances until such advances shall have been paid as hereinafter provided.

[25353] (page 3)

Fifth: The Power Company shall and will accept in payment of its said advances and accumulated interest thereon, shares of stock of the Transmission Company at the par value thereof, if requested by the Transmission Company so to do; or will accept cash therefor, or such obligations of the Transmission Company as may be acceptable to the Power Company, all subject, however, to the approval of the Public Service Commission of the State of Maryland.

Sixth: Upon the completion by the Transmission Company of any of the construction work enumerated in paragraph "Second" hereof, or upon any date or dates as may be agreed upon by the parties hereto from time to time, accounts shall be stated of the sums advanced by the Power Company for the purposes aforesaid, together with accumulated interest thereon, and settlement thereof shall be

made in accordance with the "Fifth" paragraph of this agreement.

Seventh: The Transmission Company agrees to receive at said Maryland-Pennsylvania State Line such electricity and electrical energy as may be delivered to it by the Power Company, not exceeding the capacity of its said lines, or either of them, and to carry and deliver the same, less the natural waste of transmission, to the points in or near the City of Baltimore, as hereinbefore referred to, and there to make delivery of the same to the Consolidated Gas Electric Light and Power Company of Baltimore.

The Transmission Company further agrees to maintain, operate and keep in repair its transmission system in this agreement referred to.

Eighth: The Power Company undertakes to pay in cash to the Transmission Company, or for its account, all sums expended by the Transmission Company for the maintenance, operation and repair of its said transmission lines, and for its taxes, insurance premiums, general expenses and all other necessary expenditures required of the Transmission Company of whatsoever kind and howsoever incurred, including renewals and replacements, and any damage claims.

Ninth: The Transmission Company will at all times perform the obligations undertaken by the Power Company under its agreement with the Baltimore Company and Safe Harbor Water Power Corporation, hereinbefore referred to, insofar as the Power Company binds itself to do acts and things which are performable through the instrumentality of the Transmission Company.

Tenth: In order that the Transmission Company shall be able at all times to comply fully with the provisions of its charter, as amended, and the laws of the State of Mary-

land, Baltimore Company and Power Company agree to supply to the said Transmission Company such amounts of hydro electrical energy received from the Safe Harbor plant and/or Holtwood Plant and steam generated electrical energy as the said Transmission Company may require from time to time during the term of this agreement, in order to supply electrical energy to such of the public as may apply for it, or to comply with any order of the Public Service Commission of Maryland. The Baltimore Company also agrees that for the aforesaid purposes it will promptly make its distribution lines and facilities available for the use of the said Transmission Company.

[25354] (page 4)

The rates to be paid by the Transmission Company for the energy and the use of the distribution lines and facilities of the Baltimore Company shall be agreed upon from time to time by the said two companies. In the event the companies are unable to agree upon the rates, the Baltimore Company shall supply the electrical energy to the Transmission Company as soon as it is needed by the latter Company, and permit it to use its distribution lines and facilities, and the question of the rates shall be settled by arbitration. Each of the parties shall name one arbitrator and the two thus appointed shall choose the third arbitrator. Should the second or third arbitrator remain unselected at the expiration of thirty (30) days after notice of appeal to arbitration is given by either party, the second or third arbitrator, or both, shall be selected by one of the members of the Public Service Commission of Maryland. The determination of the arbitrators, or a majority of them, shall be final and binding upon the Transmission Company and the Baltimore Company.

Eleventh: This agreement is to take effect from March 19th, 1931, and is to remain in force until the 22nd day of April, 1980.

IN WITNESS WHEREOF the parties have executed this agreement the day and year first above written.

ITEM D.

[25355] (page 1)

AGREEMENT BETWEEN P. W. & P. COMPANY, SUSQ. TRANS. COMPANY OF MARYLAND AND BALTIMORE COMPANY, CONCERNING TRANSMISSION LINE TO WASHINGTON

THIS SUPPLEMENTAL AGREEMENT made as of the first day of August, 1932, between PENNSYLVANIA WATER & POWER COMPANY, a corporation of the State of Pennsylvania, hereinafter called "Power Company," SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND, a corporation of the State of Maryland, hereinafter called "Transmission Company," and CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a corporation of the State of Maryland, hereinafter called "Baltimore Company."

WHEREAS Transmission Company is a wholly owned subsidiary of Power Company, and in pursuance of an agreement entered into on the nineteenth day of March, 1931, with Power Company and Baltimore Company, has constructed the section that is located in the State of Maryland, of the transmission line from Safe Harbor, Pennsylvania, to Baltimore, Maryland, known as the Westport line; and

WHEREAS in paragraph "Second" of the said agreement of March 19, 1931, Transmission Company further agreed to make at any time in the future all necessary additions to and extensions of its transmission lines, including new and additional buildings, lines and other facilities, machinery and equipment of all kinds, as may be reasonably requested by Power Company; and

WHEREAS Power Company has entered into a contract of even date herewith with Baltimore Company, whereby, amongst other things, Power Company will construct or cause to be constructed a high tension interconnection between the electric system of Baltimore Company and the

electric system of the Potomac Electric Power Company of Washington.

NOW, THEREFORE, THIS AGREEMENT WITNESSETH: That for and in consideration of the mutual covenants and agreements hereinafter contained and the sum of Five Dollars ($5.00) paid by each of the parties hereto to the other, receipt whereof is hereby acknowledged, and of other valuable considerations, Power Company, Transmission Company and Baltimore Company do covenant and agree as follows:

First: This agreement is supplementary to the said agreement of March 19, 1931, above referred to, and all the terms, provisions, and conditions contained therein are hereby reaffirmed between Power Company, Transmission Company and Baltimore Company.

Second: Power Company hereby requests Transmission Company, and Transmission Company hereby agrees, to construct, operate and maintain, as additions to and extensions of its transmission lines under paragraph "Second" of the said agreement of March 19, 1931, two (2) parallel and adjacent transmission lines of substantially the same design and construction as the said existing Westport line, to extend from a point [25356] (page 2) near Ellicott City, in Howard County, Maryland, on the said Westport transmission line of Transmission Company, east of the Ilchester Road and north of the Montgomery Road, to a point in Prince Georges County, near Takoma Park, Maryland, adjacent to the northeasterly boundary line of the District of Columbia, one of the said lines to be completed and ready for operation by October 1, 1933, and the other line to be constructed within two years after such date or as may be agreed upon by the parties hereto, together with a switching station to connect the said transmission lines to the existing Westport line of Transmission Company.

Third: Transmission Company agrees to transmit over said line such electrical power and energy as may be de-

livered to it at the terminals of said transmission lines for the purpose.

Fourth: Transmission Company will at all times perform the obligations undertaken by Power Company under its agreement with Baltimore Company, hereinbefore referred to, insofar as Power Company binds itself to do acts and things which are performable through the instrumentality of Transmission Company.

Fifth: In order that Transmission Company shall be able at all times to comply fully with the provisions of its charter, as amended, and the laws of the State of Maryland, Baltimore Company and Power Company agree to supply to said Transmission Company such amounts of electrical energy as said Transmission Company may require from time to time during the term of this agreement, in order to supply electrical energy to such of the public as may apply for it, or to comply with any order of the Public Service Commission of Maryland. Baltimore Company also agrees that for the aforesaid purposes it will promptly make its distribution lines and facilities available for the use of said Transmission Company.

The rates to be paid by Transmission Company for the energy and the use of the distribution lines and facilities of Baltimore Company shall be agreed upon from time to time by the said two companies. In the event the companies are unable to agree upon the rates, Baltimore Company shall supply the electrical energy to Transmission Company as soon as it is needed by the latter Company, and permit it to use its distribution lines and facilities, and the question of the rates shall be settled by arbitration. Each of the parties shall name one arbitrator and the two thus appointed shall choose the third arbitrator. Should the second or third arbitrator remain unselected at the expiration of thirty (30) days after notice of appeal to arbitration is given by either party, the second or third arbitrator, or both, shall be selected by one of the members of the Public

Service Commission of Maryland. The determination of the arbitrators, or a majority of them, shall be final and binding upon Transmission Company and Baltimore Company.

Sixth: This agreement shall remain in force until midnight of April 22, 1980.

ITEM E.

[25361] (page 1)

AGREEMENT BETWEEN SAFE HARBOR WATER POWER CORPORATION, CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE AND PENNSYLVANIA WATER AND POWER COMPANY.

THIS AGREEMENT made as of the 1st day of June, 1931, between SAFE HARBOR WATER POWER CORPORATION, a Pennsylvania corporation, hereinafter called "Safe Harbor Company," CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a Maryland corporation, hereinafter called "Baltimore Company," and PENNSYLVANIA WATER AND POWER COMPANY, a Pennsylvania corporation, hereinafter called "Holtwood Company."

Safe Harbor Company is constructing a hydro-electric development on the Susquehanna River at Safe Harbor, Pennsylvania, in York and Lancaster Counties. The so-called "initial development" will consist of six main generating units with a total turbine capacity of approximately 255,000 horsepower and the required step-up transformers, exclusive of high tension switching stations.

Baltimore Company is engaged in the generation, purchase and sale of electrical power and energy for light, heat and power purposes in the City of Baltimore and in the State of Maryland.

Holtwood Company is engaged in the generation, purchase and sale of electrical power and energy and owns and operates a hydro-electrical development and a steam-electric generating station on the Susquehanna River, below Safe Harbor, at Holtwood, Pennsylvania, in York and Lancaster Counties, and an interconnected transmission system.

[25362] (page 2)

Baltimore Company and Holtwood Company (referred to hereinafter as the "receiving companies") desire to purchase, and Safe Harbor Company desires to sell, the entire output of the initial Safe Harbor development.

Holtwood Company is now supplying electrical energy to Baltimore Company at Baltimore under an agreement dated December 31, 1927, and terminating December 31, 1970, to be supplemented by a supplemental agreement of even date herewith. Said agreement provides that the investment policies of the two companies for additional generating and transmission facilities shall be co-ordinated well in advance, that the co-operative use of facilities should be encouraged, and that "the joint use of property and equipment by the two parties shall give the greatest practical benefit to the general public supplied by the two systems and that all unnecessary duplication of investment and operating cost shall be avoided except such as would contribute toward the maintenance and improvement of the high standard of service rendered." Holtwood Company subsidiaries, the Susquehanna Transmission Company of Pennsylvania and the Susquehanna Transmission Company of Maryland, own and operate high tension transmission lines in Pennsylvania and Maryland and a large substation in Baltimore, for the purpose of delivering energy to Baltimore Company. For economy of operation and of division of loads among the several lines, co-ordination of investment, and avoiding duplication in equipment and personnel, it is desirable that Holtwood Company, through itself and/or subsidiaries, should be the carrier for Safe Harbor energy purchased by Baltimore Company.

The construction of Safe Harbor Company's initial development is to be financed through the issuance by Safe Harbor Company of stock and first mortgage bonds. The stock [25363] (page 3) issued or about to be issued by Safe Harbor Company is to be two-thirds voting stock and one-

third non-voting stock. Of the voting stock half is to be owned by Baltimore Company, half by Holtwood Company. All of the non-voting stock is to be owned by Baltimore Company. The bonds of Safe Harbor Company are to be guaranteed by Baltimore Company and/or Holtwood Company. As between Baltimore Company and Holtwood Company, Baltimore Company's ultimate liability on any such guaranty of the bonds is to be two-thirds, Holtwood Company's one-third.

Now, Therefore, This Agreement Witnesseth: That for and in consideration of the mutual covenants and agreements hereinafter contained and the sum of Five Dollars ($5.00) paid by each of the parties hereto to the other, receipt whereof is hereby acknowledged, and of other valuable considerations, Safe Harbor Company, Baltimore Company and Holtwood Company do covenant and agree as follows:

ARTICLE I

Duration of Agreement

This agreement shall remain in force until midnight of April 22, 1980.

ARTICLE II

Power and Energy Entitlements

Baltimore Company and Holtwood Company shall be entitled to all the capacity and energy available (other than any which may be required for the performance of any duty or obligation to serve imposed on Safe Harbor Company by its charter or otherwise by law) from the initial six unit development at Safe Harbor, equal to approximately 255,000 horsepower and 850,000,000 kwh, average annual energy [25364] (page 4). at full utilization, this total entitlement to be divided between Baltimore Company and Holtwood Company as follows:

The part of the total capacity and daily energy available from the initial development, as measured on the low

tension side of the step-up transformers at Safe Harbor, to which each receiving company is entitled will be called that company's "contract proportion." Baltimore Company's contract proportion shall be two-thirds and Holtwood Company's contract proportion one-third.

ARTICLE III

Other Entitlements

(*a*) At the request and for the benefit of either Baltimore Company or Holtwood Company, Safe Harbor Company shall install additional machinery or equipment, not included in the initial development, subject to the stipulation in the last paragraph of Article V, provided such request is submitted in writing to Safe Harbor Company at least eighteen months before the date when the facilities are to be completed, and that the arrangement is approved by the receiving company which is not making the request. Furthermore, Safe Harbor Company will not contract to supply power and energy (except any which may be required for the performance of any duty or obligation to serve imposed on it by its charter or otherwise by law) from additions to its plant to any party other than Baltimore Company and Holtwood Company without the written consent of both Baltimore Company and Holtwood Company.

(*b*) When there is an actual or threatened power shortage in the interconnected hydro and steam systems of the receiving companies, or of the customers of hydro plants located on the Susquehanna River below Safe Harbor, the Safe Harbor [25365] (page 5) reservoir will be operated to regulate the flow to the maximum shown to be possible by computations based on previous minimum flow periods. In the event of further power shortage, either Baltimore Company or Holtwood Company is entitled to draw from the reservoir its contract proportion of the then available storage, provided, however, that when and if either company alone exercises this right it will use a portion of its normal

energy entitlement to compensate the other receiving company for its loss in energy caused by the reduction in head due to such additional draw-down.

(*c*) Each of the receiving companies, Baltimore Company and Holtwood Company, is entitled to receive from Safe Harbor Company its contract proportion of all energy, payments or other compensations that Safe Harbor Company may be able to secure from the owners or operators of power plants on the Susquehanna River below Safe Harbor by reason of being beneficiaries of the operation of the Safe Harbor reservoir for flow regulation, or from supplying power and energy to any person or corporation other than Baltimore Company and Holtwood Company. Any such payments to which Baltimore Company and Holtwood Company may become entitled may be deducted from the payments required under Article V hereof.

ARTICLE IV

Co-ordination and Joint Use of Facilities

It is the intent *inter alia* of this long term agreement to encourage the maximum co-operative utilization of the power and energy entitlements and resources and other facilities of the parties hereto to the end that the joint use of their property and equipment shall give the greatest practical benefit to the public and that all duplication of investment and [25366] (page 6) operating cost shall be avoided except such as would contribute toward the maintenance and improvement of the high standard of service rendered. The parties hereto shall co-operate to the fullest extent in the selection of the most suitable equipment, in the coordination of their investment programs for additional generating capacity, transmission and tie-in facilities, etc., and shall so conduct their operations that economic interchange of power and energy during the different hours of the day, the seasons of the year, and over more prolonged periods, shall be encouraged in every possible way. For this pur-

pose Safe Harbor Company will not enter into other agreements with either receiving company without the approval of the other, and will take into consideration either receiving company's suggestions for the best co-ordinated utilization of all facilities that may be mutually beneficial.

ARTICLE V

Payments for Power and Energy

During the period prior to July 1, 1932, or such other date as may hereafter be agreed upon as the beginning of regular commercial service from the Safe Harbor plant, energy received by Baltimore Company, as metered at Baltimore Company's terminal station at or near Westport, and energy received by Holtwood Company, as metered on the low tension side of the 66,000 volt step-up transformers at Safe Harbor, shall be paid for by the respective receiving companies at reasonable rates to be agreed upon. It is the intention that, subject to the approval of regulatory authorities in the exercise of their respective powers and jurisdiction, this period will be considered to be part of the construction period, during which all of Safe Harbor Company's expenses will be charged to construction and its revenue will be credited to construction.

[25367] (page 7)

Thereafter the total combined annual payments for power and energy to be made by Baltimore Company and Holtwood Company to Safe Harbor Company, as nearly as possible in equal monthly installments, shall be as follows:

From and including the date on which the Safe Harbor plant goes into commercial service until December 31, 1932, at the rate of $1,400,000 per year.

For the calendar year 1933	$1,450,000
For the calendar year 1934	1,600,000
For the calendar year 1935	1,800,000
For the calendar year 1936	2,000,000
For the calendar year 1937	2,500,000

Provided, however, that in any event the annual payments for said years shall be not less than the respective amounts required by Safe Harbor Company to pay its bond interest and sinking fund charges, over and above operating expenses, including allowance for depreciation.

Beginning January 1, 1938, the annual payment shall be such amount as is required to yield to Safe Harbor Company a net income of seven per cent., after all reasonable operating expenses, including maintenance and general expenses, insurance, taxes and reasonable allowance for depreciation, on its accumulated actual investment in the initial development (*i.e.*, the actual legitimate investment, as defined in the Federal Water Power Act and in the Rules and Regulations of the Federal Power Commission), averaged for the year in question, without regard to the amount of power actually furnished.

The above payments for energy and/or power shall be subject to increase and/or decrease from time to time by order of regulatory authorities within their respective powers and jurisdiction, including the power to fix reasonable rates, [25368] (page 8) under the constitution and laws of Pennsylvania, Maryland and the United States; and may also be increased by agreement of the parties subject to the regulatory powers of such authorities.

The combined annual payment shall be pro-rated between Baltimore Company and Holtwood Company in the ratio of their contract proportions; *i.e.*, each shall pay to Safe Harbor Company its contract proportion of the total payment specified herein.

In the event that Safe Harbor Company provides additional facilities at the request of either Baltimore Company or Holtwood Company as provided in Article III, Paragraph (*a*), the receiving company for whose benefit the facilities are provided shall make to Safe Harbor Company additional payments such that Safe Harbor Company's rate of net income on its actual accumulated in-

vestment shall be the same as it would have been without the additions, under the terms hereinbefore set forth.

ARTICLE VI

Guaranty of Bonds

To finance the construction of its initial development Safe Harbor Company will issue its 4½ per cent. First Mortgage Bonds in the principal amount of $21,000,000 or such other amount as may be agreed upon between Safe Harbor Company, Baltimore Company and Holtwood Company. The terms and provisions of such bonds and of the mortgage to secure them shall be approved by Baltimore Company and Holtwood Company. Payment of the principal of and interest on said bonds shall be unconditionally guaranteed to the holders thereof and/or to the Trustee under the mortgage securing the bonds by Baltimore Company and/or Holtwood [25369]. (page 9) Company jointly and/or severally by endorsement on the bonds and/or otherwise. Whether such guaranty to the holders of bonds and/or the Trustee be a joint, several or joint and several guaranty or guaranties of Baltimore Company and Holtwood Company or either, in any event Baltimore Company and Holtwood Company, as between themselves, shall ultimately assume and bear respectively two-thirds and one-third of any and all liability on or in respect of such guaranty. Anything herein to the contrary notwithstanding, Holtwood Company assumes and shall assume no liability either to bondholders or Trustee or to Baltimore Company on or in respect of any such guaranty before September 1, 1931, or for or in respect of any default of Safe Harbor Company occurring before September 1, 1931, but Holtwood Company hereby covenants and agrees (as a condition precedent to the continuance after September 1, 1931 of any of Holtwood Company's rights under this agreement) that on September 1, 1931 it will guarantee and/or assume liability on and in respect of any guaranty to the

full extent hereinbefore provided, and will execute such further assurances by way of guaranty, assumption of guaranty, counter-indemnity and/or otherwise as may reasonably be required.

ARTICLE VII

Transmission Lines and Charges

Baltimore Company desires its contract proportion of electrical energy to be delivered at the points of delivery specified in Article XII, and agrees to pay the cost of transmission from Safe Harbor to said delivery points in addition to making the payments named in Article V. As set forth in the recitals herein, Holtwood Company, through subsidiaries, already has a transmission system and organization and is [25370] (page 10) best qualified to convey, or cause to be conveyed, energy from Safe Harbor to Baltimore economically and in co-ordination with the supply from Holtwood to Baltimore. Therefore Baltimore Company and Safe Harbor Company desire Holtwood Company, and Holtwood Company undertakes, to transmit or cause to be transmitted to Baltimore the energy sold by Safe Harbor Company to Baltimore Company, and Baltimore Company agrees to pay directly to Holtwood Company certain charges for such transmission service, as hereinafter provided. Should Holtwood Company at any time fail to transmit or cause to be transmitted any of the energy sold by Safe Harbor Company to Baltimore Company, Holtwood Company forthwith will purchase all such energy from Safe Harbor Company at Safe Harbor and will pay therefor at the rates payable by Baltimore Company therefor under Article V hereof.

Holtwood Company agrees to construct, operate and maintain and/or cause to be constructed, operated and maintained (in its own rights and/or through subsidiaries) two 220,000 volt single circuit steel tower transmission lines on separate rights-of-way from Safe Harbor to Baltimore, and a 220,000 volt switching station at Safe Harbor when it

becomes necessary. The first transmission line, to be known as the Westport line, will pass through York County in Pennsylvania, and Baltimore, Howard and Anne Arundel Counties in Maryland, to the step-down substation to be built by Baltimore Company near its Westport power house (the term "substation" as here used including the high tension structures and leads from the transformers to the Baltimore City line). The second line, to be known as the Riverside line, will pass through York County in Pennsylvania, and Harford and Baltimore Counties in Maryland, to the step-down substation to be built by Baltimore Company adjacent [25371] (page 11) to the site of its proposed power house at Turner's Station in Baltimore County. The Westport line shall be completed and ready for operation when the first main generating unit at Safe Harbor is ready for service. The Riverside line shall be constructed later, to be ready for service at a date to be agreed upon by the parties hereto.

From and after the respective dates on which each line goes into service Baltimore Company shall pay to Holtwood Company annually for each calendar year (*a*) the sum of twelve monthly amounts, computed at the end of each calendar month, equal to 10.25% per annum of the cost, on the books of Holtwood Company and its subsidiaries, of said transmission lines and switching station and net additions thereto plus (*b*) an amount equal to all reasonable operating expenses, except depreciation (or provision therefor through renewals and replacements), including maintenance and general expenses, insurance and taxes, in the operation of said transmission lines and switching station. The amounts of said annual payments by Baltimore Company to Holtwood Company shall be estimated by Baltimore Company and Holtwood Company in advance and shall be paid as nearly as possible in equal monthly installments, the payment for any month to be made not later than the 15th day of the next succeeding month with subsequent adjustment to the next yearly payment. Said

payments shall be subject to increase and/or decrease from time to time by order of regulatory authorities within their respective powers and jurisdiction, including the power to fix reasonable rates, under the constitution and laws of Pennsylvania, Maryland and the United States; and may also be increased by agreement of Baltimore Company and Holtwood Company subject to the regulatory powers of such authorities.

[25372] (page 12)

The Baltimore Company shall pay the above costs and charges on the 220,000 volt switching station at Safe Harbor so long as it is used exclusively in connection with transmitting energy to and from Baltimore, and if the said station is used for a tie-in with other power systems, an equitable apportionment of the aforesaid costs and charges shall be made between the Baltimore Company, the Holtwood Company and/or the Safe Harbor Company.

ARTICLE VIII

Causes Beyond Control

If at any time during the continuance of this agreement Safe Harbor Company shall be prevented from supplying and Baltimore Company and Holtwood Company from receiving all or any part of the power and energy herein specified, by reason of war, rebellion, civil disturbance, strikes, serious epidemics, major catastrophe, or any other cause of a like nature beyond the control of either party, the obligation of Safe Harbor Company to supply and the obligation of Baltimore Company and Holtwood Company to take power and energy herein specified shall cease until such time as the party so incapacitated shall, by the exercise of reasonable diligence, be able to resume such supply or use, and a reasonable abatement in the payments by Baltimore Company and Holtwood Company shall be made; provided, however, that in no event shall such abatement reduce such payments to less than the

respective amounts required by Safe Harbor Company to pay its bond interest and sinking fund charges, over and above operating expenses, including allowance for depreciation.

[25373] (page 13)

ARTICLE IX

Terms of Payment

All bills for power and energy as provided in Article V shall be rendered by Safe Harbor Company to Baltimore Company and Holtwood Company, and for transmission services as provided in Article VII shall be rendered by Holtwood Company to Baltimore Company, for each calendar month not later than the fifth day of the next succeeding month, and shall be paid on or before the fifteenth day of said month.

ARTICLE X

Audit of Costs

For the purpose of determining Safe Harbor Company's investment and operating costs and income as required by the provisions of Article V Baltimore Company and Holtwood Company shall each have complete access to and may audit the accounts of Safe Harbor Company at any time.

ARTICLE XI

Characteristics of Supply

Unless otherwise agreed by the parties hereto, the electrical energy supplied under this agreement shall be in the form of three phase alternating current at a normal frequency of 60 cycles per second, and at approximately 220,000 volts as to supply to Baltimore Company and approximately 66,000 volts as to supply to Holtwood Company.

Safe Harbor Company shall at all times keep its equipment in first-class condition in accordance with good engi-

neering practice and shall arrange whenever possible to have all maintenance work done in the low flow periods. If any [25374] (page 14) equipment by necessity is out of service during high flow, Safe Harbor Company shall use every reasonable effort to return equipment to service as quickly as possible, consistent with high standards of operating and maintenance practice.

ARTICLE XII

Points of Delivery

Power and energy contracted for hereunder shall be delivered to Baltimore Company at the high tension (220,000 volt) terminals of its step-down substations at or near Westport, Baltimore City, and Turner's Station, Baltimore County, and/or elsewhere in the State of Maryland as the parties hereto may agree, and to Holtwood Company on the high tension (66,000 volt) side of the step-up transformers installed by Safe Harbor Company for supply to Holtwood Company, and/or elsewhere as the parties hereto may agree.

ARTICLE XIII

Metering

For the purpose of allotting capacity and energy to the receiving companies, integrating watthour meters equipped with ratchets shall be installed by Safe Harbor Company on the low tension side of the step-up transformers at Safe Harbor. For checking purposes and for use in case of backfeed, Baltimore Company shall install two sets of ratchet integrating watthour meters, one for registering incoming energy and one for registering backfeed, on the low tension side of the step-down transformers at Baltimore.

Procedure in respect to maintenance, testing, calibration and correction, registration records and precision tolerance of metering equipment shall be in accordance with good practice, [25375] (page 15) as may be agreed upon by the parties hereto from time to time.

ARTICLE XIV

Operating Committee

Within thirty days after the execution of this agreement Baltimore Company and Holtwood Company shall each appoint one representative to act as its agent for investigation, consultation and advice in all operating, engineering and accounting matters pertaining to this agreement. Each appointment shall be evidenced by written notice to the other party signed by an executive officer. Either party at any time may change its representative or withhold or withdraw from its representative the authority to act for it in any matters specified in the notice, provided that it designate in such notice other representation in respect to such matters. These representatives, to be known as the Operating Committee, shall confer upon request of either; in case of their inability to agree, the question in dispute shall be submitted to the Presidents of the respective companies for their decision.

ARTICLE XV

Arbitration

In case of any dispute arising between any of the Companies which are parties to this agreement, the said dispute shall be referred to a Board of Arbitration upon service of written notice by any party to the other parties hereto.

The said Board of Arbitration shall consist of three members, the first member to be chosen by the party or parties complaining, the second member to be chosen by the opposing party or parties, and the third member to be chosen by the first and second members. Should the second [25376] (page 16) or third member remain unselected at the expiration of thirty days after notice of arbitration is given, then upon the request of the complaining party, and upon notice thereof having been given to the other parties hereto, the second or third member, or both, of the Arbitra-

tion Board shall be selected by the then Chief Judge of the Supreme Bench of Baltimore City or, in the event of the said Judge's disinclination or failure to act within thirty days, by the then Chairman of the Public Service Commission of Maryland.

The Board of Arbitrators shall proceed at its earliest convenience to hear and determine the questions at issue after having given each party hereto not less than five days notice of the time and place of the first meeting.

Each party shall be permitted to be represented by counsel before the Board of Arbitrators, and to present in full, by competent witnesses, all facts, figures and statements which might aid the Board of Arbitrators to give a final and fair judgment as to the questions in dispute.

The determination of the Board of Arbitrators, or a majority thereof, shall be made within sixty days after the submission to said Board, unless prevented by circumstances unforeseen, and the decision of the Board of Arbitrators, or a majority thereof, shall be final and conclusive upon the parties hereto and said parties shall abide by such decision.

All expenses in connection with such arbitration, including a reasonable compensation for the arbitrators, shall be divided equally between the Companies who are parties to the arbitration, with the exception of expenses and counsel, witnesses and employes of the parties hereto, which expenses shall be borne by the parties incurring them.

All notices herein provided for may be given by serving the same in writing, or by sending the same by registered [25377] (page 17) mail addressed to the parties interested at their respective principal places of business.

In Testimony Whereof each of the parties hereto has caused these presents to be signed in its corporate name by its President or a Vice-President and its corporate seal to be hereunto affixed, duly attested by its Secretary or an

Assistant Secretary as of the day and year first above written.

ITEM F.

[25378] (page 1)

AGREEMENT BETWEEN SAFE HARBOR COMPANY, BALTIMORE COMPANY AND HOLTWOOD COMPANY, CONCERNING TRANSMISSION LINE TO WASHINGTON

THIS SUPPLEMENTAL AGREEMENT made as of the first day of August, 1932, between SAFE HARBOR WATER POWER CORPORATION, a Pennsylvania Corporation, hereinafter called "Safe Harbor Company," CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a Maryland Corporation, hereinafter called "Baltimore Company," and PENNSYLVANIA WATER & POWER COMPANY, a Pennsylvania Corporation, hereinafter called "Holtwood Company."

WHEREAS in pursuance of Article VII of an agreement entered into on the first day of June, 1931, by the parties hereto, Holtwood Company, through its subsidiaries, has constructed, and operates and maintains a transmission line from Safe Harbor to Baltimore, known as the Westport line, and transmits to Baltimore Company the energy sold by Safe Harbor Company to Baltimore Company, and Baltimore Company pays directly to Holtwood Company certain charges for such transmission service; and

WHEREAS it was pro ded in Article XII of said agreement of June 1, 1931, that the electrical power and energy contracted for thereunder by Baltimore Company was to be delivered to Baltimore Company a s substations at or near Westport, Baltimore City, and Turner's station, Baltimore County, and/or elsewhere in the State of Maryland as the parties hereto might agree; and

WHEREAS Baltimore Company has entered into an agreement on the sixteenth day of June, 1932, with the Potomac Electric Power Company of Washington, hereinafter called "Washington Company," whereby amongst other things, Baltimore Company undertook, directly or in-

directly, to construct, operate and maintain a high tension interconnection between its electric system and the electric system of Washington Company; and

WHEREAS to facilitate such interconnection, Baltimore Company has requested Holtwood Company, and Holtwood Company has agreed, to construct, operate and maintain two (2) parallel and adjacent transmission lines to extend from a point near Ellicott City, Howard County, Maryland, on the said Westport line, to a point near Takoma Park, Prince Georges County, Maryland, on the system of Washington Company, together with the necessary switching facilities near Ellicott City to tap the said Westport line.

NOW, THEREFORE, THIS AGREEMENT WITNESSETH: That for and in consideration of the mutual convenants and agreements hereinafter contained and the sum of Five Dollars ($5.00) paid by each of the parties hereto to the other, receipt whereof is hereby acknowledged, and of other valuable considerations, Safe Harbor Company, Baltimore Company and Holtwood Company do covenant and agree as follows:

[25379] (page 2)

First: This agreement is supplementary to the Agreement of June 1, 1931 above referred to, which agreement with all its terms, provisions, and conditions is hereby reaffirmed between Baltimore Company, Safe Harbor Company and Holtwood Company, except as hereinafter provided.

Second: Holtwood Company agrees to construct, operate and maintain and/or cause to be constructed, operated and maintained (in its own rights and/or through a subsidiary) a switching station near Ellicott City on the said Westport line, and two (2) parallel and adjacent transmission lines of substantially the same design and construction as the said existing Westport line, to extend from a point

near Ellicott City in Howard County, Maryland, on the said Westport transmission line east of the Ilchester Road and north of the Montgomery Road, to a point in Prince Georges County near Takoma Park, Maryland, adjacent to the northeasterly boundary line of the District of Columbia, one of the said lines to be completed and ready for operation by October 1, 1933, and the other line to be constructed within two (2) years after such date, or as may be agreed upon by the parties hereto.

Third: Holtwood Company agrees to transmit over said lines such electrical power and energy as may be delivered to it at the terminals of said transmission lines for the purpose.

Fourth: Baltimore Company hereby agrees to pay Holtwood Company for the said transmission service in accordance with the provisions of Article III of the Supplemental Agreement of June 1, 1931, between Baltimore Company and Holtwood Company.

Fifth: The parties hereto agree that the Takoma Park substation of Washington Company shall be an additional point of delivery under Article XII of the said agreement of June 1, 1931, between the parties hereto, for the power and energy contracted for thereunder by Baltimore Company.

Sixth: Holtwood Company will at all times perform the obligations undertaken by Baltimore Company under its agreement of June 16, 1932, with Washington Company, hereinbefore referred to, insofar as Baltimore Company binds itself to do acts and things which are performable through the instrumentality of Holtwood Company.

Seventh: This agreement shall remain in force until midnight of April 22, 1980.

[25380] (page 3)

IN WITNESS WHEREOF the parties hereto have executed this agreement the day and year first above written.

[25381]

SUPPLEMENTAL AGREEMENT

THIS SUPPLEMENTAL AGREEMENT made as of the 22nd day of November, 1939, between SAFE HARBOR WATER POWER CORPORATION, a Pennsylvania corporation, hereinafter called "Safe Harbor Company," CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a Maryland corporation, hereinafter called "Baltimore Company," and PENNSYLVANIA WATER & POWER COMPANY, a Pennsylvania corporation, hereinafter called "Holtwood Company."

WHEREAS, by agreement dated as of June 1st, 1931, hereinafter called the "Original Agreement," the parties hereto provided for the sale to Baltimore Company and Holtwood Company of the electrical power and energy generated by the Safe Harbor Company at its hydro-electric development at Safe Harbor, Pennsylvania, and

WHEREAS, the Baltimore Company and Holtwood Company, pursuant to Article III of the Original Agreement, have requested Safe Harbor Company to install additional machinery and equipment in order to provide for increased power and energy requirements of the Pennsylvania Railroad Company:

NOW, THEREFORE, the parties hereto do agree as follows:

Safe Harbor Company shall, subject to any necessary approval of regulatory authorities in the exercise of their respective powers and jurisdiction, proceed with and complete as soon as practicable, the installation of a 42,500 horsepower water wheel turbine and a 25 cycle, single phase generator in the No. 1 position in its Safe Harbor power house, together with cables from the power house to the

transformer substation of the Holtwood Company near the mouth of Conestoga Creek and all necessary protective, control and other appurtenant equipment, which turbine, generator and appurtenant equipment are herein collectively called the "No. 1 Unit."

[25382]

The Baltimore Company shall be entitled to two-thirds and the Holtwood Company to one-third of all the capacity and energy available from the No. 1 Unit. They shall make payments therefor, pursuant to Article V of the Original Agreement, in the ratio of their said entitlements.

In Testimony Whereof each of the parties hereto has caused these presents to be signed in its corporate name by its President or a Vice-President and its corporate seal to be hereunto affixed, duly attested by its Secretary or an Assistant Secretary as of the day and year first above written.

ITEM H.

[25387] (page 1)

THIS AGREEMENT, Made as of the 31st day of December, 1927, between CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a corporation of the State of Maryland, hereinafter called "Electric," and PENNSYLVANIA WATER AND POWER COMPANY, a corporation of the State of Pennsylvania, hereinafter called "Power."

WHEREAS, Electric is engaged in the sale of electricity for light, heat and power purposes in the City of Baltimore and territory adjacent thereto, and Power is engaged in the generation and sale of electrical energy and for this purpose owns and operates a hydro-electric plant and a steam-electric generating station at Holtwood, Lancaster County, Pennsylvania, and an interconnected transmission system; and

WHEREAS, Power has for a number of years supplied electrical energy to Electric, and it is the desire of the two parties to enter into a new contract setting forth the terms and conditions under which such electrical energy is hereafter to be supplied;

NOW, THEREFORE, THIS AGREEMENT WITNESSETH: That for and in consideration of the mutual covenants and agreements hereinafter expressed, and the sum of Five Dollars ($5.00) paid by each of the parties hereto to the other, receipt whereof is hereby acknowledged, and of other valuable considerations, Electric and Power do agree as follows:

ARTICLE 1.

DURATION OF AGREEMENT.

This agreement, effective as of January 1, 1927, supersedes all previous short-term arrangements for power and energy between Electric and Power and shall continue in force until midnight of December 31, 1970.

[25388] (page 2)

ARTICLE 2.

Basic Considerations.

The rates hereinafter referred to have been obtained as the result of careful determinations and exhaustive studies of the practical possibilities of the best coordination of the power resources and other facilities of Power and Electric. These studies have disclosed ways and means of rendering Power's supply of greater service value to Electric, by more complete coordination of the various factors controlling amount of peak service, than the amount and character of services heretofore supplied by Power to Electric. The various factors affecting the different elements of value have been investigated in detail by the engineering and operating experts of the two parties, and are set forth in the joint reports placed in the record files of Electric and Power and in the exhibits attached to this agreement and forming a part thereof. The following are the principal factors:

Without continuation of hydro supply Electric would have built, prior to the expiration of the last agreement between the said parties, and would now be operating a steam plant equal in capacity to the minimum predetermined one hour integrated hydro supply of Power (48,778 K. W.), plus allowance for reserves and swings; and this steam plant would have been equipped with substantially the same type of apparatus that was put in service by Electric during 1924, and its investment cost per kilowatt would not have been less than the estimated average cost ($103.62) of the four stages of Electric's Gould Street Station which was put into operation in 1927. The annual fixed charges on the investment in such a steam plant have been figured at the rate of 12.75%, equaling $13.21 per k. w.

The average cost of coal to Electric during the five and ten year periods ending with 1926 was in excess of $5.00 per [25389] (page 3) net ton unloaded at the generating sta-

tions, and it is expected that for a long period of years Electric's cost of coal for steam plant operation, if no hydro were available, would average not less than $5.00 per net ton. The value of Power's hydro as determined in the engineers' studies is based on a cost of coal of $5.00 per net ton, but the average rate per K. W. H. to be paid by Electric as hereinafter specified is based on a cost of coal 7% lower than $5.00 per net ton.

Certain other features of value in connection with Power's hydro supply have been investigated by the engineering and operating experts of the two parties and a determination of the average savings per year to Electric resulting therefrom has been agreed to in accordance with their joint reports, but they are not included as a consideration of the payments for power and energy hereinafter specified.

At any time during the term of this agreement upon demand of either party hereto (as more specifically provided in Article 7-B and in the exhibits attached to and forming part of this agreement), readjustment shall be made, substantially in accordance with the initial method of determining the several factors entering into the charges herein provided, of the fixed charge for capacity and proportion of charges for other entitlements of Electric, but the basic rates averaging 4.7365 mills per K. W. H. on a supply of 400 Million K. W. H. per year (Article 7-A), and the basic annual fixed charges of $13.21 per K. W. shall remain unchanged during the term of this agreement. The initially determined amount of 48,778 K. W. one hour integrated peak service to be paid for by Electric shall remain unchanged for the years 1928 and 1929.

It is further the intent of this long term agreement to broaden the scope of the cooperative utilization of power resources as well as of other facilities now owned or controlled or acquired in the future by either party to the end that the joint use of property and equipment by the two parties shall give [25390] (page 4) the greatest practical

benefit to the general public supplied by the two systems and that all unnecessary duplication of investment and operating cost shall be avoided except such as would contribute toward the maintenance and improvement of the high standard of the service rendered. Toward this end the investment policies of the two companies for providing increased steam generating facilities, or for developing hydro supply from new sources, shall be coordinated well in advance of the time before either party is committed to a definite plan of investment or disposal of power, and no major investment steps affecting power generating and transmission facilities shall be undertaken by either party without keeping the other fully informed of the work contemplated and granting it under otherwise equal conditions the position of preferred customer or seller, as the case may be.

The initially determined one hour integrated peak supply (48,778 K. W.) is not to be regarded as either a fixed maximum or minimum for which Electric need pay, and it is conceded that from the very nature of the conditions determining the availability and usability of this supply, variations from one year to another in the amount of peak service are to be expected and are allowable, subject to the following limitations:

1. During the period up to and including the calendar year immediately preceding the first year in which additional capacity is needed by Electric, as indicated by joint load estimates made by the two parties, the amount of one hour integrated peak service for which Electric shall be required to pay shall not average more than 48,778 K. W., unless expressly agreed to by the parties hereto.
2. Thereafter the increase in amount of one hour integrated peak supply paid for by Electric in any year over the preceding year shall not be greater than the actual increase in Electric's maximum one hour integrated total load.

[25391] (page 5)

3. Power agrees that the one hour integrated peak supply shall not be lower than a minimum of 25,000 K. W. unless expressly agreed to by the parties hereto or unless such lower peak supply is caused by load conditions, either of Electric or of Power's other customers, beyond the control of Power and not anticipated in forecasts of loads made by the two parties.

4. If at any time, as a result of a joint forecast made by Electric and Power, it is agreed that Electric should increase its own generating capacity or incur a tie-in investment, by reason either of expected increase in load or decrease in the amount of Power's one hour integrated peak service, or both, then during the period from January 1st of the year in which such capacity addition goes into service to January 1st of the first year in which Electric's effective load carrying capacity, plus the "maximum average peak service" mentioned hereinafter, is not sufficient to meet Electric's load requirements, the amount of one hour integrated peak service for which Electric shall be required to pay shall not average more than the amount of peak service redetermined in December immediately preceding the year in which Electric's capacity addition goes into service (referred to in this paragraph as "maximum average peak service"), and in any year during said period it shall not exceed said "maximum average peak service" by more than 5000 K. W. In the redetermination of peak service used in establishing the "maximum average peak service" there shall be excluded the effect of major changes in Power's load obligations to customers other than Electric which were not anticipated in the forecast which resulted in Electric's capacity addition. For example of procedure, see Exhibit "A".

[25392] (page 6)

ARTICLE 3.

Transition Period.

Inasmuch as certain features of equipment and of improved operating methods for the best coordination of hydro and steam resources have not been fully available to Electric during the entire year 1927, it has been agreed that the year 1927 shall be regarded as a transition period during which the rates and charges specified in this agreement will not be in effect. The rates and charges for the year 1927 are fixed at an energy rate of 6.0 mills per K. W. H. and a demand charge of $310,000 per year—including substation rental.

ARTICLE 4.

Electric's Power and Energy Entitlements.

Electric is entitled to all power and daily energy available from the Holtwood capacity of Power, as limited by the average daily river flow, in excess of that which may at the time be required by Power to supply its other customers. In addition Electric, at times of capacity shortage on its system, is entitled to draw from Power's pondage a maximum amount of storage energy (delivered basis) of 250,000 K. W. H. in any one day of the week, except Saturday and Sunday, or of approximately 600,000 K. W. H. (i. e., the amount of energy in storage above forebay elevation 161.5, which is 3½ feet below the crest of the concrete dam) in any five consecutive days, Saturdays and Sundays excluded, whenever same is available, and at a maximum rate of K. W. power draft that can be supplied from Power's generating capacity available for Electric, including therein the predetermined one hour integrated peak service as per Exhibit "A," but Power shall not be obligated to provide transformer and transmission investment in excess of that necessary to deliver a maximum one hour integrated peak

[25393] (page 7) service of 80,000 K. W., nor shall Electric be obligated to provide cable investment in excess of that necessary to avoid loss of hydro energy that would be deliverable to Electric except for insufficient cable capacity. In the case of emergencies, Power's various tie-in and diversion services may also be called upon by Electric to the extent that they are needed by Electric and can be made available by Power.

The principal purpose of the above provisions is to assure for Electric's use, when needed by it, a sufficient amount of weekly energy in kilowatt-hours to be supplied by Power to Electric so that this energy will yield to Electric a certain minimum amount of peak service in kilowatts, designated herein as the predetermined one hour integrated peak supply under minimum flow conditions. To meet the above condition, Electric shall take this amount of weekly energy when needed by it at such varying K. W. rates as may be necessary to hold down Electric's maximum one hour integrated steam peak to a value which is less than Electric's maximum one hour integrated peak during the same year by an amount in kilowatts which is equal to the said predetermined one hour integrated peak supply, and which has been initially established as 48,778 K. W., as per Exhibit "A."

The minimum amount of annual energy to which Electric is entitled from Power shall average over the term of this agreement approximately 400 million K. W. H., the amount supplied in individual years varying with river flow, load conditions on Electric's system and of Power's other customers, availability of equipment, etc.; the minimum annual entitlement taken as an average over a ten year period shall not be less than 350 million K. W. H., and the minimum in any one year not less than 250 million K. W. H., except in the event that Power may be prevented from supplying or Electric from receiving the minimum amount of energy by abnormal conditions or any cause beyond the control of either party.

[25394] (page 8)

ARTICLE 5.

OTHER ENTITLEMENTS OF ELECTRIC.

Electric is entitled to the use of certain transmission and distribution facilities now owned by, or to be provided for in the future by Power, if requested by Electric, as specifically set forth in Exhibits "B"; "C" and "D" attached to this Agreement and forming part thereof. As of January 1st, 1928, these facilities comprise:—

(a) Power's terminal and distribution station at Highlandtown, for certain portions of which Electric shall pay Power, as per Exhibit "B", annual fixed charges at the rate of 12.75% on the actual cost to Power, together with an annual charge equivalent to one-half of the average annual cost of substation operation and maintenance of the five year period ending with 1926, but exclusive of the cost of energy losses between Highlandtown and Pratt Street.

(b) The 60 cycle transmission line from Philadelphia Road Substation to Gunpowder Falls, built by Power for the use of Electric in 1924, for which Electric shall pay Power, as per Exhibit "C", annual fixed charges at the rate of 12.75% on the cost of this line to Power, but exclusive of the cost of right-of-way and other facilities owned by Power previous to the erection of this line, together with an annual charge equivalent to 10/90ths of the average annual cost of operation and maintenance of Power's transmission lines from Holtwood to Baltimore during the five year period ending with 1926.

(c) 13,200 and 33,000 volt switching equipment, two transformer banks totalling 8,000 K. V. A. capacity, a 33,000 volt river crossing, certain right-of-way facilities, etc., located at or near the Holtwood

Plant, which may be used in part, or as a whole, by Electric free of charge for delivering power at or near Havre de Grace, as per Exhibit "D".

[25395] (page 9)

ARTICLE 6.

Steam Energy Purchased.

Upon request of Power, Electric will supply to Power steam generated energy in excess of Electric's own requirements up to the limit of its available generating capacity, provided, however, that Electric is not obligated to start up a station which would not otherwise be operated. For all such energy Power will be billed for the daily net amount of such backfeed at actual costs plus ten per cent. (10%). The costs to be used are those reported on Electric's monthly production statement covering the month during which steam energy was furnished to Power.

ARTICLE 7.

Rates for Power and Energy.

Commencing January 1, 1928, there shall be a graded energy charge and an adjustable annual fixed charge for capacity as follows:—

A—Energy Rate:

Power shall bill Electric and Electric shall pay Power for the first 60 million K. W. H. per year at the rate of 6.0 mills per K. W. H., for the next 180 million K. W. H. per year at the rate of 4.97 mills per K. W. H. and for all energy in excess of 240 million K W. H. per year at the rate of 4.0 mills per K. W. H. The graded energy rates average 4.7365 mills per K. W. H. on a supply of 400 million K. W. H. per year. These steps in rates may be prorated as agreed upon for convenience of monthly billing.

B—Fixed Charge for Capacity:

Electric shall pay Power in equal monthly instalments an adjustable annual fixed charge for capacity of $820,486.31, of which amount $644,357.38 represents payment of $13.21 per K. W. on 48,778 K. W. (see [25396] (page 10) Article 2), and the balance of $176,128.93 represents payment by Electric for swing and reserve capacity service in excess of the predetermined one hour integrated peak supply under minimum flow conditions. The latter payment and the exact K. W. amount of one hour integrated peak service may be amended from time to time upon request in writing by either party by redetermining same in accordance with Article 2 and Exhibit "A", in substantially the same manner as the above payment and the amount of 48,778 K. W. peak service were originally determined by the engineers of the two parties, provided, however, that proper consideration is given not only to actual and predictable changes in the amount and character of the loads of Electric and of Power's other customers, in the generating capacities installed and their availability, in the methods of operation, etc., but also to any other factors that would be effective in determining the peak supply to Electric.

ARTICLE 8.

Payments.

All bills for power and energy, as per Article 7, and for rental, fixed charges, etc., as per Exhibits "B", "C" and "D", for each calendar month, shall be rendered by Power not later than the fifth day of the next succeeding month, and shall be paid by Electric on or before the fifteenth day of said month.

ARTICLE 9.

DIVISION OF LOAD BETWEEN HYDRO AND STEAM PLANTS.

During low flow Power's hydro plant shall operate on the peak portion of Electric's load and shall take care of fluctuations of load, and of reserve capacity within the limits of available capacity, but maximum pond level shall be restored under normal conditions every morning except Sundays and holidays.

[25397] (page 11)

During high flow (i. e., when water is spilled over the Holtwood dam for more than two consecutive hours), Power's hydro plant shall operate for maximum energy output, and shall carry the base portion of Electric's load, except that during periods of storms, ice runs, breakdowns or other emergencies beyond the control of either party, Electric shall be permitted to generate such reasonable amount of steam output as it may deem to be required by good practice and safety in the operation of its steam equipment and by due regard to service, but at all other times Electric shall not generate by steam to an extent that will cause hydro loss (i. e., a loss of hydro-electric energy which Power is ready and able to deliver to Electric and which could be absorbed by Electric's load), excepting such steam generation as is from time to time agreed by the parties hereto to be necessary for safe operation of Electric's steam plants from the point of view of minimum practical load, maximum rate of load change, and capacity margin.

Electric shall pay Power for hydro loss referred to in Article 4, caused by Electric's failure to provide adequate facilities for receiving hydro energy available from Power (with the exception of such occasional losses under extraordinary circumstances as may be reasonable), and also for hydro loss caused by Electric's unnecessary steam generation, i. e., steam generation in excess of the above mentioned

allowances, at the rate of four mills per kilowatt hour of such loss.

For the purpose of the above definition of unnecessary steam it is agreed that, under present conditions, at any time when Power's available hydro units are not fully loaded, Electric shall not generate by steam more than 5,000 K. W. H. per hour, except when a greater amount of generation is required to prevent the rate of load change at the steam plants from exceeding a rate agreed upon as a maximum.

[25398] (page 12)

The power factor shall, as far as reasonably convenient, be so adjusted as to permit of operation under minimum overall loss due to wattless current.

ARTICLE 10.

Points of Delivery, Metering, Characteristics of Energy Supply, Etc.

Points of delivery and metering for all energy supplied under this agreement shall be at the terminals of the outgoing low tension feeders at Power's Highlandtown Substation except for the energy delivered over Power's cables to Pratt Street Station, which shall be metered at Pratt Street.

The electrical energy supplied under this agreement shall be in the form of three-phase alternating current at a normal frequency of 25 cycles per second and at a normal potential of 13,200 volts.

Power and energy may be supplied at other points of delivery and at frequencies or voltages other than those specified herein and under conditions as may be agreed upon from time to time by the parties hereto, making due allowance for those factors that cannot be predicted in advance, such as extra cost to Power due to delivering, and savings to Electric due to receiving, supply at other points of de-

livery and at frequencies or voltages other than those specified above.

Meters shall be installed and calibrated and adjustment of bills in case of inaccuracy shall be made as set forth in Exhibit "E" attached hereto and made a part hereof.

In Witness Whereof, The parties hereto have caused this agreement to be executed in duplicate by their duly authorized officers and to be sealed with their respective [25399] (page 13) corporate seals, attested by their respective Secretaries, as of the day and year first above written.

[25400] (page 15)

EXHIBIT "A".

The purpose of this Exhibit is to give a summary of the more important subjects investigated by the respective experts of the two companies under the guidance of a Two-Man Board of Engineers, in response to specific questions placed before them for evaluation. All details in connection with these studies will be placed on the record files of the two companies and may be referred to from time to time in connection with the adjustments of certain annual charges.

The subjects were:

1. Cost of steam investment.
2. Load curves for monthly peak days.
3. Determination of minimum Holtwood peak service to Baltimore, averaged for three months of
3. (a) & 4 minimum flow—September, October and November and minimum flow peak service during other months.
4. (a) & 5 Effect of high flood stages, frazil ice and trash runs on minimum peak service.
6. Seasonal relation of prearranged maintenance work on steam units and of Electric's load requirements.
7. Energy value of Holtwood supply.
8. Average Holtwood capacity available for Baltimore on peak hours.
9. Value of substation service.
10. Forecast of probable trend of Holtwood peak service to Baltimore in future years.
11. Hydro battery service.
12. Effect of hydro supply on coal storage.

13. Comparison of capacity availability of Holtwood supply and of steam equipment under average conditions.

14. Analysis of service disturbances, traceable to hydro or steam source of supply.

15. Annual rate of fixed charges on investment.

[25401] (page 16)

This Exhibit also establishes a proper guide for adjusting from time to time, as provided in Article 7 (B), the amount of one hour integrated peak service during the three minimum flow months—September, October and November, and the equivalent K. W. amount of additional capacity service representing the swing service and reserve capacity allowance which is not included in the determination of the one hour integrated peak service.

The value per K. W. shall remain unchanged at $13.21 per K. W., which has been originally established as being equal to 12.75% on the estimated average cost per K. W. of the four stages of the Gould Street investment, as per Investigation No. 1.

As provided in Article 7 (B), either party at any time may request a redetermination of peak service. The amended peak service shall be the average of nine values (Cases a, b and c in September, October and November) obtained as in Investigations Nos. 3 and 3 (a). The actual computation cannot be made until December, as the actual loads for September, October and November of that year, as well as the load estimates for these months made the previous year, will form a part of the investigation. The resulting adjustment is to become effective on January first of the year following the request for adjustment and remain in effect until again changed due to request of either party, or until there is a major change in Power's load obligations to customers other than Electric, in which case there

shall be an equitable adjustment based on a new redetermination as of the preceding December.

In December of every year, whether or not a request for redetermination of peak service is expected to be made in the next year, Electric and Power shall jointly prepare estimates of hourly loads for the Baltimore peak days of the following September, October and November, so that these will be on file in case either party in the following year requests a redetermination of peak service.

Referring to the temporary limitation of Power's peak service, subsequent to a large step addition to Electric's load carrying capacity, as per the last paragraph of Article 2, the following example will illustrate the procedure that is to be followed:

Suppose that in 1935, for the purpose of deciding on the investment program, a joint forecast is made of loads, capacities and peak service in 1937. It is estimated that the one hour integrated peak service from power will be 42,000 K. W., and that this together with Electric's effective load carrying capacity will be inadequate in 1937, leaving a capacity [25402] (page 17) shortage of 10,000 K. W. It is also agreed that the best method of providing this additional capacity is the installation by Electric of a steam generating unit, which will yield a net increase in effective capacity in 1937 of more than 10,000 K. W. In December, 1936, a redetermination of one hour integrated peak service shall be made as outlined above. Suppose that the result is 40,000 K. W. Suppose also that the increase in effective load carrying capacity is sufficient to take care of the increase in Electric's load up to the end of 1940. Then from January 1, 1937, to December 31, 1940, the one hour integrated peak service paid for by Electric shall not average more than 40,000 K. W., and in any year in that period it shall not exceed 45,000 K. W.

The amount of $176,128.93 corresponds to 13,333 K. W. at $13.21, which is the equivalent amount of one hour integrated generating capacity agreed to as a compromise

payment to represent swing service and reserve capacity value not included in the one hour integrated peak service during minimum flow months. The proportion of the K. W. amount that Electric's payment to Power is based upon, to the K. W. amount of capacity service rendered by Power in excess of the one hour integrated supply under minimum flow conditions, may be established by two separate and distinct methods:

(a)—Swing service, i. e., the difference between maximum indicated load of electric and maximum one hour integrated load, has been determined initially as 13,500 K. W., as per Investigation No. 3. The ratio of reserve capacity of Electric's active steam generating stations to Electric's installed capacity less reserves has been determined as 26.9% to 73.1%, as per Investigation No. 3 (a). Applying the same ratio to Holtwood one hour integrated peak service of 48,778 K. W. would require an equivalent amount of 17,950 K. W. of steam reserve capacity. The sum of the two, i. e., 31,450 K. W., represents the combined swing and reserve capacity value of Holtwood supply. 13,333 K. W. is 42.4% of this amount.

(b)—Under Investigation No. 8 the average one hour integrated capacity available on Electric's peak hour has been determined as 76,800 K. W., which is 28,022 K. W. in excess of the initially determined one hour integrated peak service during minimum flow months. 13,333 K. W. is 47.6% of this amount.

The payment of $176,128.93, i. e., $13.21 on 13,333 K. W., shall be regarded as a minimum amount which may be adjusted from time to time (but shall never be lower than 13,333 K. W.), upon request in writing by either party. In the event that the amount of either the combined swing [25403] (page 18) and reserve capacity value, as per (a),

or the difference between average one hour integrated peak supply and minimum flow peak service, as per (b), is greater than the initially determined amount, Electric shall thereafter pay Power for half the number of K. W. increase of either of these two amounts, whichever is greater, at the rate of $13.21 per K. W. per annum beginning with the year succeeding the one in which the new determination was made.

[25404] (page 19)

EXHIBIT "B".

The purpose of this Exhibit is to give a proper guide for redetermining from time to time, upon request in writing by either party, the amount of substation rental, referred to in Article 5 (a) of the agreement, which has been determined by the engineers as $100,757.00, under Investigation No. 9, but from which amount it has been agreed to deduct the sum of $18,733.58, representing 12.75% on the Highlandtown-Pratt Street cable investment of $146,930.00 and Power hereby agrees to sell and Electric agrees to purchase January 1st, 1929, for the nominal consideration of $1.00, Power's underground cable system between Highlandtown Substation and Pratt Street Station. After said date Electric shall operate and maintain said cable system. The initially agreed to total annual rental for substation service shall therefore be $82,023.42, payable in equal monthly instalments of $6,835.285 each.

Electric may utilize, without payment of additional rental, unless such increased utilization increases Power's cost of operation and maintenance, Power's terminal and distribution station at Highlandtown, including grounds, buildings, equipment, etc., in whatever manner Electric may find most expedient for carrying out its distribution business in the City of Baltimore, in so far as such use of Power's property may be consistent with due regard to safety and good operating practice.

Power may continue to make additions and improvements to high tension lines and terminal arrangements, step-down transformers and their control equipment, communication system between power house and terminal station, etc., the cost of which shall be entirely borne by Power. For those additions and improvements to parts of buildings and equipment on which Electric pays Power the carrying charges, Electric shall pay Power carrying charges (at the rate of 12.75% per annum) and additional cost of opera-

tion and maintenance, provided, however, that either Electric has requested Power to install such additions and improvements, or that Power upon its own initiative, but with the approval of Electric, has carried out such work.

The Highlandtown station is used for two purposes:—(1) a step-down station for Power and (2) a distributing station for Electric.

The carrying charges and operating costs of such improvements as cannot be clearly allocated to either the step-down station part of Power's property or to that portion which functions as a distributing station [25405] (page 20) employed for Electric's service, shall be apportioned in equal half shares to the two parties, provided, however, that previous to the carrying out of such work notification in writing is given by one party to the other describing the purpose of the proposed improvement and stating the approximate amount of cost, thus affording to both companies an opportunity of coordinating such work with other improvements contemplated on other parts of the system.

In the event that at any time in the future actual developments such as improvements or extensions to property and equipment, abandonments, or other conditions the exact nature of which cannot be predicted over a long term of years, should cause the originally established payment or subsequent modifications thereof, based on a certain apportionment of carrying charges and operating costs, to appear either excessive or inadequate by reason of the above indicated developments, or as a result of material changes in basic costs of labor and material, or in consequence of more costly requirements of service for Electric, or for any other reasons, the two parties hereto shall agree on a new apportionment of carrying charges and of total actual cost of substation operation and maintenance of future years, in a manner that will thereafter allocate to each party a fair share of the costs corresponding to the use made of and the services rendered by these facilities.

[25406] (page 21)

EXHIBIT "C".

The purpose of this Exhibit is to set forth the basis of charges for use of the 60 cycle transmission line from Philadelphia Road Substation to Gunpowder Falls which Power built for the use of Electric in 1924. A formal agreement has heretofore not been made covering the continued use of these facilities and the charges therefore have been fluctuating from year to year.

Commencing January 1st, 1928, Electric shall pay Power each year the following charges in equal monthly instalments:

(1)—12.75% of $193,694.42 being cost to Power as of January 1, 1927, of constructing the above mentioned 60 cycle transmission line	$24,696.04
(2)—10/90ths of $42,709.68 being the average annual cost of operation and maintenance of Power's transmission lines from Holtwood to Baltimore during the five years ending with 1926	4,745.52
Annual Charge	$29,441.56
Monthly Instalment	2,453.46

The amount of this annual charge shall remain unchanged during the term of this agreement, except under the following conditions:

(a)—If additional investment becomes necessary, or is incurred by Power at the request of Electric, for the purpose of modifying, improving or extending the property or equipment in connection with this transmission service; the annual payment shall then be increased by an amount equal to 12.75% on such additional investment cost.

(b)—In the event that Power desires to use for its own transmission purposes a portion of the above mentioned transmission line and equipment which originally had been provided exclusively for Electric's transmission service, the fixed charges on the total investment shall be prorated between Electric and Power in proportion to the use made of the facilities by Electric and Power. Thus, for example, if Power decides to string a second circuit on the tower structures between Philadelphia Road Substation and Gunpowder Falls to be employed exclusively for Power's own transmission purposes, the sum of the cost of the said transmission line and equipment ($193,694.42 plus cost of additions made under paragraph (a)), plus the cost of erecting the second circuit for Power's purposes shall be divided into halves and Electric shall pay Power annual fixed charges at the rate of 12.75% on one-half of this total investment.

[25407] (page 22)

(c)—In the event that actual developments in the future, such as improvements or extensions to the property and equipment provided by Power for Electric's transmission service, abandonments, or other conditions, should cause the originally established payment for operation and maintenance, based on the ratio of 10/90ths of total cost of Holtwood-Baltimore line operation and maintenance (representing the ratio of lengths of tower lines) to appear either excessive or inadequate by reason of improvements and extensions to equipment, or as a result of material changes in basic cost of labor and material, or in consequence of more costly requirements of service for Electric, or for other reasons, the two parties hereto

shall agree on a new apportionment of total actual cost of Holtwood-Baltimore transmission line operation and maintenance of future years in a manner that will thereafter allocate to each party a fair share of costs, corresponding to the use made of and the services rendered by these facilities.

[25408] (page 23)

EXHIBIT "D".

The purpose of this Exhibit is to set forth in greater detail the conditions referred to in Article 5 (c) of the agreement, governing the supply of power and energy to Electric at or near Havre de Grace.

Power, upon request of Electric, will construct, operate and maintain a transmission line from Holtwood to Havre de Grace.

Power now has available at or near the Holtwood Plant 13,200 and 33,000 volt switching equipment, two transformer banks totalling 8,000 K. V. A. capacity, a 33,000 volt river crossing, certain rights-of-way, etc., which may be used in whole or in part for the transmission of power and energy to Havre de Grace. Power will hold these facilities for such use until May 1st, 1928, and Electric will advise Power on or before that date whether it desires Power to construct a transmission line to Havre de Grace.

If the said transmission line is constructed, Electric shall pay Power each year the following charges in equal monthly instalments:

(1) A fixed charge at the rate of 12.75% of the cost of the transmission line, tie-in equipment, etc., but the switching equipment, transformer bank, river crossing, rights-of-way, etc., mentioned in the preceding paragraph shall not be included in said cost, it being agreed that Electric shall have the use of said equipment and facilities free of cost.

(2) The additional costs incurred by Power for the operation and maintenance of facilities now owned or hereafter installed by Power in connection with the supplying of power and energy to Havre de Grace.

In the event that Power should employ for its own transmission services a portion of the property, transmission line or equipment that Power may provide at Elec-

tric's request for service to Havre de Grace (in addition to the facilities now owned by Power), the annual fixed charges of 12.75% and the cost of operation and maintenance shall be apportioned in a fair ratio between Power and Electric, following the general principle governing the apportionment of such charges in connection with transmission service between Philadelphia Road and Gunpowder as covered by Exhibit "C."

Power and energy delivered at Havre de Grace shall be metered and billed on the low tension side of the main step-down transformers at Havre de Grace as a portion of the supply contracted for under this agreement, except that if such supply to Havre de Grace should make it necessary for Power to incur investment costs for which Electric is not obligated to pay the carrying charges as provided above, then the supply to Havre de Grace shall be treated separately as agreed upon by the two parties, but the unit rates for power and energy specified in Article 7 shall not be changed.

[25409] (page 24)

EXHIBIT "E".

Metering and Adjustment of Bills

There shall be installed at points of delivery standard watthour meters to be known as billing meters and such other meters known as check meters as may be mutually agreed upon by the parties concerned.

Routine calibration tests of billing and check meters shall be made in the presence of representatives of both parties at least once in every twelve months, or at such shorter intervals as may be mutually agreed upon. In addition to these routine tests, in case either party at any time believes that any billing meter equipment registers incorrectly, it shall have the right to make or have made a special test on such equipment, using methods mutually acceptable and making such tests in the presence of representatives of the other party. After every test the meters shall be adjusted to read with as near absolute accuracy as possible within the then prevailing range of use, allowing for inaccuracies in the instrument transformers as determined by tests. Calibration of the ratio of instrument transformers, which involves considerable expense, shall be made only as found necessary.

Any meter equipment shall be considered accurate for billing purposes if, as the result of tests, the weighted average error above or below accuracy is found to be not greater than two (2) per cent. The calibration points (selected according to the prevailing range of use) and the method of weighting the results are to be agreed upon before the test by the parties concerned.

If the weighted average error of any billing meter equipment is found to be greater than two (2) per cent., but the error of the check meter is two (2) per cent. or less, the consumption since the last monthly reading preceding request for test shall be billed according to the registration

of the check meter. If both billing and check meters are found to be more than two (2) per cent. inaccurate, the probable consumption since the last monthly reading preceding the request for test shall be estimated and paid for as may be agreed upon between the parties. In no case shall any correction whatever on account of inaccuracy of metering equipment extend back beyond thirty days prior to the day of request for test, or beyond the last preceding test in case this was within the thirty-day period.

[25410] (page 25)

SUPPLEMENTAL AGREEMENT

THIS SUPPLEMENTAL AGREEMENT made this 27th day of December, 1928, between CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a corporation of the State of Maryland, hereinafter called "Electric", and PENNSYLVANIA WATER AND POWER COMPANY, a corporation of the State of Pennsylvania, hereinafter called "Power".

WHEREAS, by an agreement between Electric and Power made as of the 31st day of December, 1927, Power agreed to supply electrical energy to Electric until December 31, 1970; and

WHEREAS, it was provided in the first paragraph of Exhibit "B" attached to and forming part of said agreement that "Power hereby agrees to sell and Electric agrees to purchase January 1st, 1929, for the nominal consideration of $1.00, Power's underground cable system between Highlandtown Substation and Pratt Street Station. After said date Electric shall operate and maintain said cable system. The initially agreed to total annual rental for substation service shall therefore be $82,023.42, payable in equal monthly instalments of $6,835.285 each."; and

WHEREAS, the parties hereto have mutually agreed to change said provision.

NOW, THEREFORE, THIS AGREEMENT WITNESSETH: That for and in consideration of the sum of Five Dollars ($5.00) and other valuable considerations paid by each of the parties hereto to the other, receipt whereof is hereby acknowledged, it is agreed as follows:

1. That the aforesaid provision of Exhibit "B" shall be stricken out and the following inserted in lieu thereof;—

"Electric agrees to purchase December 31st, 1928, from Power's subsidiary (Susquehanna Transmission Company

of Maryland) for the consideration of $105,935.69 (cable investment of $146,930.00 less $40,994.31 depreciation) the [25411] (page 26) underground cable system between Highlandtown Substation and Pratt Street Station. After said date Electric shall operate and maintain said cable system. The initially agreed to total annual rental for substation service shall therefore be $82,023.42, payable in equal monthly instalments of $6,835.285 each, but for the year 1929 and subsequent years shall be reduced by 12.75% of $105,935.69, thus making the annual rental $68,516.62, payable in equal monthly instalments of $5,709.718."

2. That on and after December 31st, 1928, the electrical energy delivered by Power to Electric and carried over the above mentioned underground cable system to the Pratt Street Station shall be metered as heretofore at said Station.

IN WITNESS WHEREOF the parties hereto have caused this agreement to be executed in duplicate by their duly authorized officers and to be sealed with their respective corporate seals, attested by their respective secretaries.

[25412] (page 27)

SUPPLEMENTAL AGREEMENT.

THIS SUPPLEMENTAL AGREEMENT made as of the 1st day of June, 1931, between CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a corporation of the State of Maryland, hereinafter called "Electric," and PENNSYLVANIA WATER AND POWER COMPANY, a corporation of the State of Pennsylvania, hereinafter called "Power."

WHEREAS an agreement has been made between Power and Electric dated December 31, 1927, and terminating December 31, 1970, providing among other things that the investment programs of said companies for additional generating and transmission facilities shall be co-ordinated well in advance to the greatest benefit to the parties and to the public service by them; and

WHEREAS in accordance with this intent of said agreement, Power and Electric have made an agreement of even date herewith, terminating April 22, 1980, with Safe Harbor Water Power Corporation, a corporation of the State of Pennsylvania, hereinafter called Safe Harbor, for the transmission and purchase of electrical power and energy, by Power one-third, and by Electric two-thirds, of the electrical output of the initial development of a hydroelectric project of Safe Harbor, known as the Safe Harbor Development, whereby the operation of the hydroelectric and steam-electric generating plants of Power at Holtwood, Pennsylvania, and of the Safe Harbor Development, will be so co-ordinated that the greatest possible combined amount of power and energy will be derived therefrom; and

WHEREAS determination of the relative pecuniary rights and obligations of Electric and Power under said two [25413] (page 28) agreements is difficult and expensive, and likely to become increasingly so, and is not conducive to the

most effective utilization of output, and co-ordination in operation, of the two plants; and more complete co-ordination can be attained and greater economies effected by the sale to Electric of all of Power's electrical power and energy (including that to be purchased from Safe Harbor) available for such sale, and by payment therefor on the basis of an annual charge, (instead of unit rates for power and energy), which together with payments from other customers is expected to yield to Power approximately the same net power revenue now received by Power from all its customers, including Electric, plus a reasonable income on any additional investments hereafter made by Power to serve any customers.

NOW, THEREFORE, THIS AGREEMENT WITNESSETH: That for and in consideration of the mutual covenants and agreements hereinafter contained and the sum of five dollars ($5.00) paid by each of the parties hereto to the other, receipt whereof is hereby acknowledged, and of other valuable considerations, Electric and Power do covenant and agree as follows:

ARTICLE I.

This agreement shall become effective as of January 1, 1931, and shall supplement the agreement of December 31, 1927, above referred to, and the general intent of said agreement and all the provisions thereof not inconsistent herewith are hereby reaffirmed. This agreement shall continue in force until midnight of April 22, 1980.

ARTICLE II.

Electric shall be entitled at all times to all the electrical capacity and energy from time to time available to Power at [25414] (page 29) its Holtwood hydroelectric and steam-electric generating plants and from the Safe Harbor Development under the said agreement with Safe Harbor, and not otherwise disposed of in performance of now existing

contracts, new contracts entered into by Power with Electric's approval or any duty or obligation to serve imposed on Power by its charter or otherwise by law.

ARTICLE III.

In payment for all the electrical capacity and energy which Electric receives from Power pursuant to Article II hereof, Electric shall pay annually to Power the following sum of money, which shall be increased and/or decreased from time to time, by order of, or pursuant to determination of unreasonableness thereof by, any regulatory authorities in the exercise of their respective powers and jurisdiction under the laws of Pennsylvania, Maryland and/or the United States to fix reasonable rates, and may be increased and/or decreased by agreement of the parties subject to the regulatory powers of such authorities:

(a) The amount of net power revenue, before interest but after depreciation, that would have accrued to Power in the calendar year 1930 had the flow of the Susquehanna River been equal to the 40 year average flow (1891-1930 inclusive) usable by the Holtwood hydroelectric plant of Power. This sum is computed to be approximately, and shall be taken to be, $2,832,259.75, as shown in Exhibit "A" attached hereto. If, however, there is a decrease during the year 1931 in the income accrued to Power from all of its customers other than Electric for the sale of electrical and hydraulic power and energy, below the corresponding income accrued in 1930, then the sum of $2,832,259.75 shall be reduced by such decrease, and the resulting decreased amount shall be the amount that Electric shall pay to [25415] (page 30) Power under this subparagraph (a); provided, however, if the average income so accrued to Power from its customers other than Electric during the years 1931 to 1933, inclusive, be greater than the corresponding income accrued in 1930, then for the year 1933 and thereafter Electric shall pay to Power the sum of $2,832,259.75.

The sum of $2,832,259.75 is computed after an allowance of $355,146.73 for renewals and replacements. Subject to the determinations, from time to time, of any regulatory authorities acting within their respective powers and jurisdiction under the laws of Pennsylvania, Maryland and/or the United States, Power may appropriate at least this allowance (plus an appropriation in respect of net additions referred to in paragraph (b) of this Article III) each year to its reserve for these purposes, which was $2,875,440.89 as of December 31, 1930; provided, however, that (subject as aforesaid) said reserve shall never at any time amount to more than 15 per cent. of the book value (or the fair value which may be determined from time to time by any such regulatory authorities in the exercise of their respective powers and jurisdiction) of the plant, power development, transmission lines and other property used by Power and its subsidiaries in the generation and transmission of electrical power and energy; the allowance of $355,146.73 shall be reduced whenever necessary so that the reserve shall not exceed this amount.

(b) The sum of twelve monthly amounts, computed at the end of each month, equal to 10.25 per cent. per annum of the cost of net additions, after December 31, 1930, on the books of Power and its subsidiaries, to investment in plant, power development, transmission lines and like property, by Power and by subsidiaries engaged in the generation and transmission of electrical power and energy, or businesses incidental thereto. The amount mentioned in this paragraph (b) shall not be based on any additions included in the basis of similar [25416] (page 31) computation under Article VII of the agreement between Safe Harbor and the parties hereto.

(c) An amount equal to all reasonable operating expenses accrued during the calendar year, including maintenance and general expenses, insurance and taxes, and a reasonable allowance (above referred to) for renewals and replacements (which shall be regarded as including provision for depreciation) of property other than net additions referred to in paragraph (b) of this Article III, in the operation of generating plants, interconnected transmission systems, and all facilities appurtenant thereto.

(d) An amount equal to the actual payments made by Power, or accrued, during the calendar year for electrical power and energy obtained from Safe Harbor and/or from other sellers with whom Power may now have contracts for the purchase of electrical power and energy, or may hereafter contract for such purchase with the approval of Electric.

(e) From the sum of the amounts mentioned in paragraphs (a), (b), (c) and (d) hereof, there shall be deducted, in determining the sum to be paid by Electric to Power, the amounts accrued during the calendar year to Power from its customers and/or contracting parties other than Electric, for the sale to them by Power of electrical and hydraulic power and energy and for the lease to and/or use by them of real estate, riparian property and privileges, generation, transmission and other facilities owned and/or controlled by Power, for the purpose, either direct or indirect, of generating, transmitting, distributing, and/or exchanging electrical and hydraulic power and energy.

(f) From the sum of the amounts aforesaid there shall also be deducted a reasonable credit on account of (1) increase at the end of the year in net reserve for depreciation or renewals (whether in respect of additions after December 31, 1930, or of property already [25417] (page 32) owned on December 31,

1930) over and above the net amount of said reserve on December 31, 1930, and/or (2) other decrease, (*e.g.*, through sale or retirement), in book cost, less such reserve, of property owned on December 31, 1930.

(g) Electric estimates that its sales of electrical energy, other than energy for railroad electrification purposes, during the years 1932 to 1937 will be not less than the amounts set up in the following schedule:—

Year	*Sales in million k.w.h.*
1932	905
1933	943
1934	984
1935	1024
1936	1065
1937	1106

A charge shall be set up by Electric against Power for each of the above years in the following amount:

1932	$175,000
1933	200,000
1934	225,000
1935	250,000
1936	287,400
1937	287,400

Against the said charge there shall be credited in each of said years—

1—Six dollars and sixty-three cents per meg.w.h. for all sales of energy by Electric, (other than for railroad electrification), in excess of the amounts specified in the above schedule.

2—One mill per k.w.h. for all sales of energy by Electric for railroad electrification purposes.

[25418] (page 33) If the credits are less than the charge in any year, Power shall pay the deficiency to Electric, but if the credits are more than the charge,

Electric shall pay the excess to Power, provided, however, that the total of such excess payments by Electric for the six year period ending December 31, 1937, shall not exceed the total of such deficiency payments by Power to Electric.

[*For paragraph (h) see supplemental agreement of September 29, 1939.*]

The net sum of the above amounts to be paid annually by Electric to Power shall be estimated by the parties hereto in advance, and shall be paid as nearly as possible in equal monthly installments, the payment for any month to be made not later than the fifteenth day of the next succeeding month, with subsequent adjustment to the correct yearly payment.

ARTICLE IV.

So far as possible consistently with the performance of any duty or obligation to serve imposed on Power by its charter or otherwise by law, Power shall obtain the approval of Electric before entering into any agreement or agreements with any other person or corporation for the sale and/or purchase and/or interchange of electrical and hydraulic power and energy, or before making any substantial modifications in the existing contracts now in force between Power and its customers other than Electric.

ARTICLE V.

So far as possible consistently with the performance of any duty or obligation aforesaid, Power shall obtain the approval of Electric (1) before incurring any single commitment for investment (except for renewals or replacements) in excess of $50,000.00 on the basis of which Electric shall make payment under Article III (b) hereof, and (2) before alienating or disposing of in any one year any property, [25419] (page 34) plant, or equipment, other than stores and construction equipment, having a total

value in excess of $50,000.00 and included in the investments of Power and/or subsidiaries of Power in plant, property or power development devoted to the generation, transmission, or distribution of electrical power and energy.

ARTICLE VI.

Power shall at all times as far as practicable keep its equipment in first-class condition in accordance with good engineering practice and shall arrange whenever possible to have all maintenance work in its hydroelectric plant done in the low flow periods. If any equipment by necessity is out of service during high flow, Power shall use every reasonable effort to return equipment to service as quickly as possible, consistent with high standards of operating and maintenance practice.

ARTICLE VII.

If at any time during the continuance of this agreement Power shall be prevented from supplying and Electric from receiving all or any part of the power and energy herein specified, by reason of war, rebellion, civil disturbance, strikes, serious epidemics, major catastrophe, or any other cause of a like nature beyond the control of either party, the obligation of Power to supply and the obligation of Electric to take, power and energy herein specified, shall cease until such time as the party so incapacitated shall, by the exercise of reasonable diligence, be able to resume such supply or use, and a reasonable abatement in the payments by Electric to Power shall be made.

[25420] (page 35)

ARTICLE VIII.

It is the intent among other things of this long term agreement to encourage the maximum cooperative utilization of the power and energy entitlements and resources

and other facilities of the parties hereto to the end that the joint use of their property and equipment shall give the greatest practical benefit to the public, and that all duplication of investment, and all unnecessary operating and maintenance costs, shall be avoided except such as would contribute toward the maintenance and improvement of the high standard of service rendered. The parties hereto shall cooperate to the fullest extent in the selection of the most suitable equipment, in the co-ordination of their investment programs for additional generating capacity, transmission and tie-in facilities, etc., and shall so conduct their operations that economic interchange of power and energy during the different hours of the day, the seasons of the year, and over more prolonged periods, shall be encouraged in every possible way. For this purpose and to insure that the costs of operation and maintenance, and other current costs, of Power's facilities for the generation and transmission of electrical power and energy, shall be at all times the minimum that is practical in view of the high standard of service rendered, each party shall, within thirty (30) days after the execution of this agreement, appoint one representative to act as its agent for investigation, consultation, and advice in all operating, engineering and accounting matters pertaining to the interconnected facilities herein contemplated, and to the supply and interchange of power and energy herein provided for. Each appointment shall be evidenced by written notice to the other party signed by an executive officer. Either party at any time may change its representative or withhold or withdraw from its representative the authority to act for it in any matters specified in the [25421] (page 36) notice, provided that it designate in such notice other representation in respect to such matters. These representatives, to be known as the Operating Committee, shall confer upon request of either; in case of their inability to agree, the question in dispute shall be submitted to the Presidents of the respective companies for their decision.

ARTICLE IX.

For the purpose of determining the payments to be made by Electric to Power under Article III hereof, Electric shall have complete access to and may audit the accounts of Power at any time.

ARTICLE X.

In case of any dispute arising between the parties to this agreement, the said dispute shall be referred to a Board of Arbitration upon service of written notice by either party to the other.

The said Board of Arbitration shall consist of three members, the first member to be chosen by the party complaining, the second member to be chosen by the other party, and the third member to be chosen by the first and second members. Should the second or third member remain unselected at the expiration of thirty days after notice of arbitration is given, then upon the request of the complaining party, and upon notice thereof having been given to the other party, the second or third member, or both, of the Arbitration Board shall be selected by the then Chief Judge of the Supreme Bench of Baltimore City or, in the event of the said Judge's [25422] (page 37) disinclination or failure to act within thirty days, by the then Chairman of the Public Service Commission of Maryland.

The Board of Arbitrators shall proceed at its earliest convenience to hear and determine the questions at issue after having given each party hereto not less than five days notice of the time and place of the first meeting.

Each party shall be permitted to be represented by counsel before the Board of Arbitrators, and to present in full, by competent witnesses, all facts, figures and statements which might aid the Board of Arbitrators to give a final and fair judgment as to the questions in dispute.

The determination of the Board of Arbitrators, or a majority thereof, shall be made within sixty days after the

submission to said Board, unless prevented by circumstances unforeseen, and the decision of the Board of Arbitrators, or a majority thereof, shall be final and conclusive upon the parties hereto and said parties shall abide by such decision.

All expenses in connection with such arbitration, including a reasonable compensation for the arbitrators, shall be divided equally between the parties, with the exception of expenses of counsel, witnesses and employes of the parties, which expenses shall be borne by the parties incurring them.

All notices herein provided for may be given by serving the same in writing, or by sending the same by registered mail addressed to the party interested at its principal places of business.

IN TESTIMONY WHEREOF each of the parties hereto has caused these presents to be signed in its corporate name by its President or a Vice-President and its corporate seal to be [25423] (page 38) hereunto affixed duly attested by its Secretary or an Assistant Secretary as of the day and year first above written.

[25425] (page 41)

SUPPLEMENTAL AGREEMENT

THIS SUPPLEMENTAL AGREEMENT made as of the 29th day of September, 1939, between CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE, a corporation of the State of Maryland, hereinafter called "Electric," and PENNSYLVANIA WATER & POWER COMPANY, a corporation of the State of Pennsylvania, hereinafter called "Power,"

WHEREAS, the Public Service Commission of Maryland has requested that Electric's rates be reduced and that a substantial portion of such rate reduction be provided for through decrease in Electric's payments to Power, and

WHEREAS, it is desired by both parties to simplify and revise certain provisions of their Supplemental Agreement of June 1, 1931 with respect to annual allowances for renewals and replacements (or depreciation), and

WHEREAS, by incorporating such simplifications and revision of said provisions with modifications of other provisions of said Supplemental Agreement of June 1, 1931, the whole will effect a reduction of total payments by Electric to Power as requested by the Public Service Commission of Maryland.

NOW THEREFORE, the following amendments to the Supplemental Agreement of June 1, 1931 are hereby agreed to, effective December 1, 1939:

(1) The second paragraph of Article III. (a) is amended to read as follows:

The sum of $2,832,259.75 is computed after an allowance of $355,146.73 for renewals and replacements (or depreciation). Subject to the determinations, from

time [25426] (page 42) to time, of any regulatory authorities acting within their respective powers and jurisdiction under the laws of Pennsylvania, Maryland and/or the United States, Power may so appropriate this allowance (plus an appropriation, out of and not in addition to the amounts computed under paragraph (b) of this Article III, in respect of net additions referred to in that paragraph) each year to its reserve for these purposes, which was $2,875,440.89 as of December 31, 1930.

(2) Paragraph (b) of Article III is hereby amended to read as follows:

(b) The sum of twelve monthly amounts, computed at the end of each month, equal to 10.25 per cent. per annum of the cost of net additions after December 31, 1930 to and including December 31, 1938, (not exceeding the cost of all net additions after December 31, 1930), plus 9.5 per cent. per annum of the cost of net additions after December 31, 1938, on the books of Power and its subsidiaries, to investment in plant, power development, transmission lines and like property, by Power and by subsidiaries engaged in the generation and transmission of electrical power and energy, or businesses incidental thereto. The amount mentioned in this paragraph (b) shall not be based on any additions included in the basis of similar computation under Article VII of the agreement between Safe Harbor and the parties hereto, but in such computations under Article VII of said agreement the above mentioned rate of 9.5 per cent. shall be substituted for the rate mentioned in said Article VII with respect to net additions after December 31, 1938 to transmission lines and switching stations.

(3) Immediately after Paragraph (g) of Article III insert the following:

(h) From the net sum of the amounts aforesaid there shall be deducted the sum of $600,000.

[25427] (page 43)

IN TESTIMONY WHEREOF each of the parties hereto has caused these presents to be signed in its corporate name by its President or a Vice-President and its corporate seal to be hereunto affixed, duly attested by its Secretary or an Assistant Secretary as of the day and year first above written.

DOCKET NO. II-...5.9.1.5...

August 30th, 1944

FEDERAL POWER COMMISSION
DOCKETED
AUG 31
DOCUMENT SECTION

Honorable Basil Manly,
Acting Chairman,
Federal Power Commission,
Washington, D. C.

Dear Mr. Chairman:

As you know, this Commission is engaged in an investigation of the rates charged by Consolidated Gas Electric Light and Power Company of Baltimore which receives large quantities of electric energy from Safe Harbor Water Power Corporation and Pennsylvania Water and Power Company.

In considering a motion by People's Counsel that this Commission request the Federal Power Commission to determine the reasonable rates to be charged by these two companies for energy supplied to Maryland, we have first inquired into the preparedness of the two state commissions to exercise the regulation indicated by U. S. Circuit Court of Appeals in Safe Harbor Water Power Corporation v. Federal Power Commission.

While the state commissions are ready to engage in co-operative regulation and the opinion of the Circuit Court indicates state jurisdiction, the public interest demands the procedure which will get results in the shortest possible time and we understand that the Federal Power Commission is prepared to pursue the matter to a conclusion in much less time than probably would be required by state action.

Under the circumstances, this Commission has decided to grant the motion of People's Counsel and hereby requests that the Federal Power Commission proceed to determine the reasonable rates to be charged by Safe Harbor Water Power Corporation and by Pennsylvania Water and Power Company for energy sold to Consolidated Gas Electric Light and Power Company of Baltimore.

At the request of People's Counsel we are forwarding copies of schedules 10 to 13, inclusive of his exhibit No. 1, for your information.

(no enclosures
Mail Room)

Very truly yours,

/s/ Stewart Purnell

Chairman.

ITEM U.

Docket No. IT-5582

1939

BEFORE THE FEDERAL POWER COMMISSION

In re: Application of Pennsylvania Water & Power Company for Commission's approval of the merger of its facilities for the transmission or sale at wholesale of electric energy in interstate commerce with the transmission facilities of the Susquehanna Transmission Company of Pennsylvania, within the meaning of Section 203 of the Federal Power Act.

(Excerpts)

[25524]

* * *

E. That the applicant, Pennsylvania Water & Power Company, is a public utility engaged in the business of generation, purchasing, selling and transmission of electric power and energy at wholesale.

The generating properties of applicant consist of a hydroelectric plant and a steam-electric plant located at Holtwood, Pa., on the Susquehanna River and having a combined capacity of 131,000 Kw. The transmission lines of applicant and its wholly-owned subsidiary transmission companies, Susquehanna Transmission Company of Pennsylvania (a party to this proceeding), Pennsylvania Transmission Company (a party to a companion proceeding) and Susquehanna Transmission Company of Maryland, form a regional power supply system referred to below. The properties of these subsidiary transmission companies are operated under contractual arrangements by applicant.

[25525]

The hydroelectric plant of Safe Harbor Water Power Corporation (a licensee under the Federal Power Act), located about 8 miles above the applicant's generating plants at Holtwood, Pa., has a capacity of 180,000 Kw. and has been tied in with applicant's plants and the steam-electric plants of Consolidated Gas Electric Light and Power Company of Baltimore by transmission lines owned by applicant or its wholly-owned transmission subsidiaries. Power resources of the three companies are thus coordinated and operated as a regional power supply system by means of the transmission lines operated by the applicant for the delivery and interchange of power and energy to the customers of the three companies. Reference is made to a map which is submitted herewith and identified as Exhibit "M".

530. SALES TO OTHER ELECTRIC UTILITIES (Account 605)

1. Report below the information called for concerning sales during year to other electric utilities and to cities or other public authorities for distribution to ultimate consumers.
2. Report separately firm, dump, and other power sold to the same company. Describe the nature of any sales classified as Other Power, column (g).
3. If a fixed number of kilowatts of maximum demand is specified in the power contract as a basis of billing to the customer this number should be shown in column (k). The number of kilowatts of maximum demand to be shown in columns (l) and (m) should be actual based on monthly readings and should be furnished whether or not used in the determination of demand charges. Show in column (n) type of demand reading (instantaneous, 15, 30, or 60 minutes integrated).

A. Summary of Sales According to Companies and Points of Delivery

Line No.	Sales to—	Associated utilities	Nonassociated utilities	Municipalities	Firm power	Dump or surplus power	Other power	Sales within State boundaries	Exports across State lines	Point of delivery (If necessary use an insert page and identify points of delivery by line numbers of this schedule)	KILOWATTS OF DEMAND: Contract demand	Average monthly maximum demand	Annual maximum demand

53	Municipalities	
54	Firm power	
55	Dump or surplus power	
56	Other power	
57	Sales within State boundaries	
58	Exports across State lines (Do not total.)	

Applicant does no retail distribution business. With one exception, all of applicant's power and energy is sold at wholesale to public utility companies, who resell and distribute the same. The public utility companies which applicant so serves are Pennsylvania Power & Light Company for part of its requirements in Lancaster County, Pennsylvania; Edison Light and Power Company of York, Pennsylvania, for part of its requirements in York County, Pennsylvania; Philadelphia Electric Company for part of its requirements in Chester County, Pennsylvania; and Consolidated Gas Electric Light and Power Company of Baltimore for part of its requirements within the State of Maryland. Applicant also has agreements with the Pennsylvania Power & Light Company, the Philadelphia Electric Company and the Metropolitan Edison Company for interchange of economy power and energy.

Applicant sells power and energy to The Pennsylvania Railroad Company at Safe Harbor, Manor Township, Lancaster County, Pennsylvania, which is used by The Pennsylvania Railroad Company for its electrification requirements [25526] on the passenger and freight lines of the present Philadelphia Division between Thorndale, Pennsylvania, and Harrisburg and Enola, Pennsylvania on that section of the Columbia and Port Deposit Railroad between Columbia, Pennsylvania, and the Pennsylvania-Maryland State Line and yards adjacent thereto and supporting these services.

F. That the following table shows descriptive data of the facilities owned and/or operated by applicant for transmission of electric energy in interstate commerce or the sale of electric energy at wholesale in interstate commerce.

K. That the facilities of the Susquehanna Transmission Company of Pennsylvania which are to be merged with the applicant's facilities, consist [25527B] of the Pennsylvania portion of two double circuit steel tower transmission lines extending from Holtwood, Pennsylvania, to points in the State of Maryland. Further particulars concerning these transmission lines are set forth on lines 1 and 2 of the table appearing under Item "F" of this application. These lines are at present used in the transmission of electrical energy generated by applicant and sold to Consolidated Gas Electric Light and Power Company of Baltimore and will be so used after the proposed merger is consummated. These transmission lines constitute all the operating facilities of that company and the attached map, marked Exhibit "M", shows the location of these lines and their interconnection with applicant's facilities.

ITEM V.

Docket No. IT-5583

1939

BEFORE THE FEDERAL POWER COMMISSION

In Re: Application of *Pennsylvania Water & Power Company* for Commission's approval of the merger of its facilities for the transmission or sale at wholesale of electric energy in interstate commerce with the transmission facilities of the *Pennsylvania Transmission Company*, within the meaning of Section 203 of the Federal Power Act.

(Excerpts)

[25528]

To the Federal Power Commission:

The application of Pennsylvania Water & Power Company respectfully represents:

* * *

B. That the applicant was formed under the laws of the Commonwealth of Pennsylvania on January 13, 1910.

That applicant possesses no rights to do business in any State other than Pennsylvania.

* * *

[25529]

E. That the applicant, Pennsylvania Water & Power Company, is a public utility engaged in the business of generating, purchasing, selling and transmission of electric power and energy at wholesale.

The generating properties of applicant consist of a hydroelectric plant and a steam-electric plant located at Holtwood, Pa., on the Susquehanna River and having a combined capacity of 131,000 Kw. The transmission lines of applicant and its wholly-owned subsidiary transmission companies, Susquehanna Transmission Company of Pennsylvania (a party to a companion proceeding), Pennsylvania Transmission Company (a party to this proceeding) and Susquehanna Transmission Company of Maryland, form a regional power supply system referred to below. The properties of these subsidiary transmission companies are operated under contractual arrangements by applicant.

[25530]

The hydroelectric plant of Safe Harbor Water Power Corporation (a licensee under the Federal Power Act), located about 8 miles above the applicant's generating plants at Holtwood, Pa., has a capacity of 180,000 Kw. and has been tied in with applicant's plants and the steam-electric plants of Consolidated Gas Electric Light and Power Company of Baltimore by transmission lines owned by applicant or its wholly-owned transmission subsidiaries.

Power resources of the three companies are thus coordinated and operated as a regional power supply system by means of the transmission lines operated by the applicant for the delivery and interchange of power and energy to the customers of the three companies. Reference is made to a map which is submitted herewith and identified as Exhibit "M".

Applicant does no retail distribution business. With one exception, all of applicant's power and energy is sold at wholesale to public utility companies, who resell and distribute the same. The public utility companies which applicant so serves are Pennsylvania Power & Light Company for part of its requirements in Lancaster County, Pennsylvania; Edison Light and Power Company of York, Pennsylvania, for part of its requirements in York County, Pennsylvania; Philadelphia Electric Company for part of its requirements in Chester County, Pennsylvania; and Consolidated Gas Electric Light and Power Company of Baltimore for part of its requirements within the State of Maryland. Applicant also has agreements with the Pennsylvania Power & Light Company, the Philadelphia Electric Company and the Metropolitan Edison Company for interchange of economy power and energy.

Applicant sells power and energy to The Pennsylvania Railroad Company at Safe Harbor, Manor Township, Lancaster County, Pennsylvania, which is used by The Pennsylvania Railroad Company for its electrification requirements on the passenger and freight lines of the present Philadelphia Division [25531] between Thorndale, Pennsylvania, and Harrisburg and Enola, Pennsylvania, on that section of the Columbia and Port Deposit Railroad between Columbia, Pennsylvania and the Pennsylvania-Maryland State Line and yards adjacent thereto and supporting these services.

F. That the following table shows descriptive data of the facilities owned and/or operated by applicant for transmission of electric energy in interstate commerce or the sale of electric energy at wholesale in interstate commerce:

[25532]

ITEM W.

[25535]

UNITED STATES OF AMERICA
FEDERAL POWER COMMISSION

Commissioners: Clyde L. Seavey, Chairman; Claude L. Draper, Basil Manly, Leland Olds, John W. Scott, not participating.

November 28, 1939

In the Matter of Susquehanna Transmission Company of Pennsylvania and Pennsylvania Water & Power Company	Docket No. IT-5582
Pennsylvania Transmission Company and Pennsylvania Water & Power Company	Docket No. IT-5583

ORDER AUTHORIZING AND APPROVING SALE AND MERGER OF FACILITIES

* * *

[25536] (page 2)

* * *

The Commission *finds* that:

* * *

[25537] (page 3)

(3) Susquehanna Transmission Company of Pennsylvania owns electric facilities, including, among others, two 66 Kv double-circuit transmission lines, approximately 7.75 miles in length, extending from the vicinity of the Holtwood hydroelectric develop-

ment at Holtwood, Pennsylvania, to the Pennsylvania-Maryland State line, which facilities are utilized in the transmission and sale at wholesale of electric energy transmitted between the State of Maryland and the Commonwealth of Pennsylvania, and consumed by persons other than the transmitter at points outside the state from which transmitted; and Susquehanna Transmission Company is, therefore, a public utility within the meaning of Section 203 of the Federal Power Act;

(4) Pennsylvania Transmission Company owns electric facilities including, among others, two 220 Kv single-circuit transmission lines, approximately 15 and 18 miles in length, extending from the vicinity of the Safe Harbor Hydroelectric development at Safe Harbor, Pennsylvania, to the Pennsylvania-Maryland State line, which facilities are utilized in the transmission and sale at wholesale of electric energy transmitted between the State of Maryland and the Commonwealth of Pennsylvania, and consumed by persons other than the transmitter at points outside the state from which transmitted; and Susquehanna Transmission Company is, therefore, a public utility within the meaning of Section 203 of the Federal Power Act;

(5) The electric facilities of Susquehanna Transmission Company and of Pennsylvania Transmission Company are operated and maintained by Pennsylvania Water & Power Company, and constitute integral parts of the transmission system of Pennsylvania Water & Power Company;

(6) Pennsylvania Water & Power Company owns and operates facilities for the generation, transmission and sale of electric energy, and is engaged in the generation, purchase, transmission, and sale at wholesale of electric energy, which electric energy

is transmitted and sold within the Commonwealth of Pennsylvania and between the State of Maryland and the Commonwealth of Pennsylvania;

(7) Pennsylvania Water & Power Company is a public utility within the meaning of Section 203 of the Federal Power Act by reason of ownership and operation of facilities, among others, for the transmission or sale at wholesale of electric energy transmitted from a state and consumed by persons other than the transmitter at points outside the state from which transmitted;

ITEM X.

PENNSYLVANIA WATER & POWER COMPANY
APPLICATION FOR LICENSE
FROM
FEDERAL POWER COMMISSION
FOR
HOLTWOOD PROJECT

May 18, 1942

(Excerpt)

[25540] (page 10)

* * *

Applicant sells power to Consolidated Gas Electric Light and Power Company of Baltimore which serves the Baltimore area and, in turn, sells a substantial amount of power to Potomac Electric Power Company for consumption in the Washington area. Holtwood energy is sold to Philadelphia Electric Company at Coatesville, Pa., and resold by Philadelphia Electric Company to the public. Pennsylvania Power & Light Company purchases Hotwood energy and resells it to the public either in the Lancaster area or in other locations of Pennsylvania Power & Light Company's territory. Edison Light and Power Company and Metropolitan Edison Company purchase Holtwood energy at York for resale [25541] (page 11) to the public in that area and in other parts of Metropolitan Edison Company's territory. Philadelphia Electric Company, Pennsylvania Power & Light Company, and Metropolitan Edison Company, in turn, tie in to the Public Service Electric and Gas Company of New Jersey system.

Holtwood energy is also sold to The Pennsylvania Railroad Company which uses the power in the operation of its electrified lines.

In coordinating the use of Applicant's power generating facilities with other hydro projects and with the steam stations of the various systems to which Applicant's power is supplied, Applicant's interconnecting primary transmission system serves not only as the interconnecting links between Applicant's plants and the various systems served by it, but also as a direct interconnection between the various power systems themselves. The amount and direction of power flow over Applicant's interconnected primary transmission system are determined by system load demands, as well as by river flow, by allocation of load to the various steam stations and by other operating conditions resulting from the most effective utilization of the diversified sources of power tied in to Applicant's interconnected primary transmission system.

(Excerpts)

530. SALES TO OTHER ELECTRIC UTILITIES (Account 605)

1. Report below the information called for concerning sales during year to other electric utilities and to cities or other public authorities for distribution to ultimate consumers.
2. Report separately firm, dump, and other power sold to the same company. Describe the nature of any sales classified as Other Power, column (g).
3. If a fixed number of kilowatts of maximum demand is specified in the power contract as a basis of billing to the customer this number should be shown in column (k). The number of kilowatts of maximum demand to be shown in columns (l) and (m) should be actual based on monthly readings and should be furnished whether or not used in the determination of demand charges. Show in column (n) type of demand reading (instantaneous, 15, 30, or 60 minutes integrated).

ITEM HH.

1945

POWER SYSTEM STATEMENT

From

PENNSYLVANIA WATER & POWER COMPANY

(Including Safe Harbor Water Power Corporation)

LEXINGTON BUILDING, BALTIMORE-3, MARYLAND

Covering

HOLTWOOD-SAFE HARBOR SYSTEM

to the

FEDERAL POWER COMMISSION

(Excerpts)

[25751]

Reference: Schedule 8, Column 4, Lines 12-16, Incl. Page 19

The Respondents, under long-term contracts (copies of which are on file with the Commission) agree to deliver to Consolidated Gas Electric Light and Power Company of Baltimore all power generated at the Safe Harbor hydroelectric development on the Susquehanna River and at the Holtwood hydroelectric and steam electric plants, except such power as may be sold by Pennsylvania Water & Power Company to its other (firm) customers.

The net hourly amounts of kilowatthours shown in column 6, line 14, as actually delivered to Consolidated Gas Electric Light and Power Company of Baltimore, would have been materially increased if the energy available to Baltimore Company had actually been delivered rather than resold in part by Pennsylvania Water & Power Company as economy interchange to others, such interchange sales resulting in a diversion of energy from Baltimore Company.

Similarly, the net hourly amounts of kilowatthours shown in column 5, line 14, as received from Consolidated Gas Electric Light and Power Company of Baltimore, would have been increased.

In actual operating practice, energy is diverted by Respondents and delivered by Pennsylvania Water & Power Company over its northern interconnections to others whenever interchange transactions are practicable and economically justified, i. e., whenever the cost of increased generation at the steam plants on Consolidated Gas Electric Light and Power Company's or Potomac Electric Power Company's systems is lower than the cost of power generation on other plants on the interconnected systems. In the actual accounting for interchange transactions by Pennsylvania Water & Power Company [25752] (page 2) such energy is considered to have come from the Baltimore and/or Washington steam plants. Similarly, Pennsylvania

Water & Power Company purchases interchange power, the effect of which is to reduce steam generation in Baltimore and Washington.

• • •

[25756]

Reference: Schedule 13D Line 21

The portion of the hourly load supplied to the Pennsylvania Railroad *in Maryland* by the respondent for the account of the Consolidated Gas Electric Light and Power Company is not included in this item as hourly load allocations are not measured. The total supply to the Pennsylvania Railroad *in both Maryland and Pennsylvania* is included in Line 23 below.

Reference: Schedule 13E Line 23

This item includes the joint supply to the Pennsylvania Railroad by the respondent and the Consolidated Gas Electric Light and Power Company and also the Holtwood-Safe Harbor System transmission losses and station uses.

Electric Utilities and Licensees

(Classes A and B)

ANNUAL REPORT

of

SAFE HARBOR WATER POWER CORPORATION

Lexington Building, Baltimore, Maryland

to the

FEDERAL POWER COMMISSION

for the

YEAR ENDED DECEMBER 31, 1946

(Excerpts)

525. ELECTRIC OPERATING REVENUES (Account 501)

1. Report below the amount of operating revenue for the year for each prescribed account and the amount of increase or decrease over the preceding year.
2. If increases and decreases are not derived from previously reported figures explain any inconsistencies.
3. Number of customers should be reported on the basis of number of meters, plus number of flat rate accounts, except that where separate meter readings are added for billing purposes, one customer shall be counted for each group of meters so added. The average number of customers means the average of the 12 figures at the close of each month.
4. Unmetered sales should be included below. The details of such sales should be given in a footnote.

Line No.	Account (a)	OPERATING REVENUES: Amount for year (b)	OPERATING REVENUES: Increase or decrease from preceding year (c)	KILOWATT-HOURS SOLD: Amount for year (d)	KILOWATT-HOURS SOLD: Increase or decrease from preceding year (e)	AVERAGE NUMBER OF CUSTOMERS PER MONTH: Number for year (f)	AVERAGE NUMBER OF CUSTOMERS PER MONTH: Increase or decrease from preceding year (g)

530. SALES TO OTHER ELECTRIC UTILITIES (Account 605)

1. Report below the information called for concerning sales during year to other electric utilities and to cities or other public authorities for distribution to ultimate consumers.
2. Report separately firm, dump, and other power sold to the same company. Describe the nature of any sales classified as Other Power, column (g).
3. If a fixed number of kilowatts of maximum demand is specified in the power contract as a basis of billing to the customer this number should be shown in column (k). The number of kilowatts of maximum demand to be shown in columns (l) and (m) should be actual based on monthly readings and should be furnished whether or not used in the determination of demand charges. Show in column (n) type of demand reading (instantaneous, 15, 30, or 60 minutes integrated).

SAFE HARBOR WATER POWER CORPORATION

SALES TO OTHER ELECTRIC UTILITIES (Account 605)

Line 3 - Col. (p)

The energy shown was the metered (net hourly basis) supply by Respondent to the 220,000 volt transmission facilities of Pennsylvania Water & Power Company at Safe Harbor, Pa. for delivery by Pennsylvania Water & Power Company to Consolidated Gas Electric Light and Power Company of Baltimore at or near Baltimore, Maryland, and to the Potomac Electric Power Company near Takoma Park, Maryland for Consolidated Gas Electric Light and Power Company of Baltimore (Such delivery involved transmission losses of 7,041,000 kwh.)

Line 3 - Cols. (s), (t) and (u)

The revenue was independent of the amounts or proportion of electric services supplied. It included compensation in part for Respondent's services to the Pennsylvania Railroad under a contract between The Pennsylvania Railroad Company, Consolidated Gas Electric Light & Power Company of Baltimore, Pennsylvania Water & Power Company, Potomac Electric Power Company and Respondent. It did not include any cost of Pennsylvania Water & Power Company for the transmission facilities used or for the services rendered in connection with the delivery of electric services from Safe Harbor, Pa. to the Consolidated Gas Electric Light and Power Company of Baltimore at or near Baltimore, Maryland and the Potomac Electric Power Company near Takoma Park, Maryland.

Lines 5, 7 and 9 - Col (p)

The energy shown was the metered (net hourly basis) supply by Respondent to Pennsylvania Water & Power Company, in part for its own use and in part for joint services by Respondent and Pennsylvania Water & Power Company under certain power supply contracts (including such services to the Pennsylvania Railroad shown on Page 514 (Schedule 532)).

Lines 5, 7 and 9 - Cols. (s), (t) and (u)

The revenue was independent of the amounts or proportion of electric services supplied. It included compensation for Respondent's services to Pennsylvania Power & Light Company and Philadelphia Electric Company under joint power supply contracts with Pennsylvania Water & Power Company, and in part for Respondent's services to the Pennsylvania Railroad under a contract between The Pennsylvania Railroad Company, Consolidated Gas Electric Light and Power Company of Baltimore, Pennsylvania Water & Power Company, Potomac Electric Power Company, and Respondent.

[25850] Item RR 4-60

530. SALES TO OTHER ELECTRIC UTILITIES (Account 605) — Continued

4. The number of kilowatt-hours sold should be the quantities shown by the bills rendered to the purchasers.
5. Explain any amounts entered in column (s).
6. Provision is made in this schedule for summarizing the sales according to certain statistical classifications. For each of the sales reported designate the several statistical classifications applicable thereto by placing "x's" in the appropriate columns (b) to (i). Each sales item will appear in more than one classification. Summarize the total sales in section B, according to the several statistical classifications.
7. If a contract covers several points of delivery and small amounts of electric energy are delivered at each point, such sales may be grouped.

SAFE HARBOR WATER POWER CORPORATION

532 SALES TO RAILROADS AND RAILWAYS (Account 606)

Line 2 - Col. (d)

The energy shown was supplied jointly by Respondent and Pennsylvania Water & Power Company. This energy was included in the energy shown in Line 9 Col. (p) of Page 513 (Schedule 530).

Line 2 - Cols. (e) and (f)

Respondent received directly no division of the total revenue received by Consolidated Gas Electric Light and Power Company of Baltimore acting for itself and as agent for others including Respondent. Respondent's revenues for such service are included in the amount set forth in Schedule 530. See notes to Lines 3, 5, 7 and 9, Columns (s), (t) and (u) of that Schedule.

552. INTERCHANGE POWER (Account 739)

1. Report below the kilowatt-hours received and delivered during the year and the net charge or credit under interchange power agreements.
2. All interchanges with publicly owned power systems should be classified as municipalities.
3. Explain any amounts entered in column (s).
4. Designate the statistical classifications applicable to each interchange listed, by placing "x's" in the appropriate columns (b) to (h).

577. MONTHLY PEAKS AND OUTPUT

1. Report hereunder the information called for pertaining to simultaneous peaks established monthly (in kilowatts) and monthly output (in kilowatt-hours) for the combined sources of electric energy of respondent.
2. The monthly peak should be the maximum simultaneous load on generating stations and other sources of supply.
3. State type of monthly peak reading (instantaneous, 15, 30, or 60 minutes integrated).
4. The monthly output should correspond with the total energy generated, purchased, and interchanged-in, per line 9 of Schedule 575 above.
5. If the respondent has two or more power systems not physically connected, the information called for below should be furnished for each system.

of

PENNSYLVANIA WATER & POWER COMPANY

Lexington Building, Baltimore, Maryland

to the

FEDERAL POWER COMMISSION

for the

YEAR ENDED DECEMBER 31, 1946

(Excerpts)

325. ELECTRIC OPERATING REVENUES (Account 501)

1. Report below the amount of operating revenue for the year for each prescribed account and the amount of increase or decrease over the preceding year.
2. If increases and decreases are not derived from previously reported figures explain any inconsistencies.
3. Number of customers should be reported on the basis of number of meters, plus number of flat rate accounts, except that where separate meter readings are added for billing purposes, one customer shall be counted for each group of meters so added. The average number of customers means the average of the 12 figures at the close of each month.
4. Unmetered sales should be included below. The details of such sales should be given in a footnote.

Line No.	Account (a)	OPERATING REVENUES Amount for year (b)	OPERATING REVENUES Increase or decrease from preceding year (c)	KILOWATT-HOURS SOLD Amount for year (d)	KILOWATT-HOURS SOLD Increase or decrease from preceding year (e)	AVERAGE NUMBER OF CUSTOMERS PER MONTH Number for year (f)	AVERAGE NUMBER OF CUSTOMERS PER MONTH Increase or decrease from preceding year (g)

See Page 514 (Schedule 532) and notes pertaining to Line 2.

530. SALES TO OTHER ELECTRIC UTILITIES (Account 605)

1. Report below the information called for concerning sales during year to other electric utilities and to cities or other public authorities for distribution to ultimate consumers.
2. Report separately firm, dump, and other power sold to the same company. Describe the nature of any sales classified as Other Power, column (g).
3. If a fixed number of kilowatts of maximum demand is specified in the power contract as a basis of billing to the customer this number should be shown in column (k). The number of kilowatts of maximum demand to be shown in columns (l) and (m) should be actual based on monthly readings and should be furnished whether or not used in the determination of demand charges. Show in column (n) type of demand reading (instantaneous, 15, 30, or 60 minutes integrated).

PENNSYLVANIA WATER & POWER COMPANY 1946

530 - Sales to Other Electric Utilities (Account 605)

Line 3 Col. (p)

This energy was supplied by Respondent to Consolidated Gas Electric Light and Power Company of Baltimore as follows: At Highlandtown Substation, Baltimore, Maryland 376,681,000 kwh.; by the 132,000 volt 25-cycle single phase facilities of Respondent and the Pennsylvania Railroad Company, 14,766,000 kwh.; and by Respondent's 220,000 volt transmission facilities between Safe Harbor, Baltimore and Takoma Park, Maryland, 459,000 kwh. Such supply was in addition to the electric services received by Respondent from Safe Harbor Water Power Corporation for delivery to Consolidated Gas Electric Light and Power Company of Baltimore.

The Respondent, under a long term contract, delivers to Consolidated Gas Electric Light and Power Company of Baltimore all power and energy available to Respondent from its hydro-electric and steam-electric plants and from the Safe Harbor hydroelectric development, except such power and energy as may be furnished to its other customers. The kilowatts shown were the metered (net hourly basis) supplied by Respondent.

Line 3 Cols. (s), (t) and (u)

The revenue was independent of the amount of power and energy supplied by Respondent. It included charges for various special facilities provided for the exclusive or joint use of Baltimore Company; it included compensation for services rendered other than the supply of power and energy from the Holtwood Power Development of Respondent and such revenue also included settlement for Baltimore Company's backfeed services rendered to Respondent. Consequently, any unit average charge (Col. u) is meaningless. The charges for special facilities include the operating and fixed costs of the 220,000 volt transmission system of Respondent and its wholly owned subsidiary between Safe Harbor, Baltimore and Takoma Park; of the 110,000 volt transmission line between Baltimore and Gunpowder Falls, Md.; and of other facilities provided for the exclusive or joint use of Baltimore Company.

The compensation for electric services rendered by Respondent, other than from the Holtwood power plants, included interchange transactions by Respondent with other customers, and in part for Respondent's services to the Pennsylvania Railroad not otherwise compensated for through the divisions of revenue received from Baltimore Company, acting as agent for Respondent and others. (See Note Page 514 (Schedule 532), Line 2, Column (e).)

Line 5 and 7 Col. (p)

The energies shown were supplied jointly by Respondent and Safe Harbor Water Power Corporation under certain power supply contracts.

[25862] Item 55 4670

Penna Wtr & Pwr. Co 1946

513-a

Lines 5 and 7 Cols. (q), (r), (s) and (t)

The revenues shown were received by Respondent acting for itself and as agent for Safe Harbor Water Power Corporation.

331 SALES TO OTHER ELECTRIC UTILITIES (Account 447) — Continued

4. The number of kilowatt-hours sold should be the quantities shown by the bills rendered to the purchasers.
5. Explain any amounts entered in column (a).
6. Provision is made in this schedule for summarizing the sales according to certain statistical classifications. For each of the sales reported designate the several statistical classifications applicable thereto by placing "x's" in the appropriate columns (b) to (i). Each sales item will appear in more than one classification. Summarize the total sales in section B, according to the several statistical classifications.
7. If a contract covers several points of delivery and small amounts of electric energy are delivered at each point, such sales may be grouped.

Item 55

4681

PENNSYLVANIA WATER & POWER COMPANY 1946

532 - Sales to Railroads and Railways (Account 606)

Line 2 Col. (d)

The energy shown was supplied jointly by Respondent and Safe Harbor Water Power Corporation.

Line 2 Cols. (e) and (f)

The revenue shown was Respondent's division of $3,434,731.07 total revenue received from The Pennsylvania Railroad Company by Consolidated Gas Electric Light and Power Company of Baltimore acting for itself and as agent for others including Respondent and Safe Harbor Water Power Corporation. Such division was independent of the actual services supplied (including other services in addition to power and energy) by Respondent and Safe Harbor Water Power Corporation.

551. PURCHASED POWER (Account 738)

1. Report below the information called for concerning power purchased for resale during the year.
2. All purchases from publicly owned power systems should be classified as purchases from municipalities.
3. Report separately firm, dump, and other power purchased from the same company. Describe the nature of any purchases classified as Other Power, column (i).
4. If a fixed number of kilowatts of maximum demand is specified in the power contract as a basis of billing this number should be shown in column (m). The number of kilowatts of maximum demand to be shown in columns (n) and (o) should be actual based on monthly readings and should be furnished whether or not used in the determination of demand charges. Show in column (p) type of demand reading (instantaneous, 15, 30, or 60 minutes integrated).

551 - Purchased Power (Account 738)

[25868]

Item SS

Line 2 Col. (r)

The energy shown was the metered (net hourly basis) supply by Safe Harbor Water Power Corporation to Respondent in part for Respondents own use and in part for joint supply by Respondent and Safe Harbor Water Power Corporation under certain power supply contracts.

Line 2 Cols. (u), (v) and (w)

The payments were independent of the amounts or proportion of electric services received. It included compensation for Safe Harbor Water Power Corporation's services rendered jointly with Respondent to Pennsylvania Power & Light Company and Philadelphia Electric Company under certain power supply contracts and in part for Safe Harbor Water Power Corporation's services rendered jointly with Consolidated Gas Electric Light and Power Company of Baltimore, Potomac Electric Power Company and Respondent to The Pennsylvania Railroad Company.

4676

551. PURCHASED POWER (Account 736) — Continued

5. The number of kilowatt hours purchased should be the quantities shown by the power bills.

6. Explain any amounts entered in column (u).

7. Provision is made in this schedule to summarize power purchases according to certain statistical classifications. For each of the purchases reported, designate the several statistical classifications applicable thereto by placing "x's" in the appropriate columns (b) to (k). Each purchase will appear in more than one classification. In section B summarize the total purchases according to the several statistical classifications.

PENNSYLVANIA WATER & POWER COMPANY 1946

552 - Interchange Power (Account 739)

Line 1 Col. (k)

The energy shown was the metered (net hourly basis) supply to the 220,000 volt system of Respondent at Baltimore and Takoma Park, Maryland, and to the 13,000 volt system at Highlandtown Substation (Baltimore, Md.).

Line 1 Col. (n)
Line 41 Cols. (r) and (t)

The settlement is a part of the consideration shown on Pages 512-513 (Schedule 530) Line 3 Cols. (s) and (t).

Lines 2 and 3 (Note A)

The energy shown was delivered to The Pennsylvania Railroad Company for the account of the Philadelphia Electric Company and the kilowatt-hours reported received were kilowatt-hours delivered to The Pennsylvania Railroad Company by the Philadelphia Electric Company system for the account of the Respondent. Deliveries were not made at a point of connection between the two electric companies but each company delivered at a point on its own system to The Pennsylvania Railroad Company and the power was used by the said railroad on its lines.

Line 4 Col. (k)

The energy shown was sold under a joint power supply contract by Respondent and Safe Harbor Water Power Corporation.

Line 4 Col. (n)

The settlement shown reflects $320,028.21 billed by Respondent acting for itself and as agent for Safe Harbor Water Power Corporation.

Lines 42, 43 and 44 Col. (r)

The amounts shown included charges for other interchange services in addition to charges for interchange energy; the several interchange services are not billed separately.

PENNSYLVANIA WATER & POWER COMPANY 1946

575 - Electric Energy Account

Line 4 Col. (b)

1946 was a year of approximately average river flow. The gross generation of Respondent's hydro plant was approximately 27,400,000 kwh. above that expected with average river flow.

Line 7 Col (b)

See Page 523 (Schedule 551) and notes pertaining to Line 2 Col. (r).

Line 11 Col. (b)

See Pages 512-513 (Schedule 530) and notes pertaining to Lines 5 and 7 Col. (p) and Page 524 (Schedule 532) and notes pertaining to Line 2 Col. (d).

Line 12 Col. (b)

See Page 524 (Schedule 552) and notes pertaining to Line 4 Col. (l).

Lines 24 and 27 Col. (b)

The energy shown does not include 7,041,000 kwh. of transmission losses on Respondent's 220,000 volt transmission system between Safe Harbor, Baltimore and Takoma Park, Maryland resulting from the transmission of electric services by Respondent from Safe Harbor, Pa. to Consolidated Gas Electric Light and Power Company of Baltimore.

Ninth and Hamilton Sts., Allentown, Pennsylvania

to the

FEDERAL POWER COMMISSION

for the

YEAR ENDED DECEMBER 31, 1945

(Excerpts)

551. PURCHASED POWER (Account 736)

1. Report below the information called for concerning power purchased for resale during the year.
2. All purchases from publicly owned power systems should be classified as purchases from municipalities.
3. Report separately firm, dump, and other power purchased from the same company. Describe the nature of any purchases classified as Other Power, column (i).
4. If a fixed number of kilowatts of maximum demand is specified in the power contract as a basis of billing this number should be shown in column (m). The number of kilowatts of maximum demand to be shown in columns (n) and (o) should be actual based on monthly readings and should be furnished whether or not used in the determination of demand charges. Show in column (p) type of demand reading (instantaneous, 15, 30, or 60 minutes integrated).

ITEM AAAA

Docket No. IT-5582

In the Matter of:

SUSQUEHANNA TRANSMISSION COMPANY
OF PENNSYLVANIA

and

PENNSYLVANIA WATER AND POWER COMPANY

Docket No. IT-5583

In the Matter of:

PENNSYLVANIA TRANSMISSION COMPANY

and

PENNSYLVANIA WATER AND POWER COMPANY

Testimony, Pages 65, 77

[26135] (page 65)

JOSEPH U. DIEHL

resumed the stand and testified further as follows:

CROSS-EXAMINATION (Continued).

By MR. WHITTLESEY:

* * *

[26137] (page 77)

* * *

Q. May I ask what were the reasons for the change in the depreciation policy of the company that you mentioned took place in 1931?

A. Well, I do not know as I can answer your question specifically. I think perhaps another witness from the company can best explain that answer, explain the answer to your question.

Q. Perhaps then you might be able to tell us this: Is the present depreciation policy actually designed to provide for depreciation on an age-life basis?

A. It would seem to have the same effect. That is, we are using a composite rate on the additions since 1931. That might be said to be tantamount to the assignment of lives to each class of property.

* * *

ITEM CCCC.

In the Matter of:

SAFE HARBOR WATER POWER CORPORATION

Docket IT-5914,

Testimony, Page 60

Witness: John A. Walls

[26153] (page 60)

* * *

Even if the metering and classification of power and energy could be carried out, any power and energy schedules, with fixed unit rates, which might be designed would fail to be equitable to all three companies under varying conditions, would interfere seriously with the economy of system operation and dispatching of water and of electric power, would prevent the best utilization of the available water power, lead to endless disputes, and by increasing the combined system operating cost would finally be reflected in higher rates to the ultimate consumers.

On the other hand, under the type of power contract now in effect, the operations of the several generating plants are coordinated for maximum system economy. This often actually results in a reduction of the efficiency and output of the hydro plants for the benefit of the steam plants. Likewise, generation may be shifted from Holtwood to Safe Harbor or vice versa, and the pondages may be controlled as justified without thought of intercompany charges.

* * *

ITEM DDDD.

In the Matter of:

SAFE HARBOR WATER POWER CORPORATION

Docket IT-5914

EXHIBITS NOS. 182, 183

EXHIBIT No. 182.

[26154]

Mar 28, 1940

Safe Harbor Water Power Corporation
Baltimore, Maryland

Gentlemen:

Your report of Interstate Electric Transactions on FPC Form No. 88, for the period ending December 31, 1939, did not contain the transactions under the following rate schedules:

F. P. C. No. 1—Pennsylvania Water & Power Co., etc.
F. P. C. No. 2—Consolidated Gas Elec. Light & Pwr. Co.
F. P. C. No. 3—Pennsylvania Water & Power Co.
F. P. C. No. 4—Philadelphia Electric Co., etc.

It is requested that a report of transactions under the above be submitted as soon as possible. If there were none, please report accordingly.

Very truly yours,

LEON M. FUQUAY
Secretary.

EXHIBIT No. 183.

[26155]

SAFE HARBOR WATER POWER CORPORATION
Lexington Building
Baltimore, Maryland

April 2, 1940

Federal Power Commission
Washington, D. C.

Attention: Mr. Leon M. Fuquay, Secretary.

Gentlemen:

In reply to your inquiry of March 28, 1940, regarding Report of Interstate Electric Transactions on FPC Form No 88 for the 6-months period ending December 31, 1939 under rate schedules

FPC No. 1; Safe Harbor Water Power Corporation—Pennsylvania Water & Power Company and Consolidated Gas Electric Light and Power Company of Baltimore

FPC No. 2; Safe Harbor Water Power Corporation, Pennsylvania Water & Power Company and Consolidated Gas Electric Light and Power Company of Baltimore—Pennsylvania Railroad Company

FPC No. 3; Safe Harbor Water Power Corporation, Pennsylvania Water & Power Company—Pennsylvania Power & Light Company at Lancaster

FPC No. 4; Safe Harbor Water Power Corporation, Pennsylvania Water & Power Company—Philadelphia Electric Company at Coatesville

the following is submitted.

This Company sells its entire output to the Consolidated Gas Electric Light and Power Company of Baltimore and the Pennsylvania Water & Power Company under rate schedule FPC No. 1. The energy sold to the Baltimore Company was reported on Form No. 88 which accompanied our letter of February 15; this transaction was under rate schedule FPC No. 1. You are now asking, as we understand your letter, what part of the energy sold by this Company to the Pennsylvania Water & Power Company under rate schedule FPC No. 1 entered interstate transmission. It is physically impossible to determine that point for the reason that the Pennsylvania Water & Power Company has customers in both Pennsylvania and Maryland and the energy from the generating plants of the two companies is co-mingled.

As to rate schedule FPC No. 2, although this Company is a party to the contract between the Consolidated Gas Electric Light and Power Company of Baltimore, the Pennsylvania Water & Power Company, and the Pennsylvania Railroad Company, it does not sell any energy under this contract, because as noted in the [26156] (Folio 2) preceding paragraph all of the Company's output is sold under rate schedule FPC No. 1 to the Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water & Power Company. Therefore, there are no transactions by this Company under rate schedule FPC No. 2.

With respect to rate schedules FPC Nos. 3 and 4; it is also true that this Company is a party to these contracts, but for the reason noted above there are no transactions by this Company under these rate schedules.

Yours very truly,

/s/ Jas. L. Rintoul
Jas. L. Rintoul
Treasurer

ANNUAL REPORT

of

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE

Lexington Building, Baltimore, Maryland

to the

FEDERAL POWER COMMISSION

for the

YEAR ENDED DECEMBER 31, 1946

(Excerpts)

274. ACCRUED AND PREPAID TAXES

1. This schedule is intended to give particulars of the combined prepaid and accrued tax accounts and to show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the material on which the tax was levied was charged.

2. Taxes paid during the year and charged direct to final accounts, that is, not charged to prepaid or accrued taxes, should be included in the schedule. Enter the amounts both in columns (d) and (e). The balancing of the schedule is not affected by the inclusion of these taxes.

3. Taxes charged during the year, column (d), includes taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b) amounts credited to prepaid taxes for proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.

4. The aggregate of each kind of tax should be listed under the appropriate heading of "Federal", "State", and "Local" in such manner that the total tax for each State and for all subdivisions can readily be ascertained.

5. If any tax covers more than 1 year, each year should be shown separately.

6. Enter all adjustments of the accrued and prepaid tax accounts in column (f) and explain each adjustment. Designate debit adjustments by red figures or appropriate symbol.

7. See schedule 420 for a distribution of taxes charged, column (d), according to utility departments and accounts.

579. GENERATING STATION STATISTICS

1. If any plant is a leased plant, or is operated under a license from the Federal Power Commission, or is operated as a joint facility, indicate such facts by the use of asterisks and footnotes.
2. Specify if total plant capacity is reported in kva instead of kilowatts as called for on line 4.
3. If peak demand for 60 minutes is not available, give that which is available, specifying period.
4. The total plant hours shown on line 10 should equal 8,760 or 8,784 depending upon the number of days in the year.
5. If a group of employees attends more than one generating station, report on line 11 the approximate average number of employees assignable to each station.
6. If gas is used and purchased on a therm basis, the B. t. u. content of the gas should be given and the quantity of fuel consumed converted to M cu. ft.
7. Quantities of fuel consumed and average cost per unit of fuel consumed should be consistent with charges to expense accounts 703 and 729 as shown on line 24.
8. The items under cost of plant and production expenses represent accounts or combinations of accounts prescribed by the Uniform System of Accounts. Production expenses, however, do not include purchased power, interchange power, other expenses, and joint expenses—debit and credit classified as "Other Production Expenses and Credits" in the Uniform System of Accounts.
9. If any plant is equipped with combinations of steam, hydro, and combustion engine equipment, each should be reported as a separate plant.

See Page 532A for notes.

[26160]

Item EEEE

NOTES APPLICABLE TO SCHEDULE 579 - GENERATING STATION STATISTICS

(A) The capability of this plant for electric generating purposes is limited at times by the requirements for steam from the boilers for use in the Respondent's steam heating operations. No investment in this plant is reflected in the Respondent's Electric Plant Accounts, the generating unit having been written off and the boilers and equipment accessory thereto transferred to Steam Heating Plant Accounts.

(B) Represents the cost included in Account 100.1 for these properties; does not represent total book costs of these facilities since amounts in Account 100.5 are not included herein.

(C) Includes 1,489,138 gallons of fuel oil equivalent to 7,846.59 net tons of coal used for incidental purposes, such as starting boilers, etc., and during the coal strike at the end of 1946.

(D) Includes 1,401,625 cu.ft. of oil refinery gas equivalent to 90.86 net tons of coal and 620,266 cu.ft. of manufactured gas equivalent to 11.99 net tons of coal used for incidental purposes, such as starting boilers, etc.

(E) Includes 1,239,942 gallons of fuel oil equivalent to 6,584.42 net tons of coal used for incidental purposes, such as starting boilers, etc., and during the coal strike at the end of 1946.

(F) Includes certain employees whose time is applicable to all stations, but it is not feasible to allocate these employees among the individual stations.

[1] When energy is drawn from storage, show as a positive quantity. When energy is stored, show as a negative quantity in parenthesis.

[2] Change in storage based on entry in column 3.

[3] One megawatt equals 1,000 kilowatts.

NOTE.—The method or basis used in determining the above data for adverse flow and average or median flow conditions should be explained in accordance with instructions 2 and 3 of this schedule.

Notes:

[26171] Item IIII 4715

NOTES TO SCHEDULE 2

The Holtwood and Safe Harbor hydroelectric developments of Respondents are predominantly run-of-river plants but have about 6,000,000 kilowatthours of usable storage at Holtwood and Safe Harbor for regulation on a daily, weekly, or longer basis when low river flows are experienced coincident with peak load periods.

The amounts shown in Columns 3, 4 and 5 are energies for periods of one week, except for the months of March, April and May, which are energies for periods of one day.

The amounts shown in Column 9 for both "most adverse flow conditions" and "median flow conditions", which column is headed "Dependable Capacity", are based on loads estimated for the year 1947 and are the one-hour integrated load carrying capabilities of the system hydro plants for the specified river flow conditions, assuming that the most critical monthly load conditions coincide therewith and storage of various amounts is used for periods of one week during the different months as shown in Column 3. These amounts in Column 9 are not "dependable hydro capacity" in the sense of the installed "dependable steam capacity" replaced on the system by the hydro plants, which amount is that shown as Item 1(b) of Schedule 16 hereof.

Schedule 2—Continued

SYSTEM HYDROELECTRIC DATA—Continued

1. The data to be reported in Part A of Schedule 2 are intended to present a realistic picture of the potential energy and capacity of system hydroelectric plants under the specified flow conditions. The data to be reported should be based upon an assumed schedule of system operation that would permit serving the maximum possible annual system load with existing facilities and arrangements for purchase or sale of firm power, assuming a continuance of the relative seasonal and hourly variations of load that occurred during the year of this report. Contracts for purchase or interchange of off-peak energy also may be taken into account. In determining the magnitude of the seasonal load that could be carried by the system and the necessary scheduling of system operations, provisions for necessary maintenance scheduling and reserve capacity to be supplied by own system should be taken into account. Explanatory notes relative to Schedule 16 should be referred to in connection with this schedule. If the seasonal and hourly variations in load are expected to change materially, the information given may be based on the expected load shape, explaining in a footnote.

2. The information to be reported under adverse flow conditions should, in general, be based on stream flows equivalent to the year giving the most adverse flow conditions of record during the critical period of system operation. Where stream-flow records indicate that the most adverse flows are not likely to occur except at long intervals of time and are likely to be of a very short duration, the figures used in determining the capacity and energy available from hydro plants may be modified, treating such abnormal limitations as emergency conditions to be covered by the reserve capacity; such modifications, however, should be fully explained. Any system which maintains comparable data based on flows during a year which would give the minimum potential annual output, or based on minimum flow or output for each month, may report on whichever basis it believes will present the most realistic condition for its system. The basis of reporting should be fully explained in the space provided for notes with addenda sheets if needed.

3. Information to be reported under average or median flow conditions may be made on the assumption of the recurrence of flows equivalent to a year which would give the average annual potential output or may be based on median flow or output for each month, or average flow or output for each month, whichever it is believed will present the most realistic condition for its system. The basis of reporting should be fully explained in footnotes or addenda sheets.

4. "Run-of-river" refers to those plants whose operation cannot be regulated over a period of more than a few hours, either from storage at site or above, but whose operation is, in general, controlled by the volume of flow which must be utilized as it occurs or be wasted.

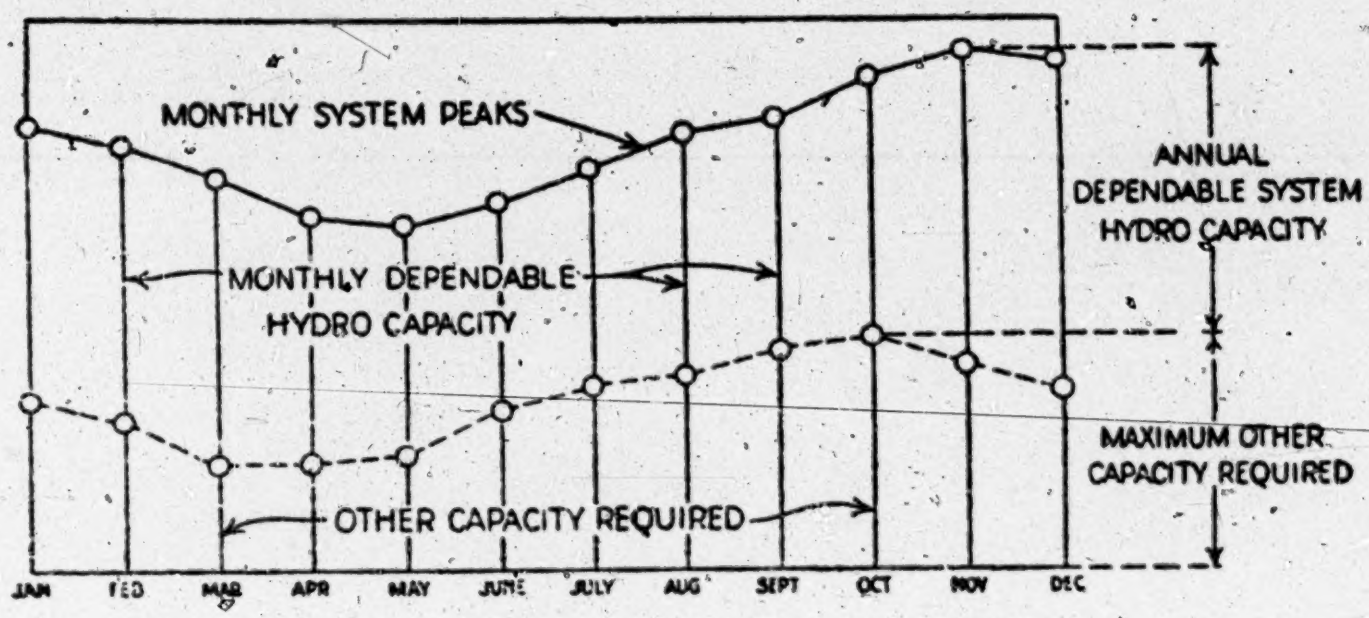
"Storage" refers to those plants whose operations can be varied as desired because of storage at site or above. This regulation may be weekly, monthly, or seasonal.

"Total available energy" refers to the maximum potential output of the existing hydro-generating facilities on the basis of the regulated stream flow, regardless of whether such output can be fully utilized in serving system load or by transfer to other systems. The monthly distribution of storage energy should be such as to permit the serving of the maximum annual peak load under the conditions outlined in instruction 1. However, where required releases for irrigation, navigation, flood control, and other water-use are controlling, the monthly distribution of available energy should reflect the effect of such requirements and full explanation should be given in footnotes.

"Capability" in any month is the machine capability under the most adverse conditions to be expected in that month under the assumed flow conditions without respect to the energy available or the characteristics of the load to be served other than the power factor conditions normally to be expected.

"Dependable capacity" in any month is that capacity that can be relied upon for serving system load and firm power commitments on the basis of the energy available in that month and its use as limited by the characteristics of the load to be served.

5. Dependable hydroelectric capacity as used in this power system statement is intended to be the capacity value of the system hydroelectric plants in serving, together with the other available system capacity, the maximum annual system peak load under the conditions given in instruction 1. For any specified period it represents, on the basis of complete utilization of available storage energy over the critical flow periods, the difference between the peak load for that period and the maximum other capacity required. Where a portion of storage energy is scheduled to be held as a reserve for emergency use only, the dependable capacity should also include the reserve capacity value of such energy reserve. The dependable hydroelectric capacity shown in column 9 under adverse flow conditions for the month of annual peak demand may not necessarily be the same as the annual dependable hydroelectric capacity to be reported in schedule 16, as the annual peak demand may not occur in the month requiring the maximum capacity from other than system hydro-electric plants. This is illustrated by the following graph:



[26173] Item IIII 4717

SYSTEM HYDROELECTRIC DATA—Continued

INSTRUCTIONS FOR PARTS B AND C

1. All the data requested on this page should be furnished for reservoirs and plants which were:
   (a) Constructed, purchased, or leased, and placed in operation by the respondent during the year, or,
   (b) Operated by the respondent prior to the year covered by this statement but not reported to this Commission in the form prescribed below.

2. Revised data for the appropriate items should be furnished if changes have been made in the installed capacity or design of hydro plants, in available storage, or in "operating rule curves" during the year or the data have not been reported in the prescribed form.

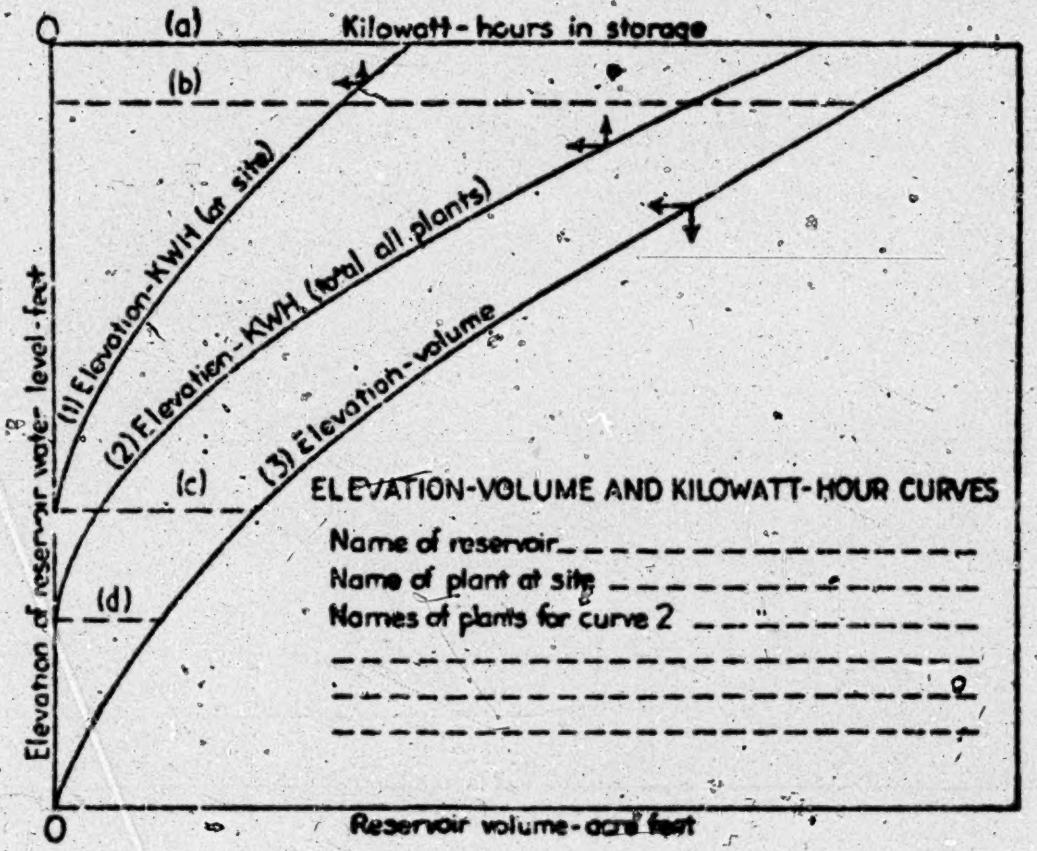
3. For those reservoirs and plants in which no physical change or revision in operating practice has occurred affecting the data previously reported, list on an addenda sheet each reservoir and plant name and the year in which the information was furnished together with the notation "correct as of December 31, 1946."

B. Storage Reservoirs.

1. Furnish "Elevation—Volume" and "Elevation-Kilowatt-hour" curves for each storage reservoir on the system that can provide monthly or seasonal storage. A form for showing these data is illustrated in the accompanying sketch.

2. In addition to the foregoing curves, show (a) the maximum water level without spill (to be furnished for operation without and with flash boards if used), and (b) the maximum water level at which the reservoir is normally carried; (c) the minimum water level of the reservoir for plant operation at the site, and, (d) the minimum water level to which water can be drawn for use at other plants; and (e) capacity-head curves for plants having large variations in head. Elevations should be referred to U. S. G. S. datum (or to the same datum as used in plant layout sketches—see item C (1) below).

3. Furnish "Operating Rule Curves" for each of the foregoing reservoirs, in the form in which they are available, and state period for which curves are applicable.



C. Hydroelectric Power Plants.

1. For each hydroelectric plant of 2,500-kilowatt installed capacity or greater furnish:
   (a) A sketch of the plant layout, showing elevations, referred to U. S. G. S. datum if such datum is available. Furnish curves showing headwater and tailwater elevations, in feet, plotted against total discharge, including plant use, in cubic feet per second.
   (b) A photograph of the plant if available.

2. If available, furnish for all hydroelectric plants of 10,000-kilowatt installed capacity or greater, curves showing the relation between over-all water use in cubic feet per second and gross plant load in kilowatts, from minimum to full load at a constant gross head which approximates the average head. The gross head should be stated.

[26174] Item IIII 4718

Schedule 13

DEMAND ON GENERATING PLANTS, POWER RECEIVED, AND POWER DELIVERED, FOR RESALE, AT THE TIME OF SYSTEM PEAK LOAD OF THE YEAR

1. This schedule and schedules 14 and 15 are intended to show the load characteristics of the respondent's system in a form that avoids duplication with similar data for other systems. For this purpose the respondent's "system load" for any 60-minute clock-hour interval is defined as being equal to the aggregate of the energy supplied during that interval:
   (a) To ultimate consumers of the respondent;
   (b) To the systems listed in schedule 8 Part A i.e., to class I and class II systems that received their entire power supply and class III systems that received all or a part of their power supply, from the respondent's system during the year;
   (c) To other departments of the respondent; and, for transmission and distribution losses and energy unaccounted for on the respondent's system; and, for the respondent's electric utility operations (exclusive of plant use).

Note that the system load as here defined does not include the demands of other class I and class II systems whose power requirements during the year were not wholly supplied by the respondent's system, i. e., which obtained a part of their requirements from their own generating facilities or from sources other than the respondent's system. Deliveries to such systems, listed in "D" below, must be excluded in order to avoid duplication.

2. Class I and class II systems should furnish the information requested below for the 60-minute clock-hour interval during which the system peak load of the year occurred.

3. All of the demand data called for in this schedule should show integrated kilowatt demands for the 60-minute clock-hour interval during which the system peak load of the year occurred. Where integrated demands for 60-minute clock-hour intervals are not available, it is desired that available data be adjusted to approximate the integrated demand for 60-minute clock-hour intervals. Adjustments made should be explained in footnotes. Where such adjustments cannot be made, demand data should be furnished in the form available.

4. Estimated quantities (noted "Est.") should be furnished where measured data are not available.

	Integrated Demand—Kilowatts (at time of system peak)	
Date and hour of system peak load of year May 25 - 1 PM	Demand Interval Clock Hr.	
A. Combined net demand on system generating plants (from col. 11, line 36, schedule 1)	368,000	1
B. Itemized accounting of power received from other systems and industrial companies, except "borderline" receipts entered on line 40, schedule 8 part A.		
Name of other systems		2
		3
		4
		5
		6
		7
		8
		9
		10
Total of lines 2 to 10, inclusive	0	11
C. Demand on generating plants plus power received (line 1 plus line 11)	368,000	12
D. Itemized accounting of power delivered to other systems for resale, except to those listed in schedule 8 part A		
Name of other system		13
Philadelphia Electric Company	14,000	14
Metropolitan Edison Co.	28,000	15
Pennsylvania Power & Light Co.	27,000	16
		17
Consolidated Gas Electric Light & Power Co.	270,000	18
		19
		20
		21
Total of lines 13 to 21, inclusive	339,000	22
E. System peak load of the year (C minus D). This entry should agree with the peak load of the year as shown in schedules 14 and 15, using the same demand interval Clock Hour	29,000	23
F. System power factor at time of system peak corresponding to item "E" above Approx. 95 percent. Estimate (noted "Est.") should be furnished if power factor is not obtainable from actual measurements		24

[26176] Item IIII 4719

Schedule 16

SYSTEM DEPENDABLE AND ASSURED CAPACITY

INSTRUCTIONS

1 (a). Show as the dependable capacity of the system fuel plants that capacity which can be relied upon to be available for active or standby service at the usual time of the annual system peak. Allowance should be made for any maintenance outage of equipment which MUST be scheduled during the usual time of the annual system peak, giving an explanation under "Remarks." In the space under "Remarks", show what part of the dependable system fuel capacity is suitable only for short-time operation or standby service.

1 (b). The dependable capacity of system hydro plants, as defined for Schedule 16, relates to the capacity which under the most adverse flow conditions of record can be relied upon to carry system load, provide dependable reserve capacity, and meet firm power obligations, taking into account seasonal variations and other characteristics of the load to be supplied and of the firm power obligations. Some systems may be able to utilize off-peak energy from other systems so as to increase the dependable capacity of the reporting system hydro plants. Where consideration is given to the off-peak energy which can be secured from others, an explanation of the amount and conditions governing the receipt of such energy should be given. In cases where the stream-flow records indicate that the most adverse flows are not likely to occur except at long intervals of time and are likely to be of very short duration, the figures used in determining the capacity available from hydro plants may be modified, treating such abnormal limitations as an emergency condition to be covered by the reserve capacity. Such modifications should be fully explained. Full consideration should be given to data reported in Schedule 2 for adverse flow conditions in computing the annual dependable system hydro capacity.

2. Show the amount of firm power which is intended to be available at the usual time of the annual system peak from utilities, industries, or others. Show amount stated in contract; if it is not a single, definite, fixed amount, explain under "Remarks" or on a separate sheet. DO NOT INCLUDE POWER WHICH MIGHT BE AVAILABLE UNDER INTERCHANGE, EMERGENCY, OR "WHEN, AS, AND IF" ARRANGEMENTS. It is desired that corresponding items reported be in agreement as between the affected companies. It is, therefore, suggested that the companies concerned agree upon the figures to be reported.

3. Show the amount of firm power committed or obligated which is intended to be available at the usual time of the respondent's system peak to other systems. Show amount stated in contract; if it is not a single, definite, fixed amount, explain under "Remarks" or on a separate sheet. DO NOT INCLUDE OBLIGATIONS UNDER INTERCHANGE, EMERGENCY, OR "WHEN, AS, AND IF" ARRANGEMENTS. It is desired that corresponding items reported be in agreement as between the affected companies. It is, therefore, suggested that the companies concerned agree upon the figures to be reported.

5 (a). Show the total amount of reserve capacity, regardless of the source, considered necessary to maintain adequate service at the usual time of the annual system peak, without regard to the relation of net assured capacity to system peak. In general, the largest reduction in dependable capacity which might result from an outage of a generator or boiler unit determines the minimum reserve capacity required. Where unusual conditions obtain, explain fully in the space under "Remarks."

5 (b). Show that portion of the total required reserve capacity which is relied upon to be available at the usual time of system peak under interchange, emergency, or similar agreements with others. In the space under "Remarks" show in detail the sources of this capacity and state what portion is (1) spinning reserve instantly available; (2) available during times of maintenance and inspection; (3) available upon short notice; and (4) length of time available.

5 (c). Show in the space provided for "Remarks" whether the reserve capacity required to be supplied by own plants is available wholly from fuel plants or wholly from hydroelectric plants or a combination of both, and state the length of time this capacity could be depended upon in case of system outages. Some systems having storage hydro may be limited as to the magnitude of load that can be carried by the amount of potential energy available under adverse stream flow conditions. Such systems may have excess peaking capacity, some portion of which can be considered as dependable reserve capacity, provided sufficient energy is held in storage to take care of possible system outages during the critical period. Such capacity should be included in Item 1 (b) with full explanation under "Remarks."

If a considerable amount of energy is normally received from or delivered to others (exclusive of deliveries to systems listed in Schedule 8, Part A) under interchange, emergency, or "When, as, and if" arrangements and such transfers are expected to continue, give a brief description under "Remarks." Where firm power obligations or purchases vary in the amount of capacity that is available for any specific period of time or have limitations as to the amount of energy available, full explanation should be given under "Remarks." Use additional sheets for remarks if necessary.

Remarks:

Item 1(b)

The amount shown hereon as the dependable capacity of system hydro plants was determined in accordance with the instructions to Schedules 2 and 16 and is our determination of the dependable capacity of Respondents' hydroelectric plants in the sense of the installed dependable steam capacity replaced on the interconnected system by such hydro plants. This determination is based on loads now estimated for the year 1947 and takes into account seasonal variations in the firm power load of the interconnected system of area 6, peaking capabilities of system steam capacity, scheduled hydro and steam maintenance requirements and

[26177] Item IIII 4720

frequency of occurrence, duration and magnitude of high and low river flows in the various seasons throughout the year, together with the requirements for emergency use of stored energy to carry the system load during periods of forced outages of large amounts of system steam capacity.

The dependable capacity of the Holtwood hydroelectric plant of Pennsylvania Water & Power Company is 100 000 kw.

Item 3

Based on loads estimated for the year 1947.

Item 5(a)

This amount is determined as 15%, which is the minimum reserve equipment for the interconnected system of Area 6, of the sum of the non coincident one-hour integrated peak loads ("assured capacity" requirements) of the firm power supply estimated for year 1947 to the Coatesville division of the Philadelphia Electric Co., and the Lancaster division of the Pennsylvania Power & Light Co., both in Area 5. There is no such similar provision made with respect to the firm supply to the Metropolitan Edison Co. since such supply is of "firm capacity" or "dependable capacity" rather than the carrying of a firm load with respect to which "assured capacity" is required to be provided.

Power System Statement of Holtwood-Safe Harbor System for the Year Ended December 31, 1946

Schedule 16—Continued

SYSTEM DEPENDABLE AND ASSURED CAPACITY

Assuming a continuance of the relative seasonal and hourly variations of load that occurred during the year of this report, show in item 6, as derived below, what MAXIMUM ANNUAL SYSTEM LOAD could be carried with the system facilities and arrangements for the purchase or sale of firm power as they existed at the end of year covered by this report with allowance for reserve capacity theoretically required: (See detailed instructions on page 30.)

	1000 Kilowatts	1000 Kilowatts
1. Net dependable capacity available from:		
(a) System fuel plants (including capacity required for station use)	28	
(b) System hydro plants	300	
(c) Subtotal ((a) plus (b))		310*
2. Capacity available from firm purchases:		
From:		
Total		
3. Firm obligations to systems listed in schedule 8, part B: (At time of annual peak of Area 6)		
To: Respondents' Pennsylvania Customers in Area 5	111	
Total		111
4. Net dependable capacity plus net purchases (1 (c) plus 2 minus 3)		199
5. Reserve capacity required (exclusive of reserve for load growth):		
(a) Total reserve for system (Applicable to assumed obligations included in Item 3)	15	
(b) Available through interchange or emergency agreements		
(c) Reserve capacity required to be supplied by own system ((a) minus (b))		15
6. Net dependable system capacity (4 minus 5 (c)) (Available to Area 6)		184

List below all scheduled alterations, additions, or retirements in system generating plants and changes in firm power contracts with other systems.

Description of Change (Give plant name and location where applicable) (1)	Date (Month—Year) Start (2)	Completion (3)	Contract Change or Name-Plate Rating (Kilowatts) (4)	Effect in Kilowatts on— Net dependable capacity (5)	Reserve capacity (6)	Net assured capacity (7)

1 If the seasonal and hourly variations in load are expected to change materially from those experienced during the year of this report, the information given may be based on the expected load shape, explaining in a footnote.

Remarks:

*After allowance of 18 mw. for transmission losses and station uses.

June 20, 1947

Mr. R. T. Greer,
Member - Operating Committee,
Consolidated Gas Electric Light and Power Company,
Baltimore-3, Maryland

Dear Mr. Greer:

Please find enclosed operating data prepared by this Company for Schedules 2 and 16 of F.P.C. Form 12 for the year 1946. The attached schedules and accompanying notes are being filed by Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation in their Power System Statement to the Federal Power Commission, and these same data are applicable to the Combined System Statement compiled by your Company.

We regret that you did not consult us before this Combined System Report was filed, particularly as such information is presumed to be compiled from data submitted by the several operating companies. Certain of the data which you did incorporate are, in our opinion, incorrect and do not agree with the data shown on the attached schedules as reported for the Penn Water and Safe Harbor System. We believe the statements enclosed are the only correct data for submission to the Federal Power Commission as respects the capacities of this Company and of Safe Harbor Water Power Corporation.

We must, therefore, enter our objection to and disagreement with such data as reported by your Company.

Yours very truly,

G. W. Spaulding
Member - Operating Committee

ITEM JJJJ.

Electric Utilities and Licensees

(Classes A and B)

ANNUAL REPORT

of

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE

Lexington Building, Baltimore, Maryland

to the

FEDERAL POWER COMMISSION

for the

YEAR ENDED DECEMBER 31, 1946

(Excerpts)

530. SALES TO OTHER ELECTRIC UTILITIES (Account 555)

1. Report below the information called for concerning sales during year to other electric utilities and to cities or other public authorities for distribution to ultimate consumers.
2. Report separately firm, dump, and other power sold to the same company. Describe the nature of any sales classified as Other Power, column (g).
3. If a fixed number of kilowatts of maximum demand is specified in the power contract as a basis of billing to the customer this number should be shown in column (k). The number of kilowatts of maximum demand to be shown in columns (l) and (m) should be actual based on monthly readings and should be furnished whether or not used in the determination of demand charges. Show in column (n) type of demand reading (instantaneous, 15, 30, or 60 minutes integrated).

A. Summary of Sales According to Companies and Points of Delivery

Line No.	Sales to — (a)	Associated utilities (b)	Nonassociated utilities (c)	Municipalities (d)	Firm power (e)	Dump or surplus power (f)	Other power (g)	Sales within State boundaries (h)	Exports across State lines (i)	Point of delivery (If necessary use an insert page and identify points of delivery by line numbers of this schedule) (j)	KILOWATTS OF DEMAND: Contract demand (k)	Average monthly maximum demand (l)	Annual maximum demand (m)
1	Potomac Electric									(Near Takoma Park, Md.			
2	Power Company (A)		X		X				X	and Benning, D.C.)	35,000	12,250 (B)	48,000 (C)
3													
4													
5	(A) Excludes "Interchange Power" to Potomac Electric Power Company. See Schedule												
6	552.												
7													
8	(B) Represents average maximum difference during each month computed as explained												
9	in Note (C).												
10													
11	(C) Represents the maximum difference for the year which occurred during the												
12	month of July between Potomac Electric Power Company's load as indicated												
13	by graphic wattmeter and steam line (as defined in Article III, Section 2												
14	of the contract).												
15													
16	(D) Includes 778,000 kw.-hrs. which were purchased by the Respondent as "Inter-												
17	change Power" but generated and used by Potomac Electric Power Company in												
18	its own system.												
19													
20	(E) Includes demand and energy charge for "Firm Power" delivered to Potomac												
21	Electric Power Company. See Article IX, Section 1 of contract on file with												
22	the Commission.

[26184] Item JJJJ 4726

1946

Consolidated Gas Elec. Lt + Power

NOTES APPLICABLE TO SCHEDULE 551 - PURCHASED POWER

(A) Not available; see, also, Note B.

(B) The Respondent and Pennsylvania Water & Power Company, under a long-term contract continuing until April 22, 1980, purchase two-thirds and one-third, respectively, of the entire electrical capacity and energy available from Safe Harbor Water Power Corporation's hydro-electric development on the Susquehanna River. The Respondent also purchases, under another long-term contract continuing until April 22, 1980, all of the electrical capacity and energy available to Pennsylvania Water & Power Company produced at its own plants and purchased by it from the Safe Harbor Water Power Corporation, except such energy as is sold by Pennsylvania Water & Power Company to its Pennsylvania Customers. Under the above contracts, Respondent purchased 570,025,000 kwh. from Safe Harbor Water Power Corporation and a net amount of 56,017,000 kwh. from Pennsylvania Water & Power Company for the year 1946. The coordination and interconnection of the plants at Holtwood and Safe Harbor with the plants owned by Respondent create a power pool wherein the flow of energy is such that energy purchases from individual sources cannot be traced to the points of receipt. Under these contracts the Respondent pays annual amounts for all power available from said developments which are independent of the volume of energy received and which produce annual net operating revenue to those companies as stipulated in the contracts, after providing for their reasonable operating expenses including taxes, etc. Amount shown as payment to Pennsylvania Water & Power Company does not include $36,551.75 allocated by Respondent to transmission expense.

(C) Conowingo Substation of The Pennsylvania Railroad Company.

(D) Energy is metered at 132,000, 33,000 and 13,200 volts.

(E) Energy is metered at 6,600 volts.

(Excerpts)

[26198] (Page 522A)

NOTES APPLICABLE TO SCHEDULE 551. PURCHASED POWER

(A) Not available; see, also, Note B.

(B) The Respondent, under long-term contracts (copies of which are on file with the Commission) with Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation, is entitled to all power generated at Safe Harbor Water Power Corporation's hydroelectric development on the Susquehanna River and at the Holtwood hydroelectric and steam-electric plants of the Pennsylvania Water & Power Company, except such power as may be sold by those companies to other customers. Under these contracts the Respondent pays annual amounts for all power available from said developments which are independent of the volume of energy received and which when added to revenue from power so sold to other customers produce annual net operating revenue to those companies as stipulated in the contracts, after providing for their operating expenses and taxes. Amount shown as payment to Pennsylvania Water & Power Company does not include $33,126.87 allocated by Respondent to transmission expense.

(C) Delivery of energy is made to Respondent in Maryland and title passes at time of delivery.

(D) Conowingo Substation of The Pennsylvania Railroad Company.

Joint Petition of the Mayor and City Council of Baltimore, County Commissioners of Baltimore County, Bethlehem-Fairfield Shipyard, Inc., and Rustless Iron & Steel Corp, dated August 12, 1944.

[26215]

Baltimore, Maryland
August 12, 1944

FEDERAL POWER COMMISSION
Aug 14 1944
RECEIVED

Hon. Basil Manly
Acting Chairman—Federal Power Commission
18th Street and Pennsylvania Avenue, N. W.
Washington, D. C.

Dear Commissioner Manly:

The undersigned are counsel for certain intervenors in an investigation now pending before the Maryland Public Service Commission of the rates for electric service charged by the Consolidated Gas Electric Light and Power Company of Baltimore. The purpose of this letter is to request your Commission to determine, at the earliest convenient date, the just and reasonable wholesale rates charged for electric energy which is sold to the Consolidated Company in interstate commerce by two hydro-electric companies whose plants are located in the State of Pennsylvania, namely, Pennsylvania Water and Power Company and Safe Harbor Water Power Corporation. Reference is made to an interview which one of the undersigned, Mr. Charles C. G. Evans, had with your Commission some weeks ago at which this matter was informally discussed.

The Mayor and City Council of Baltimore, a municipal corporation of Maryland, is interested in the rates charged by the river companies in two respects and capacities. First, it is one of the largest single consumers of gas and electric energy supplied by the Consolidated Gas Electric Light and

Power Company of Baltimore in connection with the lighting of its streets and public buildings. Second, it is deeply concerned with the rates charged to other ratepayers in Baltimore City by that company. Baltimore County has a similar concern with regard to its own consumption and that of its residents.

The investigation here has proceeded to a point where it has become apparent that the rates of the Consolidated Company cannot be effectively determined unless determinations are also made of the just and reasonable wholesale rates at which this Company purchases energy in interstate commerce from the two hydro-electric companies. It also appears that the wholesale rates of these two companies, which have never been regulated, are grossly excessive. Evidence already submitted to the Maryland Commission tends to show *prima facie* that, on the basis of book figures and a return of five and a half per cent., a reduction is indicated of at least $2,500,000 in the annual power bills paid these companies by [26216] (page 2) the Consolidated Company. In this connection we beg to call your attention to the fact that in case known as Docket IT-5494, decided June 11, 1940, the Federal Power Commission found the rates of Safe Harbor Water Power Corporation to be excessive. Yet, notwithstanding the considerable time which has elapsed since this finding was made, the ratepayers affected, including the undersigned, have obtained no relief.

On June 27, 1944, People's Counsel for the State of Maryland, an official appointed by the Governor and charged by statute with the duty of representing the interest of the public in cases involving the rates and practices of public utility corporations, formally petitioned the Maryland Public Service Commission to request your Commission to make the rate determinations here requested. The undersigned joined in that application. While no order has been passed upon those petitions, we understand informally that joint hearings with regard to these rates are

contemplated by the Maryland and Pennsylvania commissions.

While Safe Harbor Water Power Corporation is a licensee under the Federal Power Act, the Pennsylvania Water and Power Company is not a licensee. Furthermore, a portion of the energy sold by the latter company in interstate commerce is generated by a steam plant.

In view of the clearer jurisdiction of the Federal Power Commission and its superior facilities for making these determinations, we respectfully request that the Federal Power Commission itself determine these rates and if practicable afford relief by interim orders.

Respectfully,

THOMAS J. TINGLEY
Assistant City Solicitor
Attorney for Mayor and City Council of Baltimore

MICHAEL PAUL SMITH
Attorney for County Commissioners of Baltimore County

CHARLES C. G. EVANS
Attorney for Bethlehem-Fairfield Shipyard, Inc.

JOHN HENRY LEWIN
Attorney for Rustless Iron & Steel Corporation

Letter of Public Service Commission of Maryland Dated August 30, 1944 Requesting Rate Investigation.

[26217]

(included herein as part of Item R at Page 25523D)

Letter Dated November 16, 1945 from Federal Power Commission Outlining Order of Procedure.

[26257]

FEDERAL POWER COMMISSION

Re: Pennsylvania Water & Power Company
Docket No. IT-5915

Gentlemen:

Enclosed is the order entered by the Commission on November 9, 1945, in the above entitled proceeding.

The order of procedure at the public hearing in this proceeding will be for the Pennsylvania Water & Power Company to proceed first with the presentation of its evidence; for the Susquehanna Transmission Company of Maryland, Consolidated Gas Electric Light & Power Company of Baltimore, Pennsylvania Public Utility Commission, Public Service Commission of Maryland, and the staff of the Federal Power Commission to follow with the presentation of their evidence in the order named, while the order of presentation of evidence by any other participant shall be as determined at the hearing by the presiding Commissioner, Examiner, or other representative of the Commission.

Very truly yours,

/s/ J. H. GUTRIDE,
J. H. Gutride,
Acting Secretary.

Enclosure.
Registered

Petition for Specification of Issues filed April 3, 1946 by Pennsylvania Water & Power Company and Susquehanna Transmission Co., of Maryland.

[26279]

UNITED STATES OF AMERICA
FEDERAL POWER COMMISSION

In the Matter of PENNSYLVANIA WATER & POWER COMPANY } Docket No. IT-5915

PETITION FOR SPECIFICATION OF ISSUES AND RECONSIDERATION OF DIRECTION FIXING ORDER OF PROCEDURE

Reserving to themselves all or any questions of jurisdiction available to them, whether or not specifically referred to herein, come the Pennsylvania Water & Power Company and the Susquehanna Transmission Company of Maryland and respectfully petition the Commission for specification of the issues and for reconsideration of the direction of the Commission fixing the order of procedure, for the following reasons:

(1) Your Commission's Order Instituting Investigation, dated September 1, 1944, in the above-entitled matter, recited among other things that it was issued upon consideration of a petition filed on August 31, 1944, by the Maryland Public Service Commission requesting that your Commission institute an investigation of the interstate wholesale rates of the Safe Harbor Water Power Corporation and the Pennsylvan' Water & Power Company; and upon consideration of a joint petition filed on August 14, 1944, by counsel for the Mayor and City Council of Baltimore, Maryland, counsel for the County [26280] (page 2) Commissioners of Baltimore County, Maryland, counsel for Bethlehem-Fairfield Shipyard, Inc., and counsel for Rust-

less Iron & Steel Corporation, also requesting your Commission to institute such an investigation. Examination of the public record in the matter of Safe Harbor Water Power Corporation, F. P. C. Docket No. IT-5914, shows that the Maryland Commission, by letter dated August 30, 1944, and filed on August 31, 1944, requested your Commission to determine reasonable rates to be charged by Safe Harbor Water Power Corporation and by Pennsylvania Water & Power Company for energy sold to Consolidated Gas Electric Light and Power Company of Baltimore, without alleging that any of such existing rates were unjust, unreasonable, unduly discriminatory, preferential or excessive. Such letter included a statement that the State Commissions were ready to engage in cooperative regulation, and forwarded copies of schedules 10 to 13, inclusive, of exhibit No. 1 of Maryland People's Counsel in a proceeding before the Maryland Commission involving the rates of Consolidated Company. The same record shows that the joint petition referred to above was a letter, under date of August 12, 1944, which requested your Commission to determine the just and reasonable wholesale rates charged for electric energy sold to Consolidated Company in interstate commerce by the Safe Harbor Water Power Corporation and the Pennsylvania Water & Power Company. Such joint petition stated that it was understood that joint hearings with regard to such rates were contemplated by the Maryland and Pennsylvania Commissions; and alleged among other things that the wholesale rates of Pennsylvania [26281] (page 3) Water & Power Company and Safe Harbor Water Power Corporation are excessive, without specifying which of the companies' rates or charges were so excessive and in what respects it is contended they are excessive; and further alleged that on the basis of evidence submitted to the Maryland Commission a specific reduction was indicated in the annual power bills of the Consolidated Company. There is no allegation in either the petition of

the Maryland Commission or in such joint petition that the Maryland and Pennsylvania Commissions are unable to agree on the services to be rendered or on the rates or charges of payment therefor of Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation. No copies of such request by the Maryland Commission with accompanying documents, or such joint petition, or the evidence relied upon submitted to the Maryland Commission were ever served upon your Petitioners and your Petitioners were not parties to said proceeding before the Maryland Commission involving the rates of the Consolidated Company. Nor were any statements of the complaints contained in such petitions forwarded by your Commission to your Petitioners.

(2) The Commission's Order Instituting Investigation, dated September 1, 1944, ordered an investigation instituted to enable the Commission:

(A) To determine whether, in connection with any transmission or sale of electric energy subject to the jurisdiction of this Commission under the Federal Power Act, by Pennsylvania Water & Power Company, any rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, are unjust, unreasonable, unduly discriminatory or preferential; and

[26282] (page 4)

(B) If, after hearing, it shall find that any of such rates, charges, classifications, rules, regulations, practices, or contracts are unjust, unreasonable, unduly discriminatory, or preferential, to determine and fix by appropriate order or orders, just and reasonable rates, charges, classifications, rules, regulations, practices, or contracts to be thereafter observed and in force.

Such Order of Investigation did not specify which of your Petitioners' rates, charges or classifications, contained in various contracts mentioned in paragraph (c) of an "appearing" clause of the Order, are considered by the Commission as subject to its jurisdiction and under investigation; and did not specify in what respects it is conterded, if at all, that any of such rates, charges, or classifications, or any of the rules, regulations, practices or contracts affecting them, are unjust, unreasonable, unduly discriminatory or preferential. Nor does such Order specify whether the Commission is exercising jurisdiction under Part I or Part II of the Federal Power Act. There is no finding by the Commission in such Order that the States of Pennsylvania and Maryland are unable to agree through their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor of Pennsylvania Water & Power Company by itself or jointly with others, as a prerequisite under Section 20 of Part I of the Act before the Commission has jurisdiction to act under such Section 20. On the contrary the aforementioned petition of the Maryland Commission shows on its face that such State Commissions are not unable to agree on the services to be rendered or on the rates and charges of payment therefor of Pennsylvania Water & Power Company by itself or jointly with others.

[26283] (page 5)

(3) A Supplemental Order Enlarging Investigation, dated October 3, 1944, in the above-entitled matter, recited that Susquehanna Transmission Company of Maryland owns facilities used in the rendering of interstate service by Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation and ordered that:

(A) The investigation instituted by the Commission's order of September 1, 1944, be and the same is hereby enlarged to include Susquehanna Trans-

mission Company of Maryland for the purpose of enabling the Commission to determine whether, in connection with any transmission or sale of electric energy by Pennsylvania Water & Power Company or Susquehanna Transmission Company of Maryland subject to the jurisdiction of the Commission, any rates, charges, or classifications demanded, observed, charged or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, are unjust, unreasonable, unduly discriminatory or preferential; and

(B) If, after hearing, it shall find that any of such rates, charges, classifications, rules, regulations, practices or contracts are unjust, unreasonable, unduly discriminatory, or preferential, to determine and fix by appropriate order or orders, just and reasonable rates, charges, classifications, rules, regulations, practices, or contracts to be thereafter observed and in force.

Such Supplemental Order did not specify which of your Petitioners' rates, charges or classifications are considered by the Commission as subject to its jurisdiction and under investigation; and did not specify in what respects it is contended, if at all, that any of such rates, charges or classifications, or any of the rules, regulations, practices or contracts affecting them, are unjust, unreasonable, unduly discriminatory or preferential. Nor does such Order specify whether the Commission is exercising jurisdiction under Part I or Part II of the Act; nor were there any of the findings necessary for [26284] (page 6) jurisdiction under Part I of the Act, as outlined in paragraph (2) above.

(4) If Pennsylvania Water & Power Company is to be treated as if a Licensee under Part I of the Act by virtue of the Commission's Order of November 3, 1939, in Docket

No. IT-5524, as indicated by paragraph (b) of the "appearing" clause of the Commission's Order of September 1, 1944, in the above-entitled matter, or if Pennsylvania Water & Power Company is to be considered a purchaser of power from Safe Harbor Water Power Corporation, a Licensee, for use in public service; then under Part II of the Act the Commission has no jurisdiction to regulate the rates or charges of Pennsylvania Water & Power Company or of that Company and Safe Harbor Water Power Corporation for service rendered jointly.

(5) Under Section 20 of Part I of the Act any rate regulatory jurisdiction the Commission may have is limited to the authority to regulate and control so much of the services rendered by Pennsylvania Water & Power Company jointly with others, and of the joint rates and charges of payment therefor as constitute interstate or foreign commerce. If under Part II of the Act the Commission has any rate regulatory jurisdiction, it is limited by Sections 201 (b) and 206 (a) to authority, under appropriate circumstances, for the determination and fixation by order of future just and reasonable rates, charges or classifications for any transmission of electric energy in interstate commerce or for any sale of electric energy at wholesale in interstate commerce, or of future rules, regulations, practices or contracts affecting such interstate rates, charges or classifications. [26285] (page 7) The Commission has no jurisdiction under Part II to regulate rates, charges or classifications for any sales of electric energy other than for sales of electric energy at wholesale in interstate commerce. Pennsylvania Water & Power Company renders services to the Pennsylvania Railroad Company jointly with the Safe Harbor Water Power Corporation, the Consolidated Company and the Potomac Electric Power Company of Washington, D. C., for which joint charges are made under joint rates. Part of such services do not constitute interstate or foreign commerce and none

of such services and the payments received therefor constitutes a sale of electric energy at wholesale, within the meaning of Section 201 of Part II of the Act. In addition, a large proportion of the revenues received by Pennsylvania Water & Power Company, for services other than to the Pennsylvania Railroad Company, are for services rendered by itself and jointly with Safe Harbor Water Power Corporation in the State of Pennsylvania in intrastate commerce. Such services do not constitute interstate or foreign commerce, and the rates, charges and classifications therefor are not for the transmission of electric energy in interstate commerce or for the sale of electric energy at wholesale in interstate commerce.

(6) All of the services rendered by Pennsylvania Water & Power Company, except those rendered to Metropolitan Edison Company in the State of Pennsylvania and in addition to those rendered to the Pennsylvania Railroad Company described above, are rendered jointly with Safe Harbor Water Power Corporation; and the rates and charges for such services are joint rates and charges from which [26286] (page 8) Pennsylvania Water & Power Company derives revenues in the form of divisions of such rates and charges. The Commission is without jurisdiction under the Act to regulate or control or to determine and fix by order the just and reasonable divisions of such joint rates or charges, or to regulate the revenues to be received by Pennsylvania Water & Power Company from such divisions. The Commission is without jurisdiction to regulate or control or to determine and fix by order any of such joint rates or charges without giving a fair hearing to all participants in such joint services and the rates and charges of payment therefor. None of such other participants have been made respondents in the above-entitled matter.

(7) By Order, dated November 9, 1945, in the above-entitled matter, the Commission ordered a hearing be held.

Such hearing is now set for April 15, 1946. In a letter dated November 16, 1945, from the Acting Secretary of the Commission to your Petitioners, enclosing copies of the Order fixing Date of Hearing on November 9, 1945, the order of procedure at the public hearing was specified as follows:

> The order of procedure at the public hearing in this proceeding will be for the Pennsylvania Water & Power Company to proceed first with the presentation of its evidence; for the Susquehanna Transmission Company of Maryland, Consolidated Gas Electric Light & Power Company of Baltimore, Pennsylvania Public Utility Commission, Public Service Commission of Maryland, and the staff of the Federal Power Commission to follow with the presentation of their evidence in the order named, while the order of presentation of evidence by any other participant shall be as determined at the hearing by the presiding Commissioner, Examiner, or other representative of the Commission.
>
> [26287] (page 9)

By such letter Petitioners are required to proceed first with the presentation of their evidence before hearing the contentions and evidence of the joint petitioners complaining of your Petitioners' rates and charges who are or may become Intervenors in the above-entitled matter, the Maryland Commission, the Pennsylvania Commission, the Consolidated Company, or the staff of your Commission, in a proceeding initiated at the request of the Maryland Commission and on the complaint of others. Neither such letter nor any of the Commission's Orders in the above-entitled matter specify what evidence it is desired that your Petitioners produce at the hearing.

(8) The rates, charges and classifications, made, demanded, received, observed, charged and collected by Pennsylvania Water & Power Company by itself and jointly with others, and the rules, regulations, practices and con-

tracts affecting such rates, charges and classifications are now lawfully in force under the laws of the United States and of the State of Pennsylvania, are not unjust, unreasonable, unduly discriminatory or preferential, and are therefore now unlawful unless and until shown by adequate evidence and found by competent authority to be unjust, unreasonable, unduly discriminatory or preferential, after a fair hearing.

(9) The effect of the requirements of the Commission's letter of November 16, 1945, together with the Orders heretofore issued in the above-entitled matter, is to require Petitioners to proceed with unspecified evidence as to the reasonableness of their rates, charges and classifications, now lawfully in force under the [26288] (page 10) laws of the United States and of the State of Pennsylvania, without fair notice, evidence or findings (a) as to the statutory basis of the exercise of any rate regulatory jurisdiction by the Commission; (b) as to which of such rates, charges or classifications, if any, are subject to the jurisdiction of the Commission and under investigation; or (c) as to the contentions of or facts relied upon by the complainants, the Consolidated Company as a customer of Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation jointly, the State Commissions, or the Government as represented by the staff of the Commission with respect to the just or unjust, reasonable or unreasonable, non-discriminatory or discriminatory, or non-preferential or preferential character of any of Petitioners' rates, charges or classifications, or any of the rules, regulations, practices or contracts affecting them; thereby depriving Petitioners of the fair hearing required by the Federal Power Act and the due process clause of the 5th Amendment to the Constitution of the United States.

(10) Such requirements will also (a) tend to prolong unduly the hearings by encouraging the production of evidence which may not be necessary to be produced if the

contentions as to the basis and scope of the jurisdiction of the Commission and the contentions and issues with respect to Petitioners' rates, charges, classifications, rules, regulations, practices and contracts were adequately defined; and (b) tend to produce a disorderly record by the presentation of evidence by Petitioners without adequate knowledge of the contentions and issues, if any, by process of direct and [26289] (page 11) rebuttal evidence instead of by rebuttal evidence alone, if any, after adequate knowledge of the contentions, issues and evidence of complainants, Consolidated Company, the State Commissions and the staff of the Commission.

(11) Evidence in the possession of the other participants in the joint services participated in by Pennsylvania Water & Power Company, necessary to a lawful determination of the justness or reasonableness of the joint rates or charges therefor, is peculiarly within the knowledge of such other participants; and it is therefore unfair to your Petitioners and unreasonable to require them to produce any such evidence or to require Petitioners to produce only a part of such necessary evidence before hearing and without adequate knowledge of the remaining part in the possession of such other participants.

Wherefore, your Petitioners pray that the Commission relieve them of the requirement to proceed first with the presentation of their evidence at the hearing in the above-entitled matter; require any intervening parties complaining of Petitioners' rates, charges or classifications, or any rules, regulations, practices or contracts affecting them, to so proceed first; require the Consolidated Gas Electric Light & Power Company of Baltimore, the Public Service Commission of Maryland, the Pennsylvania Public Utility Commission, the staff of the Federal Power Commission, to so proceed before requiring the Petitioners to proceed with the presentation of their evidence; and require the staff of the Commission and all such parties other [26290] (page

12) than your Petitioners to file a written statement prior to hearing as to their contentions with respect to, (a) the statutory basis of the exercise of the Commission's jurisdiction in the above-entitled matter; (b) which of your Petitioners' rates, charges or classifications, if any, are subject to the jurisdiction of the Commission and under investigation; and (c) the unjust, unreasonable, unduly discriminatory or preferential character of any of such rates, charges or classifications, and of any rules, regulations, practices, or contracts affecting such rates, charges or classifications.

Gentlemen:

There is inclosed a copy of a proposed Electric Tariff recently tendered for filing by Pennsylvania Water & Power Company in response to this Commission's order issued January 5, 1949 prescribing an annual rate reduction in the interstate wholesale rates and charges of $1,954,261 on the basis of 1946 sales and services. There is also inclosed a copy of this Commission's order issued January 5, 1949 which is referred to in the company's proposed Tariff.

The Commission will appreciate receiving by June 14, 1949 any comments or suggestions you may desire to make concerning this proposed FPC Electric Tariff. Please forward your response in duplicate.

Very truly yours,

LEON M. FUQUAY
Secretary.

Dear Sir:

This will acknowledge receipt of your letter dated June 2, 1949, enclosing a copy of proposed electric tariff tendered for filing by Pennsylvania Water & Power Company in compliance with the order of your Commission issued January 5, 1949, together with a copy of the order.

As you know this Commission has appealed from the order of the Federal Power Commission, the case being docketed at No. 10239 in the United States Court of Appeals for the District of Columbia Circuit, on the grounds, inter alia, that your Commission lacked jurisdiction to make the order of January 5, 1949.

Since the requirement of filing a tariff presupposes jurisdiction over the rates and charges of Pennsylvania Water & Power Company, this Commission must object to the filing, without, however, commenting on the form or contents of the tariff itself.

ATTENTION—Mr. Leon M. Fuquay

Gentlemen:

Your letter dated June 2, 1949, enclosing a proposed electric tariff recently tendered for filing by the Pennsylvania Water and Power Company, and a copy of the Commission's Order issued January 5, 1949 in connection with same, was received in due course.

Speaking for Baltimore City, we feel that the schedules issued by the Pennsylvania Water and Power Company in said tariff violate the Order of the Commission, and that

the Commission should reject them and promptly issue proper schedules under the power referred to in Paragraph E of the Order of January 5, 1949.

The City's appearance as observer throughout these proceedings was not expanded because of the very active participation of the Consolidated Gas Electric Light and Power Company of Baltimore and the Public Service Commission of Maryland, which resulted in full presentation of of the position which the City would have maintained. The Orders of the Commission basically recognize that position. We feel we have the right to rely upon the Commission to implement its Orders to proper rate schedules.

In this respect, we would like to state that the City of Baltimore and its consuming public have paid electric rates for many years predicated in part upon the charges for hydro-power contained in the basic contracts between the Pennsylvania Water and Power Company, Safe Harbor Water Power Corporation and the Consolidated Gas Electric Light and Power Company of Baltimore. Now that the Commission [26790] has reduced these wholesale charges and given the major portion of this reduction to Consolidated Gas Electric Light and Power Company of Baltimore, through whom it will come to the consuming public of Baltimore, we are advised that the Pennsylvania Water and Power Company has sought or is seeking to repudiate its basic agreements with the Consolidated Gas Electric Light and Power Company in an effort to avoid your regulation. In pursuance thereof, it now seeks your approval of rate schedules which will enable it to sell ever-increasing amounts of the power in Pennsylvania. We feel that this would be at the expense of the Baltimore public which, throughout the last eighteen years, has paid at the higher unregulated rates and is now entitled to the service which it has always received at the reduced rates which the Commission has ordered.

In conclusion, we would like to urge upon the Commission to pass an order which would

1. Preserve the basic contractual arrangements;

2. Depart from existing schedules and contracts only to the extent necessary to put into effect the just, reasonable and non-discriminatory charges which it is the Commission's legal duty to enforce; and

3. Preserve to the Baltimore consuming public through Consolidated Gas Electric Light and Power Company of Baltimore that portion of the rate reduction ordered to Consolidated on the 1946 basis.

We would like to thank the Commission for keeping us informed of the steps in the proceeding. We wish to continue our appearance so that we may at any time take whatever further steps may be necessary to fully protect our rights and those of the consuming public of Baltimore.

Very truly yours,

THOMAS N. BIDDISON
City Solicitor

Re: In the Matter of
Pennsylvania Water & Power Company
Docket No. IT-5915

Dear Mr. Fuquay:

The Public Service Commission of Maryland, (hereinafter referred to as the Maryland Commission), recently received from the Federal Power Commission a letter dated June 2, 1949, with a copy of Pennsylvania Water and

Power Company's "FPC Electric Tariff, Original Volume No. 1", that letter stating that your Commission "will appreciate receiving by June 14, 1949 any comments or suggestions" which we might desire to make concerning this proposed tariff.

It is obvious that the schedules issued for filing by Pennsylvania Water and Power Company (hereinafter referred to as Penn Water) do not comply with the Federal Power Commission Order of January 5, 1949, as modified by its Order of January 31, 1949. Paragraphs C and D of the Order of January 5 directed Penn Water *alone* to file schedules. There was no provision for a conditional filing. Ignoring the direction of these Orders, Penn Water has filed three schedules (namely, A, B, and D) on behalf of itself and Safe Harbor Water Power Corporation (hereinafter referred to as Safe Harbor), and a fourth schedule (E) on behalf of Consolidated Gas Electric Light and Power Company of Baltimore (hereinafter referred to as Baltimore Company). All four of these schedules are stated to require the concurrence of such other company before they become effective.

Moreover, the schedules as filed contravene in many respects the findings made by your Commission in issuing its Orders, as well as Opinions Nos. 173 and 173A which [26792] were "incorporated by reference and made a part" of the orders. The Maryland Commission is particularly interested to see that the following discussed deviations from your Commission's directions be corrected.

In Finding No. 15 of the Order of January 5, 1949, it was stated that:

> "(15) Penn Water alone sells firm power and energy to Metropolitan Company under a 1945 agreement, to supply a part of the latter's requirements in York, Pennsylvania; to Philadelphia Company under a 1933 agreement, to supply its requirements in Coatesville, Pennsylvania; and to PP&L, under a 1933 agreement, to supply its requirements in Lancaster, Penn-

sylvania. In addition, Penn Water alone sells energy to each of these companies in interchange."

This finding was the only possible conclusion to be drawn from the evidence before your Commission, as was argued in the Maryland Commission's Brief (pp. 12-14), Baltimore Company's Brief (pp. 6-28), and the Staff's Brief (pp. 40-51). Nevertheless, Penn Water has purported to file joint schedules (A & B) on behalf of itself and Safe Harbor for service to Pennsylvania Power and Light Company and Philadelphia Electric Company. This is a repetition of the untenable position taken by Penn Water before the Commission and repeated in Penn Water's petition for rehearing, but which the Commission rejected in the above mentioned Orders. Because Penn Water has refused to comply with the Commission's direction, the Commission should establish proper schedules on its own initiative in this respect.

In its Opinions No. 173 (p. 167) and No. 173-A (pp. 9-12), the Federal Power Commission found that the basic contract (Items H and I) between Penn Water and Baltimore Company is in the public interest, and ordered that the arrangement under it should be continued with only such modifications as are necessary to accomplish the reductions in rates ordered by your Commission. Schedule E, as filed by Penn Water on behalf of Baltimore Company (presumably without authorization from Baltimore Company), is clearly contrary to the basic contract above referred to and to your Commission's Orders. It constitutes part of Penn Water's attempt to break up the basic arrangements which was restrained by the United States District Court for the District of Maryland (referred to in Opinion No. 173A, p. 14) pending final determination by that Court that of Penn Water's suit to declare the basic contract void. For Penn Water to refuse [26793] to take backfeed from Baltimore Company in interstate commerce or to take it at the fixed rate specified in Schedule E would

be contrary (a) to the system operations under the basic contract; (b) to the above mentioned temporary restraining order; and (c) to your Commission's Orders. There can be no doubt that Schedule E should be rejected.

The proposed schedules for service to Penn Water's Pennsylvania customers (Schedules A, B, and C) also deviate from the intent of the Federal Power Commission to preserve the existing basic arrangements, in that said schedules eliminate the fuel rate adjustments previously applicable to the Philadelphia Electric and Metropolitan Edison Company contracts, and also in that they fail to include some similar adjustment to keep the PP&L reduction at the level specified by your Commission. Baltimore Company, in approving such Pennsylvania customer contracts, as is its right under the basic agreement with Penn Water (Item H), has insisted upon the need for such fuel rate adjustments because all energy sold to such Pennsylvania customers by Penn Water must be replaced by an equivalent amount of steam generated energy in Baltimore. The Maryland Commission, through its then Chief Engineer, Mr. Paul L. Holland, offered evidence that the price of such energy to such customers must be sufficient to compensate for the added cost of the steam generated energy (T. 20,400-43 and 20,449-56) as summarized in our Brief (pp. 9-10, particularly points 6 and 7).

Penn Water has eliminated all fuel rate adjustments as part of its plan to break up the integrated operations, and to transfer as much of its business to Pennsylvania as possible. The Maryland Commission intervened in the proceedings before your Commission (and has intervened in the proceedings before the U. S. District Court for the Middle District of Pennsylvania, the U. S. District Court for the District of Maryland, and the appeal pending before the U. S. Court of Appeals for the Third Circuit with reference to the Commission's Order in the Safe Harbor Case, Docket No. IT-5914) to protect the Maryland public

against this effort of Penn Water to further its own interests at the expense of the Maryland public. We look to your Commission to protect properly the interest of the Maryland public in the schedules which may issue.

Schedule D, as filed by Penn Water, necessarily results in higher payments by Baltimore Company than were contemplated by your Commission's Orders to the extent to which Schedules A, [26794] B, and C have been calculated to give the Pennsylvania customers of Penn Water an ever expanding benefit from the reductions ordered by your Commission on a 1946 basis. This situation can be cured only by a proper fuel rate adjustment being retained in the Coatesville and York area contracts, and some similar adjustment being made with reference to the charges in the Lancaster area contract. Schedule D also deviates from the Commission's Order in that it seems to give Baltimore Company no credit for the adjustment of revenue made in the Commission's allocation for special facilities from Pennsylvania Railroad in the amount of $141,777 (Opinion No. 173, p. 142) and it also seems to eliminate the fuel rate adjustment clause contained in the existing Railroad contract. There may be other departures which Schedule D makes from the contracts and from your Commission's Orders. (Sub-par. (4) (a) and (b) seems to contemplate a hypothetical tax computation contrary to the contract and your Commission's Orders). Your Commission, in addition to establishing proper schedules for the Pennsylvania customers of Penn Water, should establish a schedule for service to Baltimore Company which completely preserves the existing contractual arrangement (Items H and I) as emphasized in its Opinions.

For all of the above reasons, the Maryland Commission calls upon the Federal Power Commission, under Paragraph E of its Order of January 5, 1949, to reject the schedules filed by Penn Water as not being in compliance with the orders under which they were filed and "in lieu

thereof to prescribe by further order the appropriate rates, charges, classifications, rules, regulations, practices, or contracts'' as will carry out the Orders of January 5, 1949 and January 31, 1949, as exemplified by the findings and opinions which were made part thereof.

Until the Federal Power Commission has issued such schedules, the Maryland Commission will reserve any detailed comments as to what they should be. We do urge that your Commission reconsider carefully the sections of the Maryland Commission's Brief contained between pages 4 to 18 and Baltimore Company's Brief, pages 6-49, particularly pp. 44-49. Your Commission did not see fit to allocate the entire reduction to Baltimore Company as was there argued, and to that extent in our judgment impaired the integrated operations of the combined system in the public interest. However, we believe that it was your intent to issue an Order which would preserve the general basic agreements between Penn Water, Safe Harbor, and Baltimore Company, and as between the several customers of Penn Water, apportion the reduction in the relative amounts indicated. In order to preserve integrated operations and to secure maximum utilization of the combined [26795] resources as contemplated by the basic system contracts (Items E, F, G, H, and I), it is essential that the ratio of the several reductions ordered to each of Penn Water's customers on a 1946 basis be preserved as fully as possible by the new schedules to these customers. The schedules filed by Penn Water frustrate this purpose, expand greatly the reduction afforded its Pennsylvania customers (by eliminating fuel rate adjustments), and carry out Penn Water's recently avowed effort (in the United States District Court proceeding in Baltimore before Judge William C. Coleman) to terminate the basic arrangements with Baltimore Company and Safe Harbor.

The schedules as filed should be rejected, and your Commission should prescribe schedules which will accom-

plish the original purposes of your Order, with which the Maryland Commission fully agrees.

Respectfully submitted,

CHARLES D. HARRIS,
Charles D. Harris,
General Counsel.

Federal Power Commission,
Washington—25, D. C.

Re: Docket No. IT-5915

Gentlemen:

This will acknowledge receipt of your letter of June 2, 1949 enclosing a copy of proposed Electric Tariff of Pennsylvania Water & Power Company, issued May 27, 1949, and a copy of the Commission's Order dated January 5, 1949.

In response to your request for our comments and suggestions, we respectfully submit that, in our opinion, the proposed Tariff should be rejected and proper schedules established by the Commission pursuant to Paragraph E of its above Order.

A memorandum covering in detail the requested comments and suggestions is enclosed herewith.

Very truly yours,

WM. SCHMIDT, JR.
President.

[26797]

COMMENTS AND SUGGESTIONS OF CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE WITH RESPECT TO PROPOSED FEDERAL POWER COMMISSION ELECTRIC TARIFF OF PENNSYLVANIA WATER AND POWER COMPANY ISSUED MAY 27, 1949

The proposed Tariff is improper because—

1. It contravenes the Commission's Orders and accompanying Opinions Nos. 173 and 173A;
2. It contravenes the provisions of the contract of June 1, 1931, as amended, between Penn Water and the Baltimore Company;
3. It purports to constitute a filing on behalf of Safe Harbor and of Baltimore Company without the authority, approval, or concurrence of either of those companies;
4. It is discriminatory against Baltimore Company in that it imposes on Baltimore Company all of the risks of changing costs of operation and none of such risks are shared by the other customers of Penn Water;
5. It is designed to implement the contentions of Penn Water in its pending litigation to strike down its contracts with the Baltimore Company contrary to the Commission's stated intention to preserve the basic arrangement under said contracts;
6. It will have the effect of disrupting the over-all economical operation of the integrated system established by those contracts and, therefore,
7. It is opposed to the public welfare.

We believe that the public welfare will best be served under present conditions if the new Tariff be required by the Commission to conform to the following (This suggés-

tion is made without prejudice to the Baltimore Company's contractual rights or to any future redetermination of rates by the Commission because of intervening economic factors.)":

1. The new Tariff should be restricted to rates of Penn Water only.

2. The new Tariff should continue in effect the present contracts, subject only to the reduction of Penn Water's rates and charges thereunder and to the ultimate determination [26798] by the Courts of the rights and obligations of the respective companies.

3. The new Tariff should establish rates which are just, reasonable, and non-discriminatory for *all* customers.

The following comments are in elaboration of the foregoing:

1. The new Tariff should be restricted to rates of Penn Water only.

Schedules A, B, and D

Schedules A, B, and D have been filed by Penn Water purportedly on behalf of itself and Safe Harbor and conditioned upon the concurrence of Safe Harbor. This was done without the authority, consent, or concurrence of Safe Harbor. Baltimore Company, as 2/3 equity owner of Safe Harbor, protests such filing.

Schedules A and B are in direct disregard of the Commission's Opinion No. 173 (pp. 11, 19, 20 and 21) and finding No. 15 of the Order of January 5, 1949. The Commission found that Safe Harbor's contractual status is a nominal one only, that it cannot sell to others what it has already sold in its entirety to Penn Water and Baltimore Company, and that Penn Water *alone* sells power and energy to M. E., P. E., and P. P. & L.

The references and provisions as to "joint services" in the Tariff as filed by Penn Water are also in direct disregard of the Commission's Opinion No. 143 and Order of November 4, 1946 in Docket No. IT-5914, in the matter of Safe Harbor Water Power Corporation, which Order is now on appeal before the United States Court of Appeals for the Third Circuit. Subparagraph (a) of the paragraph "Contracts" in Opinion No. 143 and Paragraph D of the Order hold that Safe Harbor "makes no sales" to the above mentioned companies and that Safe Harbor has only two customers, viz., Penn Water and Baltimore Company. They are also inconsistent with the Tariff filed by Safe Harbor pursuant to the above Order.

The references and provisions as to "joint services" are also contrary to the terms and provisions of the contract of June 1, 1931 between Baltimore Company, Safe Harbor, and Penn Water under which Safe Harbor sells all of its capacity and energy one-third to Penn Water and two-thirds to Baltimore Company.

Paragraphs C and D of the Order of January 5, 1949 ordered Penn Water *alone* to file schedules for service to its Pennsylvania customers and to Baltimore Company. Schedules A, B, and D violate this Order as well as the above referred to findings and opinions and they should be rejected.

[26799]

Schedule E

Schedule E has been filed purportedly on behalf of Baltimore Company without any advance notice to Baltimore Company. Baltimore Company protests the issuance of such schedule as being in violation of its 50-year contract with Penn Water and of the

Opinions and Orders of the Commission as discussed below.

2. The new Tariff should continue in effect the present contracts between Baltimore Company and Penn Water.

Opinion No. 173, in its entirety, shows that the Commission's Orders contemplate a continuance of the arrangement for system operations established by the 50-year basic contract entered into in 1931 between Penn Water and Baltimore Company and the companion agreement with Safe Harbor Water Power Corporation. At p. 167, the Commission said:

> "It is not feasible, because of the nature of Penn Water's operations, for the latter to assume firm commitments to all its customers, including Baltimore Company. The present arrangement whereby sales to Pennsylvania customers are made on a firm basis on definite rate schedules whereas Baltimore Company takes what is left and assures Respondents of the recovery of all proper operating expenses, depreciation, taxes and a fair return, is the most practicable under the circumstances. That arrangement will, therefore, be continued with, however, such modifications as are necessary to accomplish the reductions mentioned above to Pennsylvania Power & Light, Philadelphia Company, Metropolitan Company and Baltimore Company."

This was repeated with approval in Opinion No. 173A (p. 9) in response to Penn Water's assertion in its Petition for Rehearing that it was prepared to show that it had served notice of termination of said long-term contracts and had brought suit to establish their invalidity. Opinion No. 173A (pp. 5, 6, 8, and 9) further stated:

"The contracts which Penn Water by the *ex parte* action thus alleged has sought to terminate are the fifty-year foundation contracts referred to in our former opinion. Under those contracts the steam and hydroelectric generating capacity and transmission facilities of Baltimore Company, Penn Water, Susquehanna, and Safe [26800] Harbor, were designed and constructed, and for up to 17 years and more operated, so as to achieve close integration and coordination among all of the companies. We pointed out in our opinion that such pooling of Baltimore Company's steam capacity with the hydro capacity of the other companies resulted in a much more economical supply of the combined power requirements of all the companies, including supply to Pepco in the Washington area."

"The regional integration and coordination of facilities, the resulting economies, and the utilization and conservation of natural resources thus achieved are precisely what was sought to be encouraged and fostered by the Federal Power Act and established as a part of the criterion of the public interest to be served by regulation thereunder (Cf. Section 202 (a))."

"Now, by the changes referred to in Penn Water's application for rehearing, all of the carefully built-up benefits of pool design, investment, construction and operation apparently are intended to be sacrificed by Penn Water. Penn Water's non-receipt of steam generated energy from outside Pennsylvania for sale to resale customers would destroy the pool economies under the established method of operation."

There can be no doubt that the evidence before the Commission, including that submitted by officers of Penn Water (Baltimore Company's Brief, pp. 45-48) supports the above quoted conclusions of the Commission. The schedules filed by Penn Water, if received and made effective, would severely impair and perhaps destroy the integrated coordinated economical utilization of the combined resources which the Commission has found to be in the public interest. Penn Water has previously signified its disregard for this in its attempt to break its contracts with Safe Harbor and Baltimore Company and in its suit in the United States District Court for the District of Maryland referred to in Opinion No. 173A (p. 5). The schedules as filed are consistent parts of Penn Water's contentions rather than compliance with the Commission's Orders and Opinions 173 and 173A. This is particularly shown by Schedule E, but also manifests itself in all of the schedules.

Schedule E

This schedule was filed purportedly on behalf of Baltimore Company but without any advance notice to or consent of Baltimore Company. It is contrary to the 50-year contracts and is in contravention [26801] of the above quoted portions of the Commission's Opinions. The "option" which Schedule E would give Penn Water to receive or not to receive "backfeed" is directly contrary to the free flow of energy according to the requirements of over-all system economy, as is called for by the contracts and the Commission's Order. Also, the placing of a charge on "backfeed" is contrary to the 1931 agreement and would have no meaning because such a payment by Penn Water to Baltimore Company would merely "wash out" as an operating expense in the

power bill between Penn Water and Baltimore Company (T. 20, 191-93, Baltimore Company's Reply Brief, pp. 9-10).

Schedule E was not called for by the Commission's Orders, is directly contrary to them, and should be rejected.

Schedules A, B, and C

The very filing of Schedule E confirms the conclusion that all of the schedules have been filed by Penn Water in an attempt to avoid the Commission's intention to preserve the basic arrangements under the 50-year contracts. Schedules A, B, and C constitute part of this attempt in that they have been designed to give to the Pennsylvania customers larger reductions than were ordered, thereby causing a smaller reduction to Baltimore Company. Primarily by eliminating all fuel rate adjustments, Penn Water would increase the rate reductions to the Pennsylvania customers from $220,943 on a 1946 basis to $644,140 on a 1948 basis, with the reduction to Baltimore Company correspondingly curtailed. Through the handling of the Pennsylvania Railroad revenues in Schedule D, discussed hereinafter, Penn Water has also increased its own revenues by approximately $200,000 at the expense of Baltimore Company. Baltimore Company alone would have to bear *all* of the increased costs of service because the schedules to the other customers omit fuel rate adjustments. Baltimore Company has urged such adjustments under its right to approve the contracts with the Pennsylvania customers since it is the only party burdened by the charges to the Pennsylvania customers.

The proposed schedules would destroy the incentive for coordinated economical utilization of the combined resources and would foster the disintegra-

tion of the system now sought by Penn Water. This was not intended by the Orders and Opinions 173 and 173A and the intent of the Commission should be accomplished by the issuance of schedules which properly apportion cost variations between the several customers of Penn Water rather than burden Baltimore Company with them in their entirety. This can be done most simply by changing as little as possible the existing contracts to the Pennsylvania customers, continuing the existing fuel rate adjustments and adding such an adjustment to the P. P. & L. schedule to avoid a discrimination that otherwise exists in favor of that customer. (Exhibit A, enclosed herewith, has illustrative schedules following this approach but bringing the fuel [26802] rate adjustments to a 1946 base.) A similar result would be obtained by establishing demand and energy rates for each customer on a 1946 basis as in the schedules issued by Penn Water but including in the schedules fuel rate adjustments which move from a 1946 base. (Exhibit B filed herewith shows illustrative schedules of this type.) The existing fuel rate adjustment clauses could be continued as to type but adjusted to a 1946 base—or a uniform clause could be placed on each schedule. Under any of these several suggestions, the purpose of the Commission to preserve the existing integrated and coordinated operations of the combined system would be accomplished under just, reasonable, and non-discriminatory rates. (See discussion below under (3).)

Schedule D

This schedule ignores the contracts as well as the Commission's Orders and Opinions. It contains two unnecessary subparagraphs (4 (a) and (b)) which suggest a hypothetical tax computation

whereby Baltimore Company could become responsible for taxes not actually paid by Penn Water. This is contrary to the contracts and the Commission's Order. It is not called for by Finding No. 37 of the Order of January 5, 1949. Subparagraphs 4 (a) and (b) (on original sheets 13 and 14 of the Tariff as issued) should not have been included, and the parenthetical exception of "other than Federal and State taxes in respect to income" should not have been stated in subparagraph (2) (original sheet, p. 15).

The computation as to Pennsylvania Railroad revenues in subparagraph (3) on original sheet No. 14 also deviates from the Commission's Order and the long-term contracts. As in the case of the Pennsylvania customer contracts, the fuel rate adjustment has been omitted. Also, Baltimore Company does not receive proper credit for the adjustment made by the Commission in relation to special facilities (Opinion 173, p. 142) in the amount of $141,777. The attached Exhibits A and B show suggested treatments of the computation of the power bill to Baltimore Company which are in accord with Finding No. 37 and the Orders and Opinions 173 and 173A of the Commission in their entirety.

Schedule D, as issued, should be rejected and a proper schedule issued by the Commission.

3. The new Tariff should establish rates which are just, reasonable, and non-discriminatory.

It is the Commission's statutory duty to see that the rates and charges of licensees and of public utilities subject to its jurisdiction [26803] are just, reasonable, and non-discriminatory (Federal Power Act, Section 20 and Sections 205, 206; 16 USCA, Secs. 813, 824d, 824e). The Orders and Opinions

here in question were intended to carry out this duty.

The schedules filed by Penn Water so change the ratio of the allocation of the reduction between the several customers as made on a 1946 basis that they necessarily result in a discrimination against Baltimore Company and possibly as between the several Pennsylvania customers of Penn Water. The evidence before the Commission showed fuel-rate adjustments related to the service to the Pennsylvania Railroad, Philadelphia Electric Company, and Metropolitan Edison Company. There was no evidence or argument that any one of these adjustments resulted in unjust, unreasonable, or discriminatory rates to any of the customers involved. Nevertheless, without any direction from the Commission, Penn Water has eliminated these adjustments from the proposed schedules. It is submitted that either the existing fuel rate adjustments or appropriate modifications of them should be included in any schedules which are permitted finally to become effective.

As to the service to Pennsylvania Power & Light Company, Mr. Thomas testified on behalf of Baltimore Company that a defect of the existing contract is the absence of any automatic fuel rate adjustment provisions (T. 1275-76). The original 1912 agreement with that Company (Exhibit 136, Article IX) provided:

> "This contract shall automatically renew itself for a further period of ten (10) years duration, at the option of the Receiving Company, provided a readjustment of rate for power to be determined by arbitration is made if insisted upon by either party, such readjustment based upon any increase in the cost of steam generated

power which might then exist as compared with the cost of steam generated power as of date of this contract."

The present agreement (Exhibit 76, Article I) provides for the continuance of "said agreement of October 9, 1912, as herein modified or extended." Under these provisions, Baltimore Company at the expiration of any current terms of the P. P. & L. contract, in exercising its power of approval of any extension or new agreement, would ask that a fuel adjustment clause be added so that P. P. & L. Co., like all other customers, should carry its fair share of increasing costs. The Commission, in following the Davis study (Exhibit No. 421) in making its allocation of the rate reduction between the several customers, applied to each customer an energy charge for the steam energy received by that customer which purported to compensate fully for the costs of steam generation in Baltimore. The proper projection of that allocation as the basis for future rates would require that each Pennsylvania [26804] customer of Penn Water have a proper automatic fuel adjustment clause as part of its service schedule. Only in this manner can discrimination be avoided, and, as indicated in part (2) above, only in this manner can the integrated coordinated economical utilization of the system resources be preserved in the manner contemplated by the Commission's Orders.

As argued by the Maryland Commission and Baltimore Company, this integrated coordinated economical utilization of the system resources results from Baltimore Company's unusual position as system guarantor and residual beneficiary of system operations. This is impaired by any action (regulatory or otherwise) which reduces Baltimore Com-

pany's ability to supervise and control the sales of power from the system to the Pennsylvania customers of Penn Water. It could be eventually destroyed by regulation which gave such customers rates which were freed of relation to the changing costs of steam generation.

Accordingly, in order to foster the integrated, unified, and economical operation which the Commission's Orders call for, it is essential that the reductions to the Pennsylvania customers of Penn Water be accomplished by schedules which contain proper fuel rate adjustments. (The attached Exhibits A and B contain illustrative schedules consistent with the Commission's Orders and Opinions which accomplish this result.)

[26805]

EXHIBIT A

Schedule A

RATE SCHEDULE A, Pennsylvania Power & Light Company

Pursuant to the Commission's Order issued January 5, 1949, the rate provisions of Article VI of the contract between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation and Pennsylvania Power & Light Company dated May 1, 1933, as supplemented and amended by Section (13) of the Letter-Agreement dated April 28, 1939 entitled "Credit for Greater Utilization of Generating Companies' Present Facilities" are hereby revised to read as shown below under the caption "Rates". All other provisions of said agreement as supplemented and amended, including amendment by the Letter-Agreement dated Feb. 19, 1946, remain unchanged.

RATES

The rates to be paid by Pennsylvania Power & Light Company to Pennsylvania Water & Power Company for power and energy shall be as follows:

6.10 mills per kilowatthour for the first 13.5 million kilowatthours of Lancaster Load Requirement supplied hereunder in each month.

6.0 mills per kilowatthour for all Lancaster Load Requirement supplied hereunder in excess of 13.5 million kilowatthours in each month.

3.5 mills per kilowatthour of Excess Energy supplied hereunder.

The above rates shall be subject to a fuel rate adjustment * determined in the following manner:

The monthly fuel rate adjustment will apply to the total Lancaster Load Requirement and Excess Energy supplied under this Contract; will be based on the proportion of steam-electric generation to the total generation of a combined system (which for this purpose includes the power systems of Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation and Consolidated Gas Electric [26806] Light and Power Company of Baltimore) after adjustment for power interchange transactions by Pennsylvania Water & Power Company; will vary with the average pounds of coal used per kwh. (station send-out) in all of the steam-electric generating plants of the Consolidated Gas Electric Light and Power Company of Baltimore; and will vary with the increase or decrease in the average cost of coal as reported monthly by Consolidated Gas Electric Light and Power Company of Baltimore to the Public Service Commission of Maryland from a base price of $6.41 per net ton (1946 weighted average). The details of such monthly fuel rate adjustment computations are shown on the table below and will apply so long as the average price of coal per net ton during any month as reported by Consolidated Gas Electric Light and Power Company of Baltimore to the Public Service Commission of Maryland exceeds $6.66 or is less than $6.16 per net ton.

---

* This is the Coatesville fuel rate adjustment formula adjusted to 1946 cost base.

Fuel Rate Adjustment Under Lancaster Power Supply Contract

$$\text{A. Ratio} = \frac{\text{Net Steam Generation}^{*}}{\text{Net Total Generation}^{**}} \quad \%$$

B. Total Lancaster Load Requirement and Excess Energy supplied kwh.

C. Average Pounds Coal per kwh. (Baltimore Steam Plants) #/kwh.

D. Cost of Coal per Net Ton (in bunkers of Baltimore steam plants) $

E. Variation in Dollars per Net Ton from $6.41 base price $

$$\text{Fuel Rate Adjustment} = A \times B \times C \times \frac{E}{2000} = \$$$

* Total Baltimore and Holtwood net steam generation less steam interchange sales to Pennsylvania ties plus steam interchange purchased from Pennsylvania ties.

** Total steam and hydro net generation less all interchange sales to Pennsylvania ties; plus all interchange purchased from Pennsylvania ties.

[26807]

EXHIBIT A

Schedule B

RATE SCHEDULE B, Philadelphia Electric Company

Pursuant to the Commission's Order issued January 5, 1949, the rate provisions of the contract between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation and Philadelphia Electric Company, dated August 1, 1933, as supplemented and amended by agreement dated December 13, 1938, and by letters between the parties dated February 8, 1944 and February 9, 1944, are hereby revised to read as set forth below under the caption "Rates". All other provisions of said agreement as supplemented and amended shall remain unchanged.

RATES

Philadelphia Electric Company shall pay Pennsylvania Water & Power Company for electrical supply described in Article II, Section 1 of the contract as amended by Sections 2 and 3 of the Agreement of December 13, 1938, a Demand Charge, an Energy Charge, and a Transmission Charge according to the following schedules:

Demand Charge

$1.35 per month per kilowatt for the first 2,500 kilowatts of Billing Demand.

$1.05 per month per kilowatt of Billing Demand above 2,500 kilowatts.

Energy Charge

3.83 mills per kilowatthour for the first 150 kilowatthours per month per kilowatt of the monthly maximum demand.

3.33 mills per kilowatthour for the next 250 kilowatthours per month per kilowatt of the monthly maximum demand.

2.83 mills per kilowatthour for all excess kilowatthours.

The above energy charges shall be subject to a fuel rate adjustment as set forth in the exchange of letters between the parties dated February 8, 1944 and February 9, 1944, except that the base coal price shall be $6.44 per net [26808] ton instead of $4.25 and shall apply only so long as the average price of coal per net ton during any month as reported by Consolidated Gas Electric Light and Power Company of Baltimore to the Public Service Commission of Maryland exceeds $6.69, or is less than $6.19 per net ton.

Transmission Charge

$5000.00 per month.

Note: If it is desired to retain the present base price of $4.25 per net ton in the fuel rate adjustment formula, the above energy rates must be further reduced by 0.67 mill per kwh.

[26809]

EXHIBIT A

Schedule C

RATE SCHEDULE C, Metropolitan Edison Company

Pursuant to the Commission's Order issued January 5, 1949, the rate provisions of Article V, Section 5 of the contract dated November 15, 1945 between Pennsylvania Water & Power Company and Metropolitan Edison Company are hereby revised to read as set forth below under the caption "Rates". All other provisions of said contract, including the provisions of Sections 1, 2, 3, 4, 6 and 7 of Article V, shall remain unchanged.

RATES

Article V, Section 5, is revised to read as follows:

The monthly energy charges specified in Sections 3 and 4 hereof shall be subject to monthly adjustment based upon changes in cost of fuel to Metropolitan. The charges per kilowatthour in any month shall be increased or decreased one (1) per cent for each ten (10) cent increase above or decrease below $5.90 per net or short ton in the average cost of bituminous coal and freight only, on hand and delivered at Metropolitan's steam generating stations during the second preceding calendar month.

Note: If it is desired to retain the present base price of $5.00 per net ton in the fuel rate adjustment it would be necessary to reduce each of the energy rates in Article V, Section 3 by 0.29 miles per kwh.

[26810]

EXHIBIT A

Schedule D

RATE SCHEDULE D, Consolidated Gas Electric Light & Power Company of Baltimore

Pursuant to the Commission's Order issued January 5, 1949, all rate provisions of the contract between Pennsylvania Water & Power Company (hereinafter referred to as Holtwood Company) and Consolidated Gas Electric Light and Power Company of Baltimore (hereinafter referred to as Baltimore Company) dated December 31, 1927, as supplemented and amended by agreements dated December 27, 1928, June 1, 1931 and September 29, 1939, are hereby amended as set forth below under the caption "Rates". All other provisions of said contract as supplemented and amended shall remain unchanged.

RATES

The gross annual charge by Holtwood Company to Baltimore Company under this contract, without regard to the amount of energy, capacity or other services or facilities actually furnished, shall be computed in accordance with the following formula:

(A) Add the following amounts:

(1) 5¼% of the rate base computed in accordance with paragraph (35) of the findings contained in the Order of the Federal Power Commission issued January 5, 1949 in its Docket No. IT-5915.

(2) All reasonable and necessary operating expenses of Holtwood Company (including taxes and payments by Holtwood Company

for power and energy purchased from Safe Harbor Water Power Corporation and others) and depreciation expenses calculated as referred to in paragraphs (27) and (28) of such findings in such Order.

(B) Deduct the sum of the following amounts from the sum of the amounts in paragraph (A) above:

(1) The Conowingo backwater payment.

(2) All electric revenues received from others, including Metropolitan Edison Company, Philadelphia Electric Company, Pennsylvania Power & Light Company, but excluding revenue received from the Pennsylvania Railroad Company.

(3) To the extent Holtwood Company receives any revenue from [26811] the Pennsylvania Railroad, the amount computed by deducting the amount of $141,777 (revenue received by Holtwood Company for special facilities for services to Pennsylvania Railroad in Maryland) from the product obtained by multiplying

(a) the total kilowatthours of energy sold by Holtwood Company to Pennsylvania Railroad (determined in accordance with the Operating Committee Agreement of March 3, 1937, Exhibit #470 IT-5915)

by

(b) a rate in mills per kilowatthour obtained by subtracting 1.042 mills per kilowatthour from the rate obtained by dividing

(1) the total amount of revenues received by Baltimore Company under the contract with Pennsylvania Railroad

dated September 2, 1931 as amended by supplemental agreements dated August 15, 1934 and June 22, 1938 on behalf of the supplying companies

by

(2) the total kilowatthours delivered to the Pennsylvania Railroad under said contract.

(4) The income taxes associated with revenues received by Holtwood Company from Pennsylvania Railroad in excess of the deduction computed under item (3) above.

The net payment to be made by Baltimore Company to Holtwood Company shall be determined by crediting the following amounts against the gross annual charge by Holtwood Company to Baltimore Company computed as set forth above:

1. The net revenue received by Holtwood Company from interchange power transaction. (This credit necessary only if not included in A (2) or B (2) above. See Opinion #173, p. 142.)
2. The amount of $141,777 paid by Baltimore Company (through normal allocation of Railroad revenue) to Holtwood Company for special facilities for service to Pennsylvania Railroad in Maryland. (See Opinion #173, p. 142.)

If the sum of the credits exceeds the gross annual charge by Holtwood Company, the excess of such credits shall be paid by Holtwood Company to Baltimore Company.

The annual amount to be paid hereunder shall be estimated by the parties hereto in advance, and shall be paid as nearly as possible in equal monthly installments, with subsequent adjustment to the correct yearly payments.

[26812]

Exhibit B

Schedule A

RATE SCHEDULE A, PENNSYLVANIA POWER & LIGHT COMPANY

Pursuant to the Commission's Order issued January 5, 1949, the rate provisions of Article VI of the contract between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation and Pennsylvania Power & Light Company dated May 1, 1933, as supplemented and amended by section (5) entitled "Continuation of 4,000 Volt Service at Holtwood Power House", section (7) entitled "Manor Substation and Transmission Line" and section (13) entitled "Credit for Greater Utilization of Generating Companies' Present Facilities" of the Letter Agreement dated April 28, 1939, are hereby revised to read as shown below under the caption "Rates." All other provisions of said agreement as supplemented and amended, including amendment by the Letter Agreement dated February 19, 1946, remain unchanged.

Rates

The rates to be paid by Pennsylvania Power & Light Company to Pennsylvania Water & Power Company for power, energy and special facilities shall be as follows:

Demand Charge:

$1.38 per month per kilowatt of Billing Demand.

Energy Charge:

2.5 mills per kilowatthour for the Lancaster Load Requirements and Excess Energy supplied, except 4,000 volt service at Holtwood.

6.0 mills per kilowatthour for 4,000 volt service at Holtwood.

Reactive Charge:

0.2 mills per lagging reactive kilovolt-ampere-hour for all such kilovolt-ampere-hours supplied per month numerically in excess of 50% of the kilowatthours of energy supplied under this rate schedule in that month.

[26813]

Special Facilities Charge:

$965 per month.

Billing Demand:

The billing demand in any month shall be the maximum power requirement of the services specified in the existing contract (excluding Excess Energy under Article IV of the contract dated May 1, 1933), measured on a clock one-hour integrated basis in units of 1,000 kilowatts (1,000 kwh. per hour) during that month or the preceding eleven months. The 4,000-volt service at Holtwood is excluded in the determination of the Billing Demand.

Fuel Rate Adjustment:*

The energy charge specified above shall be subject to fuel rate adjustment as follows:

The monthly fuel rate adjustment will apply to the total Lancaster Load Requirement, Excess Energy and 4,000 Volt Service supplied under this contract; will be based on the proportion of steam-electric generation to the total generation of a combined system (which for this purpose includes the power systems of Pennsylvania Water & Power Company, Safe Harbor Water Power

---

* This is the Coatesville fuel rate adjustment formula adjusted to 1946 cost base.

Corporation and Consolidated Gas Electric Light and Power Company of Baltimore) after adjustment for power interchange transactions by Pennsylvania Water & Power Company; will vary with the average pounds of coal used per kwh. (station sendout) in all of the steam-electric generating plants [26814] of the Consolidated Gas Electric Light and Power Company of Baltimore; and will vary with the increase or decrease in the average cost of coal as reported monthly by Consolidated Gas Electric Light and Power Company of Baltimore to the Public Service Commission of Maryland from a base price of $6.41 per net ton (1946 weighted average). The details of such monthly fuel rate adjustment computations are shown on an attached sheet and will apply so long as the average price of coal per net ton during any month as reported by Consolidated Gas Electric Light and Power Company of Baltimore to the Public Service Commission of Maryland exceeds $6.66 or is less than $6.16 per net ton.

[26815]

FUEL RATE ADJUSTMENT UNDER LANCASTER POWER SUPPLY CONTRACT

$$A\text{—Ratio} = \frac{\text{Net Steam Generation}^*}{\text{Net Total Generation}^{**}} \quad \%$$

B—Total Lancaster Load Requirements and Excess Energy and 4000 volt service supplied kwh.

C—Average Pounds Coal per kwh. (Baltimore Steam Plants) #/kwh.

D—Cost of Coal per Net Ton (in bunkers of Baltimore steam plants) $

E—Variation in Dollars per Net Ton from $6.41 base price $

$$\text{Fuel Rate Adjustment} = A \times B \times C \times \frac{E}{2000} = \$$$

*Total Baltimore and Holtwood net steam generation.

Less steam interchange sales to Pennsylvania ties.

Plus steam interchange purchased from Pennsylvania ties.

**Total steam and hydro net generation

Less all interchange sales to Pennsylvania ties.

Plus all interchange purchased from Pennsylvania ties.

[26816]

Exhibit B

Schedule B

RATE SCHEDULE B, PHILADELPHIA ELECTRIC COMPANY

Pursuant to the Commission's Order issued January 5, 1943, the provisions of Sections 1, 2 and 4 of Article III of the contract between Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation and Philadelphia Electric Company, dated August 1, 1933, as supplemented and amended by agreement dated December 13, 1938, and by letters between the parties dated February 8, 1944 and February 9, 1944, are hereby revised to read as set forth below under the caption "Rates." All other provisions of said agreement as supplemented and amended shall remain unchanged.

Rates

Philadelphia Electric Company shall pay Pennsylvania Water & Power Company for electrical supply described in Article II, Section 1 of the contract as amended by Sections 2 and 3 of the agreement of December 13, 1938, a Demand Charge, an Energy Charge, a Reactive Charge and a Transmission Charge according to the following schedule:

Demand Charge:

$1.38 per month per kilowatt of Billing Demand.

Energy Charge:

2.5 mills per kilowatthour.

Reactive Charge:

0.2 mills per lagging reactive kilovolt-ampere-hour for all such kilovolt-ampere-hours supplied per month numerically in excess of 50% of the kilowatthours of energy supplied under this rate schedule in that month.

Special Facilities Charge:

$6,559.00 per month.

Billing Demand:

The Billing Demand in any month shall be an amount equal [26817] to the maximum power requirement of the services specified in the existing service contract (excluding emergency supply under Article II, Section 2 of the contract dated August 1, 1933), measured on a clock one-hour integrated basis in units of 1,000 kilowatts (1,000 kwh. per hour) during that month or the preceding eleven months.

Fuel Rate Adjustment:

The above energy charges shall be subject to a fuel rate adjustment as provided for in Article II, Section 4 of the contract and as set forth in the exchange of letters between the parties dated February 8, 1944 and February 9, 1944, except that the base coal price shall be $6.44 per net ton instead of $4.25 and shall apply only so long as the average price of coal per net ton during any month as reported by Consolidated Gas Electric Light and Power Company of Baltimore to the Public Service Commission of Maryland exceeds $6.69 or is less than $6.19 per net ton.

[26818]

Exhibit B

Schedule C

RATE SCHEDULE C, METROPOLITAN EDISON COMPANY

Pursuant to the Commission's Order issued January 5, 1949, the rate provisions of Articles V and VI of the contract dated November 15, 1945 between Pennsylvania Water & Power Company and Metropolitan Edison Company are hereby revised as set forth under the caption "Rates." All other provisions of said contract shall remain unchanged.

Rates

The rates for service under this rate schedule are as follows:

Demand Charge:

$1.38 per month per kilowatt of specified firm power.

$0.40 per 1,000 kilowatts of spinning reserve capacity for each clock hour in which such capacity is provided.

Energy Charge:

(a) 3.5 mills per kilowatt hour for energy supplied in any month in the portion of the customer's total requirements above its steam line.

(b) 2.75 mills per kilowatt hour for energy supplied in any month, between the hours of 7 a.m. and 9 p.m. Eastern Standard Time, or Daylight Saving Time when in effect, on all days except Sundays and holidays in the customer's specified area, in excess of energy billed under Section (a) above.

(c) 2.0 mills per kilowatt hour for all additional energy supplied in any month in excess of energy billed under Sections (a) and (b) above.

Reactive Charge:

0.2 mills per lagging reactive kilovolt-ampere-hour for all such kilovolt-ampere-hours supplied per month numerically in excess of 50% of the kilowatt hours [26819] of energy supplied under this rate schedule plus kilowatt hours use of spinning reserve capacity in that month.

Special Facilities Charge:

$2,751.00 per month.

Fuel Rate Adjustment:

The above energy charges shall be subject to monthly adjustment based upon changes in cost of fuel to Metropolitan Edison Company. The charges per kilowatt hour in any month shall be increased or decreased one (1) per cent for each ten (10) cent increase above or decrease below $6.00 per net or short ton in the average cost of bituminous coal and freight only, on hand and delivered at Metropolitan's steam generating stations during the second preceding calendar month.

[26820]

Exhibit B

Schedule D

RATE SCHEDULE D, CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE

Pursuant to the Commission's Order issued January 5, 1949, all rate provisions of the contract between Pennsylvania Water & Power Company (hereinafter referred to as Holtwood Company) and Consolidated Gas Electric Light and Power Company of Baltimore (hereinafter referred to as Baltimore Company) dated December 31, 1927, as supplemented and amended by agreements dated December 27, 1928, June 1, 1931 and September 29, 1939, are hereby amended as set forth below under the caption "Rates". All other provisions of said contract as supplemented and amended shall remain unchanged.

Rates

The gross annual charge by Holtwood Company to Baltimore Company under this contract, without regard to the amount of energy, capacity or other services or facilities actually furnished, shall be computed in accordance with the following formula:

(A) Add the following amounts:

(1) 5¼% of the rate base computed in accordance with paragraph (35) of the findings contained in the Order of the Federal Power Commission issued January 5, 1949 in its Docket No. IT-5915.

(2) All reasonable and necessary operating expenses of Holtwood Company (including taxes and payments by Holtwood Company for power and energy purchased from Safe Harbor Water Power Corporation and others)

and depreciation expenses calculated as referred to in paragraphs (27) and (28) of such findings in such Order.

(B) Deduct the sum of the following amounts from the sum of the amounts in paragraph (A) above:

(1) The Conowingo backwater payment.

(2) All electric revenues received from others, including Metropolitan Edison Company, Philadelphia Electric Company, Pennsylvania Power & Light Company, but excluding revenue received from the Pennsylvania Railroad Company.

[26821]

(3) An amount, to the extent Pennsylvania Water & Power Company receives any revenue from the Pennsylvania Railroad, computed as the sum of:

(a) 1.657 mills per kilowatt hour [illegible]es the portion of the annual energy supplied in Pennsylvania to the Pennsylvania Railroad, under a contract dated September 2, 1931, as amended by agreements dated August 15, 1934 and June 22, 1938, between The Pennsylvania Railroad Company, the issuing company, Safe Harbor Water Power Corporation and others.

(b) $16.61 per kilowatt per year times the portion of the total billing demand of the Pennsylvania Railroad supply under the contract referred to in paragraph (a), which portion of the demand is to be the annual maximum among the products for each month of the year of the monthly billing demand and the ratio for that month of the energy supplied to the Penn-

sylvania Railroad in Pennsylvania to the total energy supplied to the Pennsylvania Railroad under such contract.

(c) An annual amount of $109,289.

(d) The portion of the annual fuel rate adjustment, billed to the Pennsylvania Railroad under the contract referred to in paragraph (a), applicable to energy supplied to the Pennsylvania Railroad in Pennsylvania; said portion to be determined as the sum of the products for each month of the total monthly fuel rate adjustment and the ratio for that month of the energy supplied to the Pennsylvania Railroad in Pennsylvania to the total energy supplied to the Pennsylvania Railroad under the contract.

(4) The income taxes associated with revenues received by Holtwood Company from Pennsylvania Railroad in excess of the deduction computed under item (3) above.

The net payment to be made by Baltimore Company to Holtwood Company shall be determined by crediting the following amounts against the gross annual charge by Holtwood Company to Baltimore Company computed as set forth above:

1. The net revenue received by Holtwood Company from interchange power transaction. (This credit necessary only if not included in A (2) or B (2) above. See Opinion #173, p. 142).
2. The amount of $141,777 paid by Baltimore Company (through normal allocation of Railroad revenue) to Holtwood Company for special facilities for service to Pennsylvania Railroad in Maryland. (See Opinion #173, p. 142).

If the sum of the credits exceeds the gross annual charge by Holtwood Company, the excess of such credits shall be paid by Holtwood Company to Baltimore Company.

[26822]

The annual amount to be paid hereunder shall be estimated by the parties hereto in advance, and shall be paid as nearly as possible in equal monthly installments, with subsequent adjustment to the correct yearly payments.

Letter to Federal Power Commission from Pennsylvania Water & Power Company, dated June 24, 1949, objecting to comments of Consolidated Gas Electric Light and Power Company of Baltimore.

Re: Docket No. IT-5915
Mr. Leon M. Fuquay, Secretary
Federal Power Commission
Washington—25, D. C.
Dear Sir:

Under date of June 21, 1949, we received from Consolidated Gas Electric Light and Power Company of Baltimore a copy of its letter to you with attached memorandum relating to the proposed electric tariff of respondent company, issued May 27, 1949, in the above docket number.

We wish to advise the Commission that we find such comments of Consolidated Gas Electric Light and Power Company of Baltimore erroneous and its suggestions contrary to Order and Opinion No. 173 of the Commission dated January 5, 1949.

Yours very truly,

G. W. SPAULDING
G. W. Spaulding

IN THE

United States Court of Appeals

FOR THE DISTRICT OF COLUMBIA CIRCUIT.

No. 10236.

PENNSYLVANIA WATER & POWER COMPANY, A CORPORATION, AND SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND, A CORPORATION,
Petitioners,

v.

FEDERAL POWER COMMISSION,
Respondent.

PETITION FOR REVIEW.

(Filed April 22, 1949.)

To the Honorable, the Judges of the United States Court of Appeals for the District of Columbia Circuit:

PENNSYLVANIA WATER & POWER COMPANY (Penn Water), Petitioner, being aggrieved on its own behalf by an "Order Reducing Rates", issued by the Federal Power Commission (the Commission) January 5, 1949, being so aggrieved by an order issued February 28, 1949, denying rehearing of and amending the order issued January 5, 1949, and amending an order issued January 31, 1949, and being so aggrieved by an order issued March 17, 1949, denying rehearing of the order issued February 28, 1949, all of which orders were issued by the Commission in its Docket No. IT-5915; Penn Water being separately and independently so aggrieved by such orders as the owner of one-half of the Class B voting stock of Safe Harbor Water Power Corporation (Safe Harbor), said Safe Harbor being unable to intervene in this proceeding to protect its interests because of a deadlock in its Board of Directors, as set forth in Petitioners' Application for Rehearing of the Com-

mission's order of January 5, 1949, to be hereinafter referred to; and Penn Water also being separately and independently so aggrieved by such orders as agent for and on behalf of Safe Harbor under the provisions of certain contracts for joint services rendered to Pennsylvania Power & Light Company (PP & L) and Philadelphia Electric Company (Philadelphia Company); and SUSQUEHANNA TRANSMISSION COMPANY OF MARYLAND (Transmission Company), Petitioner, also being aggrieved by such orders; hereby file this their Petition for Review under Section 313 (b) of the Federal Power Act (16 U. S. C. § 825-l (b); 49 Stat. 860), and pursuant to Rule 38 of this Court, to review, hold unlawful, and set aside such orders of January 5, 1949, February 28, 1949, and March 17, 1949, certain findings and conclusions incorporated therein, and certain preliminary, procedural, and intermediate orders, actions and rulings of the Commission in its Docket No. IT-5915, in accordance with the provisions of Section 10 of the Administrative Procedure Act (5 U. S. C. § 1009; 60 Stat. 243); and Petitioners represent and show to the Court:

The Nature of the Proceedings as to Which Review Is Sought.

I. Petitioner, Penn Water, is a corporation organized under the laws of the Commonwealth of Pennsylvania, and owns and operates a hydro-electric generating plant and a steam-electric generating plant on the Susquehanna River at Holtwood, Pennsylvania; and it also owns and operates electric transmission lines wholly within Pennsylvania radiating therefrom. It generates, transmits, distributes, and renders hydro and steam electric power and other services for use in public service. Construction of Penn Water's hydro-electric generating plant began in 1905 and commercial operation began in 1911. On November 3, 1939, the Commission found and required that Penn Water should apply for and obtain a license from the Commission for

its then existing hydro-electric project under the provisions of Part I of the Federal Power Act (16 U. S. C. §§ 791a *et seq.;* 41 Stat. 1063; 46 Stat. 797; 49 Stat. 838). After application the Commission ordered a license issued on November 23, 1943, but such order was stayed by the Commission on application for rehearing by Penn Water with respect to certain of the conditions imposed by the Commission.

II. Petitioner, Transmission Company, is a corporation organized under the laws of the State of Maryland, a wholly owned subsidiary of Penn Water, and owns transmission lines wholly within Maryland, some of which are connected to the transmission lines of Penn Water at the Pennsylvania-Maryland State line.

III. Safe Harbor is a Pennsylvania corporation, and owns and operates a hydro-electric generating plant, on the Susquehanna River in Pennsylvania, a short distance above the Holtwood Plant of Penn Water. Its hydro-electric plant is connected to the Holtwood plant by means of the transmission lines of Penn Water; and all of the output generated at the Safe Harbor plant is received on and transmitted by the transmission lines of Penn Water. Penn Water and Consolidated Gas Electric Light & Power Company of Baltimore (Baltimore Company) each owns one-half of the voting stock of Safe Harbor; and membership on the Safe Harbor Board of Directors is divided evenly between nominees of each of the two stockholders.

IV. Penn Water and Safe Harbor have entered into a number of contracts for the purchase or exchange of energy, for the rendering of transmission and other services, and for the disposition of the electrical resources available at their respective plants.

V. Penn Water, Safe Harbor, and Baltimore Company, with a specified participation by Potomac Electric Power Company (PEPCO), are jointly obligated under a contract with The Pennsylvania Railroad Company (Railroad) for

the furnishing of services to the Railroad for electrified railroad use in specified areas in Pennsylvania and Maryland. The revenues are collected under this contract by Baltimore Company as agent for the other suppliers, and divided between Penn Water and Baltimore Company by a separate agreement.

VI. Penn Water and Safe Harbor are jointly obligated under a contract with PP & L for the furnishing of services to PP & L in its Lancaster and Harrisburg, Pennsylvania, territories. Penn Water and Safe Harbor are also jointly obligated under a contract with Philadelphia Company for the furnishing of services to the latter in its Coatesville, Pennsylvania territory. Revenues from these two contracts are collected by Penn Water as agent for Safe Harbor. Safe Harbor receives its revenues for its services rendered under these contracts, as well as the services it renders under the Railroad contract and all of its other contracts, under a three-party contract between Penn Water, Baltimore Company, and Safe Harbor, hereinafter referred to.

VII. Penn Water furnishes services to Metropolitan Edison Company (Metropolitan Company) under a contract for the supply of such services to Metropolitan Company in a specified area in Pennsylvania. Penn Water, and in some cases Safe Harbor, are parties to other ancillary contracts providing for interchange of energy and coordination of services and facilities between the parties.

VIII. Under an agreement dated December 31, 1927, as amended on December 27, 1928, June 1, 1931, and September 29, 1939, Penn Water agreed to furnish certain services including the use by Baltimore Company of certain specified facilities, and agreed to supply Baltimore Company all electrical capacity and energy available to Penn Water at its Holtwood plant and from Safe Harbor (under the three-party contract next referred to), not otherwise disposed of under other contracts. Baltimore

Company agreed to pay specified amounts in accordance with a formula set forth therein, without regard to the amount of electrical services received. Baltimore Company also agreed to supply, at Penn Water's request, steam-generated electric energy under specified conditions and at a specified cost rate, plus ten per cent, applied to the daily net amount of backfeed supplied.

IX. On June 1, 1931, the same date as a substantial amendment of the foregoing two-party agreement between Penn Water and Baltimore Company, and when all three parties were affiliated under common control, Safe Harbor, Penn Water, and Baltimore Company also entered into a three-party contract. This three-party contract, as supplemented by amendments dated August 1, 1932, and November 22, 1939, provided for the payment to Safe Harbor by Penn Water and Baltimore Company, in specified proportions, of all costs of Safe Harbor, plus a specified return, less revenues received from others, without regard to the amount of power actually furnished. The contract provided for the entitlement by Penn Water and Baltimore Company, in specified proportions, to all of the capacity and daily energy available from the Safe Harbor plant, after deducting the capacity and energy required for the performance of the duties or obligations to serve imposed on Safe Harbor by its charter or otherwise by law. Safe Harbor, with the written consent of Baltimore Company and Penn Water, obligated itself to render services under the contracts with the Railroad, PP & L, and Philadelphia Company. As a part of the provisions of the three-party contract Penn Water agreed to construct transmission facilities between Safe Harbor and Baltimore Company, and to transmit under certain conditions and limitations any energy sold by Safe Harbor to Baltimore Company.

X. By order dated September 1, 1944, the Commission issued and instituted in its Docket No. IT-5915 a general order of investigation to determine whether any rates, charges, classifications, rules, regulations, practices, or con-

tracts of Penn Water, subject to the jurisdiction of the Commission, are unjust, unreasonable, unduly discriminatory, or preferential. There was no specification of which of Penn Water's rates, charges, etc., were subject to the jurisdiction of the Commission; nor was there any specification of the issues with respect to any of its rates, charges, etc. On the same date, in a separate Docket No. IT-5914, the Commission instituted a similar general investigation with respect to Safe Harbor. By order dated October 3, 1944, the proceeding in Docket No. IT-5915 was enlarged to include Transmission Company as a respondent. The Pennsylvania Public Utility Commission (Pennsylvania Commission), the Public Service Commission of Maryland (Maryland Commission), and Baltimore Company were permitted to intervene in Docket No. IT-5915. Prior to commencement of hearings Penn Water filed a Petition with the Commission requesting dismissal of the proceeding or in any event specification of the issues. This Petition was denied by order of the Commission dated April 5, 1946. Hearings began on April 15, 1946, and were closed on July 16, 1947. Copies of the said Commission orders of September 1, 1944, October 3, 1944, and April 5, 1946, are attached hereto and made a part hereof as Exhibits A, B, and C, respectively.

XI. By its order issued November 4, 1946, in its Docket No. IT-5914, the Commission required Safe Harbor to reduce substantially its revenues received from Penn Water and Baltimore Company under the three-party contract between them. The validity of that order of the Commission is now the subject of a petition for review pending before the United States Court of Appeals for the Third Circuit (*Safe Harbor Water Power Corp. v. Federal Power Commission*, No. 9345).

XII. By two orders dated September 27, 1948, the Pennsylvania Commission, in an investigation in its Docket No. 14028, instituted on December 5, 1944, fixed temporary rates and charges for the joint intrastate services of Penn

Water and Safe Harbor to PP & L, Philadelphia Company, and the Railroad, and for the intrastate services of Penn Water to Metropolitan Company. Baltimore Company intervened in that proceeding as a stockholder of Safe Harbor. The Pennsylvania Commission found that Safe Harbor and Penn Water operated an integrated and coordinated system in rendering intrastate services to their Pennsylvania customers, and that its jurisdiction to regulate so much of such intrastate services was unaffected by any proceedings or orders of the Federal Power Commission, or any other regulatory authority, properly limited to interstate services. Copies of such Pennsylvania Commission orders are attached as Exhibits to Petitioners' Application for Rehearing of the Commission's order of January 5, 1949, to be hereinafter referred to. The orders of the Pennsylvania Commission are the subject of a complaint by Baltimore Company now pending before the United States District Court for the Middle District of Pennsylvania. (*Consolidated Gas Electric Light & Power Company of Baltimore v. Pennsylvania Public Utility Commission, et al.*, Civil Action No. 3274).

XIII. In December, 1948, in litigation instituted sometime prior thereto before the United States District Court for the District of Maryland (*Pennsylvania Water & Power Co. v. Consolidated Gas Electric Light and Power Company of Baltimore*, Civil Action No. 4179), Penn Water filed an amended complaint requesting a declaratory order declaring the two-party contract between Penn Water and Baltimore Company null, void and unenforceable as *ultra vires*, contrary to public policy, and as constituting an agreement in unreasonable restraint of trade, and unreasonably restricting competition in the generation and sale of electrical services, and unreasonably limiting the output of electrical energy, contrary to the laws of the United States, Pennsylvania, and Maryland. In this connection Baltimore Company has refused to permit expansion of Penn Water's facilities necessary for adequate service to

its customers, has attempted to compel termination of the services of Penn Water and Safe Harbor to their Pennsylvania customers, and has otherwise interfered with the rendering of adequate service by Penn Water and Safe Harbor to their customers. The contract was terminated by Penn Water by notice dated December 20, 1948, for the foregoing reasons and because of material breaches of the terms of the contract. Such litigation is now pending in the District Court.

XIV. By its order issued January 5, 1949, and accompanying Opinion No. 173, in its Docket No. IT-5915, the Federal Power Commission, asserted jurisdiction to regulate the revenues derived from the entire services rendered by Penn Water from plants in Pennsylvania (except to the Railroad) to PP & L, Philadelphia Company, and Metropolitan Company in Pennsylvania, as well as to Baltimore Company in Maryland. The revenue reductions required by the Commission's order to the Pennsylvania customers were substantially different from the revenue changes arising out of the temporary rates and charges fixed by the Pennsylvania Commission and result in a direct conflict between the two commission orders. By the Federal Power Commission Order, Penn Water was required to file its individual tariffs effecting the reductions in revenues ordered, without regard to the joint obligations of Safe Harbor to render services to certain of the Pennsylvania customers. and without regard to the fact that Penn Water is unable to assume and render service to its Pennsylvania customers as its sole obligation. The reduction in revenues for service by Penn Water to Baltimore Company, required by such Order, was based almost entirely upon an increase allowed by the Commission in the rates or charges of Baltimore Company for purported services by Baltimore Company to Penn Water. Such increase was allowed as a credit to Baltimore Company by offset against the costs found by the Commission to be allocable to the services rendered by Penn Water to Baltimore Company. The Commission's

determination of the allocation of Penn Water's costs incurred and revenues received in rendering service to its various customers was based upon the Commission's erroneous interpretation of the legal effect of the terms of the three-party and two-party contracts between Penn Water, Safe Harbor, and Baltimore Company, and not upon the undisputed facts as to the services rendered by Safe Harbor. A copy of the Commission's Opinion No. 173 and accompanying Order issued January 5, 1949, is attached hereto and made a part hereof as Exhibit D.

XV. On January 28, 1949, Penn Water and Transmission Company filed with the Commission their Application for Rehearing of the Commission's Order of January 5, 1949. Such Application for Rehearing included a request for further hearing to give Petitioners an opportunity to prove a number of facts stated therein, (a) in rebuttal of many statements in the Commission's Opinion No. 173 and findings in its Order; (b) showing changes in facts deemed material by the Commission in its Opinion occurring since the close of the record or since the issuance of the Opinion and Order; and (c) new facts occurring after the close of the record or after the issuance of such order. A copy of such Application for Rehearing of Order issued January 5, 1949, is attached hereto and made a part hereof as Exhibit E.

XVI. By its order issued January 31, 1949, the Commission stayed the effective date of its order of January 5, 1949, pending expiration of the period in which Petitioners' Application for Rehearing may be acted upon and petition for judicial review may be filed. The stay was granted on condition that the difference between payments received by Petitioners under existing arrangements and those which would be required under the Commission's order be segregated in a reserve for the purpose of possible repayment if and to the extent the Commission's order shall finally become effective. A copy of such order of

January 31, 1949, is attached hereto and made a part hereof as Exhibit F.

XVII. By its order issued February 28, 1949, and accompanying Opinion No. 173-A, the Commission denied Petitioner's Application for Rehearing of Order issued January 5, 1949; but in addition amended its Orders of January 5, 1949, and January 31, 1949, making without hearing additional unsupported statements, conclusions, findings, and requirements. The Order of February 28, 1949, was made effective retroactively to February 26, 1949. Under the terms of the Commission's Order of January 31, 1949, the stay of the Commission's Order of January 5, 1949, is effective only until the end of the period in which a petition for judicial review may be filed. Such period is prescribed by Section 313 (b) of the Federal Power Act as "within sixty days after the order of the Commission upon application for rehearing." The effectiveness of the Commission's stay is about to expire and the same considerations which required the granting of the Commission's stay support interim judicial relief in the form of a stay of the Commission's orders, pending final determination of the validity of such orders on this review. A copy of the Commission's Opinion No. 173-A and accompanying order issued February 28, 1949, is attached hereto and made a part hereof as Exhibit G.

XVIII. On March 11, 1949, Penn Water and Transmission Company filed with the Commission their Application for Rehearing of the Commission's order of February 28, 1949. Such Application for Rehearing again included a request for further opportunity for hearing to prove additional facts in rebuttal to statements in the Commission's Opinion No. 173-A and its order of February 28, 1949, and showing additional changes in facts and new facts. It also included a complaint, pursuant to Section 306 of the Federal Power Act (16 U. S. C. § 825e; 49 Stat. 856), against the excessive, unreasonable, and unlawful

rates or charges of Baltimore Company for its purported services to Penn Water, to the extent that the Commission fixed such rates or charges by allowing credits to Baltimore Company therefor in regulating the revenues of Penn Water for its services to Baltimore Company. A copy of such Application for Rehearing of Order issued February 28, 1949, is attached hereto and made a part hereof as Exhibit H.

XIX. By its order issued March 17, 1949, the Commission denied Petitioners' Application for Rehearing of Order issued February 28, 1949. No action was taken by the Commission on Petitioners' complaint as required by Section 306 of the Act. A copy of such order issued March 17, 1949, is attached hereto and made a part hereof as Exhibit I.

XX. Petitioners are here before your Honorable Court for review of the orders, actions, and rulings of the Commission in its Docket No. IT-5915, and for interim judicial relief, pending such review, to prevent the irreparable injury to Petitioners which would result from the effectiveness of the Commission's orders during the pendency of such review in the event such orders are finally held to be unlawful and set aside or modified, and to preserve the *status* during such review. No injury will result to the Commission or to any customer of Petitioners from such interim relief.

The Facts and Statutes Upon Which Jurisdiction Is Based.

I. The final orders of the Commission of which review is sought were issued January 5, 1949, February 28, 1949, and March 17, 1949, purportedly under the provisions of the Federal Power Act (16 U. S. C. § 791a *et seq.*; 41 Stat. 1063; 46 Stat. 797; 49 Stat. 838, 847). Petitioners have applied to the Commission for a rehearing of each of the orders of January 5, 1949, and February 28, 1949, within

the thirty days prescribed by Section 313 (a) of the Act (16 U. S. C. § 825-l (a); 49 Stat. 860), as shown by Exhibits E and H hereto. By its order of February 28, 1949, the Commission denied rehearing of its order of January 5, 1949; and by its order of March 17, 1949, the Commission denied rehearing of its order of February 28, 1949. This Petition for Review is filed within sixty days after both of the orders of the Commission upon the applications for rehearing; and a copy of this Petition for Review is being served forthwith upon a member of the Commission; as required by Section 313 (b) of the Act (16 U. S. C. § 825-l (b); 49 Stat. 860).

II. Section 313 (b) of the Federal Power Act provides for judicial review of orders of the Commission in this Court by written petition to review praying that the orders of the Commission be modified or set aside in whole or in part. Section 313 (b) also provides that if any party shall apply to the Court for leave to adduce additional evidence, and shall show to the satisfaction of the Court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the Court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms as to the Court may seem proper. Section 313 (c) of the Act (16 U. S. C. § 825-l (c); 49 Stat. 860) provides that the commencement of proceedings for judicial review under Section 313 (b) of the Act shall not, unless specifically ordered by the Court, operate as a stay of the Commission's orders.

III. Section 10 (a) of the Administrative Procedure Act (~~16~~ U. S. C. § 1009 (a); 60 Stat. 243) entitles Petitioners to judicial review of the Commission's orders as persons suffering legal wrong because of such actions and as persons adversely affected and aggrieved by such actions. Section 10 (b) of such Act (~~16~~ U. S. C. § 1009 (b))

specifies the form of proceeding for such review to be that provided by the Federal Power Act, and, in the event of inadequacy thereof, any applicable form of legal action. Section 10 (c) of such Act (16 U. S. C. § 1009 (c)) makes reviewable each of the orders sought to be reviewed herein, and all preliminary, procedural, and intermediate orders, actions, and rulings of the Commission in its Docket No. IT-5915. Section 10 (d) of such Act (16 U. S. C. § 1009 (d)) authorizes the Court to issue all necessary and appropriate process to postpone the effective date of the Commission's orders to the extent necessary to prevent irreparable injury or to preserve status or rights pending conclusion of the review proceedings. Section 10 (e) of such Act (16 U. S. C. § 1009 (e)) provides for the scope of judicial review and the authority of the Court in connection therewith.

The Relief Prayed.

Petitioners pray that:

I. The said Commission orders of January 5, 1949, February 28, 1949, and March 17, 1949, be reviewed by this Court; and that said orders be held unlawful and set aside, or modified as may be necessary to the extent such orders are held unlawful; or that such other orders may be made herein as to this Court may seem just;

II. The said Commission orders of September 1, 1944, October 3, 1944, and April 5, 1946, and the conditions contained in the Commission's Order of January 31, 1949, be reviewed by this Court; that said preliminary, procedural, and intermediate orders and conditions be held unlawful; and that all other preliminary, procedural, and intermediate actions and rulings of the Commission in its Docket No. IT-5915 be reviewed and held unlawful by the Court to the extent necessary to render complete judicial relief from the actions of the Commission;

III. Pending such review by this Court and conclusion of such review proceedings, the effectiveness of the said Commission order of January 5, 1949, be stayed upon such conditions, if any, as to this Court may seem just; and

IV. Petitioners hereby apply to this Court for leave to adduce additional evidence as specified in the offers of proof contained in paragraphs I (6) (h), II (3), II (3) (c), II (7) (c), II (26) (c), II (28) (c), II (41) (b), II (47) (b), II (47) (c), II (50), II (51), II (54) (c), II (56) (c), and II (65), Section 92 of Petitioners' Application for Rehearing of order issued January 5, 1949, attached hereto as Exhibit E; as specified in the offers of proof contained in paragraphs II (6) (b), II (9) (b), II (10) (e), II (10) (h), II (10) (i), II (11) (b), and V of Petitioners' Application for Rehearing of order issued February 28, 1949, attached hereto as Exhibit H; and to prove that the fair value of Petitioners' property used and useful in rendering services to the customers of Penn Water is not less than $41,000,000; that the estimated cost of constructing, as of December 31, 1945, a substitute new plant capable of providing the same service as provided by such property is not less than $55,300,000; that the cost of constructing and reproducing such property, as of December 31, 1945, is not less than $62,400,000; and that the nominal dollar investment in such property, adjusted for changes in purchasing power of the dollar to 1945, is not less than $50,000,000; and as a showing to the Court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission Petitioners state:

(A) That on their face all of the facts sought to be proved by the offers of proof contained in said Applications for Rehearing are material as facts in rebuttal to statements of the Commission in its Opinions or Orders issued in its Docket No. IT-5915; that to the extent any of the facts alleged in such offers of proof were known to Petitioners prior to the close of the record before the Commission on

July 16, 1947, or occurred after such date and were known to Petitioners prior to the issuance of the Commission's Opinion No. 173 and its order of January 5, 1949, or occurred after the date of such order and were known to Petitioners prior to the issuance of the Commission's Opinion No. 173-A and its order of February 28, 1949, Petitioners had no notice that such facts would be necessary to rebut the arbitrary, capricious, and unlawful and unsupported statements of the Commission in such opinions and orders in reference to which each of such offers of proof were made; that the Commission had notice in fact of the orders of the Pennsylvania Commission, dated September 27, 1948, on or about October 1, 1948; that the facts occurring after either of the Commission's orders of January 5, 1949, and February 28, 1949, could not have been adduced as evidence in the proceedings before the Commission except by way of offers of proof as so made; and that the Commission, by its orders of February 28, 1949, and March 17, 1949, refused to give Petitioners any opportunity to adduce such evidence; and

(B) That the facts as to fair value, cost of construction of a substitute new plant, cost of construction and reproduction, and adjusted dollar investment were the subject of offers of proof in the proceedings before the Commission as evidence material and relevant to a determination of the valuation of Petitioners' property for purposes of rate making under either Section 20 or Sections 206 (a) and 208 (a) of the Federal Power Act (16 U. S. C. §§ 813, 824e (a), 824a (a); 41 Stat. 1073, 49 Stat. 852, 853) and to a determination of the fair rate of return and the fair return allowance; and that the Commission refused to allow such evidence to be adduced before it.

V. This Court grant such further relief as may seem just and proper in the premises.

The Points on Which Petitioners Intend to Rely.

I. The Federal Power Commission had no jurisdiction, authority, or power to issue and enforce its said Orders of September 1, 1944, October 3, 1944, April 5, 1946, January 5, 1949, February 28, 1949, and March 17, 1949, or the conditions of its said Order of January 31, 1949, in its Docket No. IT-5915 for the following reasons:

(A) There was no substantial evidence of record before the Commission to support any exercise of jurisdiction by the Commission under either Sections 19 or 20 of Part I of the Federal Power Act (16 U. S. C. §§ 812, 813; 41 Stat. 1073, 49 Stat. 847); and exclusive jurisdiction to regulate any of Petitioners' rates or charges is vested in the Pennsylvania and Maryland Commissions by such Sections;

(B) None of the provisions of Part II of the Federal Power Act (16 U. S. C. §§ 824-824h; 49 Stat. 847) authorize or support the issuance of the said Commission orders, for the reason that Penn Water must be treated as a licensee within the meaning of Part I of the Act, and such a licensee is not subject to the rate regulatory provisions of Part II of the Act;

(C) The Commission does not have jurisdiction, authority, or power under either Sections 20, 201, or 206 (a) of the Federal Power Act (16 U. S. C. §§ 813, 824, 824e; 41 Stat. 1073; 49 Stat. 847, 852) to regulate, control, determine, or fix so much of Petitioners' services or rates, charges, or classifications for services not constituting interstate or foreign commerce, or the rules, regulations, practices, or contracts affecting such rates, charges, or classifications;

(D) Neither the provisions of Section 206 (a) of the Federal Power Act, nor any other provisions of the Act, authorize or support the issuance of the said Commission Orders for the reasons that:

(1) Neither Penn Water nor Transmission Company have any rates, charges, or classifications subject to the jurisdiction of the Commission, within the meaning of Section 206 (a) of the Act or of Section 205 of the Act (16 U. S. C. 1946 ed. § 824d; 49 Stat. 851), in that:

(a) The rendering of services by Penn Water to Metropolitan Company, and jointly with Safe Harbor to PP & L, and Philadelphia Company, and the rates, charges, and classifications therefor, constitute transactions in intrastate commerce and do not constitute transactions, transmissions, or sales in interstate commerce, within the meaning of Sections 201 (b) and (c) of the Act; and there is no substantial evidence of record to the contrary.

(b) The rendering of services by Penn Water, jointly with Safe Harbor, Baltimore Company, and PEPCO to the Railroad, and the rates, charges, and classifications therefor, do not constitute sales of electric energy at wholesale, within the meaning of Sections 206 (a) and 201 (d) of the Act; and there is no substantial evidence of record to the contrary.

(c) Penn Water has no rates, charges, or classifications for the transmission or sale of electric energy to Baltimore Company, within the meaning of Sections 206 (a) and 201 (b) of the Act.

(d) Certain of the rates, charges, or classifications of Penn Water, or Penn Water and Safe Harbor jointly, for services rendered to Metropolitan Company, PP & L, and Philadelphia Company are not rates, charges, or classifications for the transmission or sale of electric energy, within the meaning of Sections 206 (a) and 201 (b) of the Act.

(2) The services rendered by Penn Water to PP & L, Philadelphia Company, Railroad Company, and Baltimore Company are rendered jointly with others not

made Respondents to these proceedings, and the rates, charges, and classifications therefor are joint; there is no substantial evidence of record to the contrary; and the said Commission Orders were issued without notice or opportunity for hearing to Safe Harbor jointly obligated to and jointly serving the foregoing customers, contrary to the provisions of Section 206 (a) of the Act and the due process clause of the Fifth Amendment to the Constitution of the United States.

(3) The said Commission Order of January 5, 1949, requires Penn Water alone to file new schedules of rates and charges for services to PP & L and Philadelphia Company without requiring Safe Harbor to join or concur in the filing of such schedules, without authority under the Federal Power Act; thereby requiring Penn Water to assume the entire obligations to such customers instead of the joint obligation which exists to the impairment of its ability to render adequate service to its customers within the meaning of Section 207 of the Act (16 U. S. C. 1946 ed. § 824f; 49 Stat. 853); and there is no substantial evidence of record to the contrary.

(4) Insofar as the said Commission Order of January 5, 1949, undertakes to require a reduction in the revenues of Penn Water alone it constitutes regulation by the Commission of the divisions of revenue received by Penn Water for its participation in the rendering of joint services to each of its customers except Metropolitan Company, without jurisdiction, authority, or power in the Commission to regulate divisions of rates or charges for joint service under the Federal Power Act.

(5) There is no substantial evidence of record nor adequate subsidiary findings to support any finding by the Commission that any of the rates, charges, or classifications, demanded, observed, charged, or collected by Penn Water, or that any rule, regulation, practice, or contract affecting any such rate, charge or classification is unjust,

unreasonable, unduly discriminatory or preferential, as required by Section 206 (a) of the Act or by Section 20 of the Act.

(6) The said Commission Orders of January 5, 1949, and February 28, 1949, were issued without a fair hearing, and the said Commission Orders of September 1, 1944, October 3, 1944, and April 5, 1946, operated to deprive Petitioners of an opportunity for such a hearing, in violation of Section 206 (a) of the Act, Section 20 of the Act insofar as such Section 20 makes applicable the provisions of Section 15 (1) of the Interstate Commerce Act (49 U. S. C. § 15 (1); 24 Stat. 384, 34 Stat. 589, 36 Stat. 484, 48 Stat. 1102, 54 Stat. 911), and contrary to the provisions of the due process clause of the Fifth Amendment to the Constitution of the United States.

(E) If the Federal Power Act can properly be construed otherwise than as described in paragraphs (A), (B), (C), and (D) above, the same is unconstitutional because in violation of the Tenth Amendment to the Constitution of the United States.

(F) The said Commission Order of January 5, 1949, requires Petitioners to make changes from time to time in the future in rates and charges for services to Baltimore Company without notice, opportunity for hearing, or findings as of such future times that the then existing rates and charges are unjust, unreasonable, unduly discriminatory, or preferential as of such future times, upon the basis of the facts as of such future times; without authority under the Federal Power Act and contrary to the provisions of Section 206 (a) of the Act; and contrary to Article I, Section 1, of the Constitution of the United States.

(G) The said Commission Order of January 5, 1949, and the conditions contained in its Order of January 31, 1949, purport to make effective the requirements of said Order of January 5, 1949, within a period of less than thirty days from the date of issuance of such order, contrary to

Petitioners' rights and the limitations on the Commission's power under the provisions of Section 15 (2) of the Interstate Commerce Act (49 U. S. C. § 15 (2); 34 Stat. 589; 36 Stat. 551; 41 Stat. 484), as made applicable by Section 20 of the Federal Power Act.

(H) To the extent that the conditions contained in the said Commission Order of January 31, 1949, purport to permit the Commission subsequently to enter an order *nunc pro tunc,* or otherwise, requiring any reduction in Petitioners' revenues, rates, or charges, under its Order of January 5, 1949, retrospectively from any date prior to the date of the subsequent order, and requiring reparation or repayment of any money amounts in excess of twenty dollars to any persons, such order is in excess of any statutory authority of the Commission under the Federal Power Act, deprives Petitioners and Safe Harbor of their property without due process of law in violation of the Fifth Amendment to the Constitution of the United States, and is contrary to and in violation of Article III, Section 1 of, and the Seventh Amendment to, the Constitution of the United States.

(I) To the extent that the said Commission Order of February 28, 1949, extended or modified its Orders of January 5, 1949, and January 31, 1949, adversely against Petitioners without hearing it is unlawful and in excess of the authority contained in Section 313 (a) of the Federal Power Act, and in violation of Section 206 (a) of the Act, and deprives Petitioners of their property without due process of law in violation of the Fifth Amendment to the Constitution of the United States.

II. The said Commission Orders, accompanying Opinions, and the statements, findings and conclusions contained therein, and the rates and charges which purport to be thereby determined, fixed, prescribed, and required to be filed, charged, and observed are unlawful and unconstitutional in that they are unreasonable, arbitrary, capricious,

discriminatory, in excess of the Commission's statutory jurisdiction, authority, and limitations under the Federal Power Act and contrary to the provisions of such Act, without observance of the procedure required by law, unsupported by substantial evidence, contrary to the substantial evidence, and result from failure of the Commission to make proper findings and determine proper facts and conclusions of law; and if enforced would deprive petitioners and Safe Harbor of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States; all as set forth in Petitioners' Applications for Rehearing attached hereto as Exhibits E and H and without in any manner limiting or waiving the points or reasons set forth in said Applications for Rehearing the said orders, opinions, statements, findings, conclusions, rates and charges are unlawful and unconstitutional as aforesaid in the following particular respects:

(A) *Erroneous Allocation of Costs and Revenues.*

(1) The Commission's conclusions as to excessive revenues from Petitioners' services to Baltimore Company are based upon an allocation of costs and revenues which is in error in the following respects:

(a) Substantially all of the purported excess revenues from Baltimore Company result from a determination and allowance by the Commission of an increase in Baltimore Company rates, charges, or revenues in the form of a credit for its purported services to Penn Water, without notice that the reasonableness or lawfulness of such Baltimore Company rates, charges, or revenues were at issue in the proceeding before the Commission, without substantial evidence to support any such increase over the existing rates or charges, without adequate findings to support such an increase, and without observance of the procedure required by the Federal Power Act; and the Commission failed to act upon a complaint by Penn Water, under Sec-

tion 306 of the Federal Power Act (16 U. S. C. §§ 825e; 49 Stat. 856), against the excessiveness, unreasonableness, and unlawfulness of such Baltimore Company rates, charges, and revenues.

(b) Such credit of revenues to Baltimore Company was based in substantial part upon an assumed "diversion" by Penn Water of Safe Harbor energy and capacity for service to Pennsylvania customers to which Baltimore Company was assumed to be "entitled" under an erroneous construction of the respective obligations, rights, and "entitlements" of Safe Harbor, Penn Water, and Baltimore Company created by the three-party contract between them and by the contracts of Penn Water and Safe Harbor with their Pennsylvania customers.

(c) Such credit of revenues to Baltimore Company for an assumed "diversion" of Safe Harbor services was not determined upon the basis of the Safe Harbor costs of such services, but was determined upon the basis of assumed higher Baltimore Company costs, having no support by substantial evidence of record.

(d) Such purported excess revenues from Baltimore Company are based in part upon an arbitrary inclusion, in revenues from Baltimore Company, of net revenues actually received from other customers for interchange transactions conducted with them by Penn Water or by Penn Water and Safe Harbor jointly.

(e) Such purported excess revenues from Baltimore Company are based in part upon an arbitrary reduction in the division of revenues received by Penn Water from Baltimore Company for service to the Railroad and including such amount as revenues from Baltimore Company, without authority to adjust or regulate such division under the Federal Power Act, and without support by adequate findings or by the evidence of record; and the reduction in the revenues Penn Water is to receive from

Baltimore Company was based in part upon the arbitrary elimination of income taxes as an expense on that portion of the Penn Water division of Railroad revenues determined by the Commission to be "excess".

(f) Such purported excess revenues from Baltimore Company are based in part upon an allocation of costs to Baltimore Company which does not reflect the actual substantially greater use of Petitioners' plant in rendering services to Baltimore Company.

(2) The Commission's conclusions as to excessive revenues from Petitioners' services to each of its customers are based upon an allocation of costs and revenues which is in error in the following respects:

(a) The purported excess revenues from services to each of Petitioners' customers are based in part upon the arbitrary elimination of substantial actual expenses incurred by Petitioners in rendering such services, without adequate findings or evidence to support such eliminations.

(b) Not all of the normal costs of power received by Penn Water from Safe Harbor for use in serving their Pennsylvania customers were included in the total costs allocated by the Commission; and in the event the Commission's Order in its Docket No. IT-5914, reducing the revenues paid by Penn Water to Safe Harbor is set aside in pending litigation, and in the event the orders of the Pennsylvania Commission of September 27, 1948, are sustained in pending litigation, Penn Water will be liable to pay to Safe Harbor substantial amounts in excess of the amounts included in Penn Water's expenses by the Commission.

(B) *Rate of Return and Return.*

The rate of return and return allowed by the Commission is not commensurate with returns on investments in other enterprises having corresponding risks and is insuffi-

cient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and attract capital; and if the Commission's Order of January 5, 1949, were enforced in this respect it would deprive Petitioners of their property without due process of law, in violation of the Fifth Amendment to the Constitution of the United States.

(C) *Rate Base.*

(1) The Federal Power Commission, by its orders fixing the rates, charges, and revenues to which Petitioners are entitled used a rate base arrived at by deducting from purported actual legitimate investment in Petitioners' project, the adjusted book reserve for depreciation, and adding thereto an insufficient allowance for working capital. Such a rate base is unsupported by substantial evidence and contrary to the substantial evidence and the provisions of the Federal Power Act; and the Commission erred in deducting from purported actual legitimate investment the adjusted book reserve for depreciation on a finding that such depreciation reserve was accumulated from earnings in excess of a fair return, which finding is not supported by substantial evidence and contrary to the substantial evidence. Petitioners contend that the determination of rates on an investment basis requires the use of an undepreciated rate base with an appropriate credit to the rate payer measured by the earnings available on risk-free investment thereof, otherwise the rates determined thereon fail to afford a return of all of the costs of service.

(2) The Federal Power Commission by its orders fixing the rates, charges, and revenues to which Petitioners are entitled erroneously determined that the actual legitimate investment in Petitioners' electric plant used and useful was $33,113,148.00 as of December 31, 1946, that for the purpose of fixing a proper rate base it is fair and reasonable to use the 1946 year's average actual legitimate

investment in Petitioners' electric plant used and useful of $33,126,585, that Petitioners' net investment rate base for the year 1946 was $24,774,712.00 and that it is fair and reasonable to use $33,113,148.00 plus the recorded cost of additions less recorded retirements, as the actual legitimate investment in Petitioners' electric plant used and useful for the future. Said determinations are unreasonable, arbitrary, capricious, unlawful, unsupported by substantial evidence, contrary to the provisions of the Federal Power Act, and deprive Petitioners of their property without due process of law in violation of the Fifth Amendment to the Constitution of the United States, for the reasons specified in paragraph (1) above and in that they exclude from Petitioners' actual legitimate investment and their rate base, a total of $3,465,677.73 being composed of the following items of original cost:

Value of McCall Ferry Power Company stock issued for Land and Water Power Rights:		
McCall Company stock issued to Hutchinson as part consideration for land and water power rights—18,840 shares common at $25 per share	$471,000.00	
McCall Company stock issued for organization expenses of company—10 shares common at $25 per share	250.00	
McCall Company stock issued to Harlow-McGaw as part consideration for land and water power rights—1,000 shares common at $25 per share	25,000.00	

McCall Company stock issued to C. D. Pullen as part consideration for options on Harlow McGaw properties —150 shares common at $25 per share	3,750.00	$500,000.00
Fisk Management Fee:		
McCall Company stock issued to Harvey Fisk & Sons for management services		199,570.31
Aldred Management Fee:		
Pennsylvania Company stock issued to J. E. Aldred for management services for period Nov. 1, 1908 to Oct. 31, 1912—5,000 shares at $60 per share—$300,000—Portion applicable to construction period Nov. 1, 1908 to Sept. 30, 1911 on a prorated basis		218,750.00
Stock Issuance Expense:		
McCall Company bond issuance expense applicable to Pennsylvania Company stock exchanged for McCall Company bonds	331,703.15	
Expenses incurred in connection with the issuance of Capital stock of Pennsylvania Company from 1923 to 1935	81,906.59	413,609.74
Interest During Construction (including operating income for the period July 1 to Sept. 30, 1911)		1,008,579.57

Disallowed Costs Relating to "Cessation Period"		143,981.46
Promotion Expense		29,601.59
Difference between Respondents [Petitioners] and Staff as to Value in 1908 of $703,000 Susquehanna Power Company Bonds and 1,500 shares of Susquehanna Properties Company Stock issued in Exchange for McCall Company Properties and Water Power Rights Located Below McCall Development		37,063.98
Profit on Certain Property Sold to Safe Harbor Water Power Corp.		119,940.20
Flashboard Development Costs		49,754.97
Land and Water Rights Acquired Since Dec. 31, 1909:		
Acquisition expenses and necessary legal and engineering services	171,134.28	
Establishment of gauges for determination of river flow.	12,420.77	
Costs of property acquired from the Baltimore Electro Alloys Co., a former affiliate	24,151.83	
Acquisition costs of property described as Boyd Mill tract charged in error to operating expenses when incurred.	1,427.42	209,134.30
Conowingo Backwater Litigation		39,301.46
Donations in Aid of Construction.		18,127.71
Loss of Materials and Supplies and Cash Unaccounted for		13,164.03

Susquehanna Contracting Co. Administrative Expenses	6,621.85
Construction Fee Charged to Holtwood Power Co.	50,194.73
Holtwood Power Co. Organization Expense	17,875.34
Riverside Line—Four Unused Tower Foundations	3,595.96
Physical Items of Property Which Were Originally Charged in Error to Operating Expenses or Depreciation Reserve	96,116.84
Holtwood Church	1,400.00
River Coal Investigation Expense.	6,132.41
Construction Work in Progress	205,243.01
Property Held for Future Use	77,918.28
Total Items Described Above.	$3,465,677.73

(D) *Depreciation.*

The orders, findings, and conclusions of the Federal Power Commission insofar as they relate to depreciation are unsupported by substantial evidence, contrary to the substantial evidence, arbitrary, capricious, unreasonable, contrary to law and the Federal Power Act, and deprive Petitioners of their property without due process of law contrary to the Fifth Amendment to the Constitution of the United States because:

(1) The Federal Power Commission's purported determination of depreciation is not the actual depreciation in Petitioners' property but simply represents an unsupported guess as to the consumed "service life" of Petitioners' property, determined by fixing so-called "service lives" of Petitioners' property which bear no relationship thereto; and

(2) The Federal Power Commission has considered as depreciable property certain elements of Petitioners' property which are in fact and in law non-depreciable.

(E) *Failure to Make Specific Findings of Fact.*

The said Commission orders of January 5, 1949, and February 28, 1949, failed to make certain specific findings of fact as requested by Petitioners in their Applications for Rehearing, attached hereto as Exhibits E and H.

(F) *Denial of Applications for Rehearing.*

The said Orders of February 28, 1949, and March 17, 1949, are unlawful and unconstitutional in that they are unreasonable, arbitrary, capricious, and deprive Petitioners of their property without due process of law in violation of the Fifth Amendment to the Constitution of the United States for each and all of the reasons specified in Petitioners' Application for Rehearing of Order issued February 28, 1949, attached hereto as Exhibit H; and by reason of the new facts stated in such Application and in Petitioners' Application for Rehearing of Order issued January 5, 1949, attached hereto as Exhibit E.

(G) *Other Objections and Exceptions.*

Petitioners do not waive but expressly reaffirm and renew each and all of the objections and exceptions to the jurisdiction of the Commission and to the admission or exclusion of evidence, as shown by the transcript of the record before the Commission.

Respectfully submitted,

My Commission expires Oct. 14, 1953.

EXHIBIT A TO PETITION FOR REVIEW.

UNITED STATES OF AMERICA

FEDERAL POWER COMMISSION

Commissioners } Basil Manly, Acting Chairman, Claude L. Draper and John W. Scott. Nelson Lee Smith not participating.

September 1, 1944

In the Matter of Pennsylvania Water & Power Company } Docket No. IT-5915

ORDER INSTITUTING INVESTIGATION

Upon consideration of the petition filed on August 31, 1944, by the Maryland Public Service Commission requesting this Commission to institute an investigation of the interstate wholesale rates of Safe Harbor Water Power Corporation and Pennsylvania Water & Power Company, and the joint petition filed on August 14, 1944, by counsel for the Mayor and City Council of Baltimore, Maryland, counsel for the County Commissioners of Baltimore County, Maryland, counsel for Bethlehem-Fairfield Shipyard, Inc., and counsel for Rustless Iron & Steel Corporation, also requesting this Commission to institute such investigation; and

It appearing to the Commission that:

(a) Pennsylvania Water & Power Company owns and operates facilities, among others, used for the transmission and sale at wholesale

(i) of electric energy generated in Pennsylvania and transmitted therefrom to Maryland and the District of Columbia, and

(ii) of electric energy generated in Maryland and the District of Columbia and transmitted therefrom to Pennsylvania,

all such electric energy being consumed at points outside the respective States in which it is generated. Such facilities are facilities for the transmission and sale at wholesale of electric energy in interstate commerce. Pennsylvania Water & Power Company is a public utility within the meaning of that term as used in the Federal Power Act.

(b) Pennsylvania Water & Power Company owns and operates the Holtwood hydroelectric project on the Susquehanna River in Pennsylvania and by order of November 3, 1939, in Docket No. IT-5524, the Commission required the Company to apply for a license for said project under the Federal Power Act. On review the Commission's order was affirmed in *Pennsylvania Water & Power Company* v. *Federal Power Commission* (App. D. C.) 123 F. (2d) 155; *cert. denied*, 315 U. S. 806. By order of November 23, 1943, the Commission authorized the issuance of a license for the Holtwood Project No. 1881. On December 22, 1943, the Company filed an application for rehearing with respect to the amortization reserve provisions of the Commission's order of November 23, 1943, and such rehearing was granted by order of January 21, 1944, and the matter is now pending before the Commission.

(c) In addition to an agreement involving the transmission and sale of electric energy subject to the jurisdiction of the Commission to which Pennsylvania Water & Power Company is a party, and which is designated in the files of the Commission as Pennsylvania Water & Power Company

Rate Schedule FPC No. 1 and Supplement No. 1 thereto, Safe Harbor Water Power Corporation and Pennsylvania Water & Power Company are both parties to certain agreements involving the transmission and sale of electric energy subject to the jurisdiction of the Commission, which said agreements include those designated in the files of the Commission as follows: Safe Harbor Water Power Corporation Rate Schedule FPC No. 1 (also designated as Pennsylvania Water & Power Company Rate Schedule FPC No. 8), and Supplements Nos. 1 and 2 thereto; Safe Harbor Water Power Corporation Rate Schedule FPC No. 3 and Supplements Nos. 1 and 2 thereto, and Supplement No. 1 to Supplement No. 2 thereto; Safe Harbor Water Power Corporation Rate Schedule FPC No. 4 and Supplements Nos. 1 and 2 thereto; Safe Harbor Water Power Corporation Rate Schedule FPC No. 5.

(d) By order of September 1, 1944, the Commission has instituted an investigation of the interstate wholesale rates of Safe Harbor Water Power Corporation.

The Commission *finds* that:

It is necessary and proper in the public interest, and to aid in the enforcement of the provisions of the Federal Power Act, that an investigation be instituted by the Commission into and concerning all rates, charges, or classifications demanded, observed, charged, or collected by Pennsylvania Water & Power Company for or in connection with any transmission or sale of electric energy subject to the jurisdiction of the Commission, and any rules, regulations, practices, or contracts affecting such rates, charges, or classifications.

The Commission *orders* that:

An investigation be and the same hereby is instituted for the purpose of enabling the Commission:

(A) To determine whether, in connection with any transmission or sale of electric energy subject to the jurisdiction of this Commission under the Federal Power Act, by Pennsylvania Water & Power Company, any rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, are unjust, unreasonable, unduly discriminatory or preferential; and

(B) If, after hearing, it shall find that any of such rates, charges, classifications, rules, regulations, practices, or contracts are unjust, unreasonable, unduly discriminatory, or preferential, to determine and fix by appropriate order or orders, just and reasonable rates, charges, classifications, rules, regulations, practices, or contracts to be thereafter observed and in force.

By the Commission.

October 3, 1944

In the Matter of Pennsylvania Water & Power Company	Docket No. IT-5915

SUPPLEMENTAL ORDER ENLARGING INVESTIGATION

It appearing to the Commission that:

(a) By order of September 1, 1944, the Commission instituted an investigation of Pennsylvania Water & Power Company to determine whether, in connection with any transmission or sale of electric energy subject to the jurisdiction of the Commission, any rates, charges, or classifications demanded, observed, charged or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, are unjust, unreasonable, unduly discriminatory or preferential; and if, after hearing, found to be unjust, unreasonable, unduly discriminatory or preferential, to determine and fix by order or orders, just and reasonable rates, charges, classifications, rules, regulations, practices or contracts to be thereafter observed and in force.

(b) Susquehanna Transmission Company of Maryland is a wholly owned subsidiary of Pennsylvania

Water & Power Company and owns transmission lines and facilities which are operated as and constitute an integral part of the transmission system of Pennsylvania Water & Power Company, and are utilized in the transmission and sale at wholesale of electric energy in interstate commerce from the Safe Harbor hydroelectric generating plant of Safe Harbor Water Power Corporation and from the system of Pennsylvania Water & Power Company.

The Commission *finds* that:

It is necessary and proper, in the public interest, and to aid in the enforcement of the provisions of the Federal Power Act that the investigation instituted by the order of September 1, 1944, of Pennsylvania Water & Power Company be enlarged to include Susquehanna Transmission Company of Maryland.

The Commission *orders* that:

(A) The investigation instituted by the Commission's order of September 1, 1944, be and the same is hereby enlarged to include Susquehanna Transmission Company of Maryland for the purpose of enabling the Commission to determine whether, in connection with any transmission or sale of electric energy by Pennsylvania Water & Power Company or Susquehanna Transmission Company of Maryland subject to the jurisdiction of the Commission, any rates, charges, or classifications demanded, observed, charged or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, are unjust, unreasonable unduly discriminatory or preferential; and

(B) If, after hearing, it shall find that any of such rates, charges, classifications, rules, regulations, practices or contracts are unjust, unreasonable, unduly discriminatory, or preferential, to determine

and fix by appropriate order or orders, just and reasonable rates, charges, classifications, rules, regulations, practices, or contracts to be thereafter observed and in force.

[1]* OPINION

By THE COMMISSION:

This is a proceeding under the Federal Power Act (Act)[1] upon an order of the Commission instituting an investigation to determine just and reasonable rates and charges for the Respondents, Pennsylvania Water & Power Company (Penn Water) and Susquehanna Transmission Company of Maryland (Transmission Company), the latter being Penn Water's wholly-owned affiliate.[2] The matters at issue involve a determination of the scope of the jurisdiction of the Commission with respect to the rates and charges of Penn Water, a determination of the amount of the rate base (including the investment of both Penn Water and Transmission Company) and the fair rate of return with respect thereto, the amount, if any, of revenues received by Penn Water in excess of the reasonable cost of service rendered by Penn Water and Transmission Company and of resulting reductions in rates subject to the Commission's jurisdiction.

[2] BACKGROUND OF PROCEEDING

By an order issued September 1, 1944, and a supplemental order issued October 3, 1944, the Commission instituted an investigation of rates and charges charged or collected by Respondents with respect to any transmission or sale of electric energy subject to the Commission's jurisdiction under the Federal Power Act. This investigation was instituted to enable the Commission to determine whether any of the foregoing rates and charges were unjust, unrea-

* Figures in brackets represent page numbers of Opinion in typewritten form.

1. 49 Stat. 838; 16 U. S. C. 791a, et seq.

2. By agreement, Penn Water pays all of the expenses of Transmission Company and in addition, has waived interest on the outstanding first-mortgage bonds of Transmission Company, all of which Penn Water owns. In exchange, Transmission Company transmits electric power and energy delivered to it by Penn Water at the Pennsylvania-Maryland state line for redelivery in Maryland or delivered to it in Maryland for redelivery to Penn Water at the said state line. Transmission Company, therefore, has no separate rates or charges.

sonable, or unduly discriminatory. Previously, however, there had been received two petitions requesting that the Commission undertake such an investigation, the one a joint petition filed August 14, 1944, by the Mayor and City Council of Baltimore, Maryland, The County Commissioners of Baltimore County, Maryland, Bethlehem-Fairfield Shipyard, Inc., and Rustless Iron & Steel Corporation, and the other a petition filed August 31, 1944 by the Public Service Commission of Maryland (Maryland Commission).

The Public Utility Commission of the Commonwealth of Pennsylvania (Pennsylvania Commission), the Maryland Commission, and Consolidated Gas Electric Light and Power Company of Baltimore (Md.) (Baltimore Company) [3] petitioned to become interveners in this proceeding. The Commission permitted intervention in each instance, and each of the interveners took active part in the proceedings.

Extensive hearings were held commencing April 15, 1946 and concluding July 16, 1947. The evidence received and the briefs have been carefully considered.

[3] PROPERTIES AND OPERATIONS

The Respondent, Penn Water, owns and operates the hydroelectric plant at Holtwood (Pa.), the Holtwood steam plant, and that part of an interconnected interstate transmission system consisting of various substations, transmission lines and associated equipment which are located in Pennsylvania. The respondent, Transmission Company, owns and operates that part of the same transmission system consisting of various substations, transmission lines and associated equipment which are located in Maryland. The facilities involved include the main dam, power house, turbines, 25- and 60-cycle electric generators, and frequency changers, all located at Holtwood (Pa.); the steam electric

3. Baltimore Company purchases electric power and energy from Penn Water and is further engaged in the generation, purchase, distribution and sale of electric power and energy in the City of Baltimore and elsewhere in the State of Maryland.

generating plant, coal recovery and preparation plant and accessory equipment,[4] transformer stations,[5] transmission lines, switching stations and facilities; and an operators' village. The hydroelectric and steam generating plants, with appurtenant facilities and equipment, are located together on the Susquehanna River, some 9 miles north of the Pennsylvania-Maryland state line, near what was formerly known as McCall's Ferry, in the Counties of Lancaster and York, Pennsylvania.

Ten hydro turbines in Penn Water's hydroelectric plant have a nominal total capacity of 150,000 hp. Eight 25-cycle generators have a total rated capacity of 87,000 kw, and two 60-cycle generators 24,000 kw, for a plant nominal rated capacity of 111,000 kw or a total [4] reported effective capacity of 104,000 kw. Two 60-cycle generators in Penn Water's steam electric generating plant have a nominal rating of 10,000 kw each, or a 3-hour peak rating of 28,000 kw.[6]

To provide for increased flexibility in system operations there were installed in the Holtwood hydro plant (1923) two 5,000 kw frequency changers for the conversion of 25-cycle energy, generated at the plant or received at the plant from other sources, to 60-cycle energy, and likewise for the conversion of 60-cycle energy to 25-cycle energy, as system demands require.

Respondents' interconnected interstate transmission system is a regional network comprising 566 circuit miles of high-voltage lines which include 60-cycle three-phase and 25-cycle single and three-phase circuits installed as tower lines of from one to four circuits each. These circuits operate at 220 kv and 66 kv, as to the 60-cycle (three-phase) circuit, and 132 kv (single-phase) and 66-kv (three-phase) as to the 25-cycle circuits.

---

4. Also located at Holtwood (Pa.), the coal-recovery equipment being used to dredge, dry and mill low-cost river-bottom anthracite coal recovered from the Holtwood dam pond, for use in the steam electric generating plant.

5. Conestoga and Holtwood, in Pennsylvania; Highlandtown in Maryland.

6. The 3-hour peak rating is effective from September 15 to May 15; the base load rating of the steam plant is 26,000 kw at all times.

The hydroelectric development at Safe Harbor (Pa.) is owned and operated by Penn Water's affiliate, Safe Harbor Water Power Corporation (Safe Harbor). From interconnections with Safe Harbor's transmission facilities, the entire output of Safe Harbor is transmitted to Pennsylvania customers over the facilities of Penn Water and to Maryland customers over the facilities of both Respondents. These facilities are interconnected with the facilities of Penn Water's Pennsylvania customers, including the Thorndale-Columbia section of [5] The Pennsylvania Railroad (Railroad), and with the facilities of Baltimore Company and Potomac Electric Power Company (PEPCO),[7] and the Perryville (Md.)-Benning (D. C.) section of the Railroad.

Operations of Penn Water, Safe Harbor and Baltimore Company are closely integrated and coordinated as a matter of economy, efficiency, flexibility, and maximum utilization of hydro capabilities, contracts being carefully worked out for that purpose as to firm energy requirements, while operations involving firm, interchange and emergency energy are conducted at all times by a dispatching system controlled by a dispatcher's office in coordination with various operating committees. In addition to the foregoing coordination and integration of operations, the constituent companies of this interconnected system plan and coordinate far in advance steam maintenance schedules which are based largely upon the predicted flows of the Susquehanna River and the determination of the availability of hydro energy during periodic steam maintenance outages.

That hydroelectric operations involve something more than the mere addition of cheaper energy to the system is revealed by the fact that such energy can be used for peaking purposes at such times that its location on comparatively sharp peak portions of the load curve permits substantial economy in system plant investment. Further, the

7. PEPCO is engaged in the generation, distribution, sale and delivery of electric power and energy in the District of Columbia and in adjoining territory in the State of Maryland.

quick-starting characteristics of Penn Water's hydroelectric generating equipment and the specially designed steam generating equipment of the Holtwood steam plant, as well as the interconnections with [6] the electrical systems of Penn Water's Pennsylvania customers, enable significant load swings, particularly characteristic of Baltimore Company's system's industrial load, to be carried with a minimum of difficulty and of investment expense.

Corporate Relationships

The Respondent, Penn Water, was organized January 13, 1910 under the laws of the Commonwealth of Pennsylvania as successor to McCall Ferry Power Company (McCall Company). The latter company had failed in 1908 while engaged in construction of the present Holtwood dam and power house, and the installation of certain appurtenant hydroelectric generating equipment and facilities. The organization of Penn Water followed a receivership which was accompanied by a foreclosure and sale of the properties of McCall Company and came about as the result of negotiations for the necessary additional financing which had been conducted by a committee representing the bondholders of McCall Company.

The Respondent, Transmission Company, was organized April 19, 1910, under the laws of the State of Maryland as a consolidation of two county pole-line companies. The then outstanding stock of the two predecessor companies was owned by McCall Company (Penn Water's predecessor) and the outstanding 12,055 shares of stock of Transmission Company are entirely owned by Penn Water.

Safe Harbor, also an affiliate of Penn Water, was organized under the laws of the Commonwealth of Pennsylvania, January 6, 1930. Safe Harbor has outstanding a total of 300,000 shares of non-par common stock divided into two classes: Class A, 100,000 shares of non-voting [7] stock, owned entirely by Baltimore Company, and Class B, 200,000 shares of voting stock, owned 50% by Penn Water and 50% by Baltimore Company.

CONTRACTS.

Under a contract with Baltimore Company, dated December 31, 1927, as supplemented on several occasions thereafter, Penn Water is obligated to provide Baltimore Company at all times with all the capacity and energy available to the former (Penn Water) from its own hydro and steam generating plants, and from its Safe Harbor one-third entitlement, referred to below, insofar as such power and energy is not required in connection with contracts to which Penn Water is a party and which Baltimore Company has approved. In turn, Penn Water is entitled to obtain from Baltimore Company steam-generated energy in excess of the latter's own requirements up to the limit of its available generating capacity. This contract, according to its terms, is to continue in force until midnight, April 22, 1980.

Pursuant to the provisions of the supplemental agreement of June 1, 1931, as modified by an agreement of September 29, 1939, Baltimore Company undertakes to pay, on the basis of a formulated power bill, all of Penn Water's operating expenses plus a specified return.

The reference to Penn Water's entitlement from Safe Harbor relates to a fifty-year agreement of June 1, 1931 wherein Safe Harbor agreed with the Baltimore Company and Penn Water (and the latter *inter sese*) that in return for a combined annual payment (in monthly installments which would yield to Safe Harbor, after operating expenses (including taxes and depreciation), a specified rate of return, the latter companies should be entitled to all of the capacity and energy available from the former's [8] six-unit development in the ratio of two-thirds (to Baltimore Company) and one-third (to Penn Water).[8] The foregoing contracts with their amendments are sometimes referred to as system foundation contracts.

8. The payment constituting the obligation of Baltimore Company and Penn Water is prorated between those parties in the ratio of their capacity and energy entitlements (the contract proportion) and remains unaffected by

Following a subsequent long-term agreement between Baltimore Company and PEPCO, of June 16, 1932, Penn Water also contracted with Baltimore Company and Safe Harbor to deliver or have delivered to PEPCO at the latter's Takoma Park (Md.) Substation, such power and energy as might be delivered to Penn Water for the purpose, and stipulated that the Takoma Park Substation should become an additional delivery point under the agreement of June 1, 1931. This interconnection was designed to provide PEPCO with firm peak service, additional power and energy needed by the Railroad at Benning (D. C.), and hydro and steam economy flow interchange, as well as to provide Baltimore Company with steam economy flow and to enable Baltimore Company and PEPCO to coordinate their system planning and investments in generating and transmission facilities.[9]

[9] Electric power and energy sales to the Railroad are made under a contract dated September 2, 1931, by and between the Railroad, Baltimore Company, Penn Water, and Safe Harbor, PEPCO becoming a party under a supplement of August 15, 1934. The contract covers delivery of the Railroad's entire 25-cycle, single phase, electrification requirements on the latter's main-line from Perryville (Md.) to Washington (D. C.), on its Philadelphia division between Thorndale (Pa.) and Harrisburg (Pa.) and on its Columbia and Port Deposit line from Columbia (Pa.) to Perryville (Pa.), together with the furnishing of certain special equipment and facilities. This contractual supply is delivered at Conestoga Substation (Safe Harbor), Fish-

---

the amount of power actually received by either. Safe Harbor later agreed (1939) to install an additional 25-cycle generator and cable to Conestoga Substation, to provide for increased power and energy requirements of the Railroad, the entitlement of two-thirds to Baltimore Company and one-third to Penn Water being applied to the capacity and energy to be available from this unit. Safe Harbor is committed not to contract to supply power and energy from additions to its plant to any other party without the consent of Baltimore Company and Penn Water.

9. The agreement between Baltimore Company and PEPCO is for a term ending September 30, 1960. By supplement of August 15, 1934, the tie-in capacity between the two companies was increased (for greater emergency assistance and increased volume of economy flow interchange) by an additional interconnection over the Railroad right-of-way.

ing Creek (Pa.), Conowingo (Md.), Perryville (Md.), and Benning (D. C.), under the specific terms of the contract and subsequent designation.[10] The Railroad provides transmission facilities between Perryville and Baltimore for supply of its lines south of the Baltimore tunnels and a part of a 110 kv circuit between Baltimore and Benning for the general transmission use of the supplying companies, including Baltimore Company and PEPCO. By a later agreement dated June 22, 1938, between the Railroad, Philadelphia Electric Company (Philadelphia Company), Baltimore Company, Penn Water, and Safe Harbor, provision was made for regular and constantly maintained parallel operation through the power transmission lines of the Railroad and connections therewith at Perryville (Pa.) and Thorndale (Pa.),[11] and for the cooperation of the parties in securing flexibility of power [10] supply, the best utilization of single-phase generating capacity available in the systems of the several contracting electric companies, and the shifting of loads.[12]

Penn Water is further committed to supply firm energy to Metropolitan Edison Company (Metropolitan Company) at York (Pa.) in the amount of 20,000 kw, subject to certain provisions for the increase or decrease of the amount and the limitation of hourly amounts;[13] to supply the entire electrical power and energy requirements of Philadelphia Company within a defined territory in the Coatesville (Pa.) area; to supply, under certain conditions, all of Pennsylvania Power & Light Company's (PP&L's) Lancaster 25-cycle and 60-cycle load requirements (Lancaster Co.,

10. Under the contract the Railroad may be billed for "additional load" upon either a metered or computed basis.

11. Philadelphia Company supplies the Railroad in the Philadelphia area.

12. As of the date of this agreement, June 22, 1938, the firm single phase capacity of Philadelphia Company was 134,350 kw and of the other electric companies, 50,000 kw.

13. The 20,000 cannot be adjusted by more than 10,000 kw either way, and the hourly amount of energy Penn Water is required to deliver is equal to the hourly integrated generation at Holtwood and Safe Harbor in excess of 50,000 kwh per hour, multiplied by the ratio of the foregoing firm power obligation to the rated effective capacity of Holtwood and Safe Harbor, less 50,000 kwh, but never less than Metropolitan Company's requirements above the latter's steam line.

Pa., and adjacent areas),[14] coupled with a contingent obligation to meet a limited deficiency in PP&L's firm load carrying capacity for its Harrisburg area and provide a supplementary secondary capacity service.

[11] Penn Water interchanges energy and capacity with Metropolitan Company on a steam and hydro economy basis as well as for emergency purposes; on an emergency basis with Philadelphia Company in the Coatesville (Pa.) area; and on a steam and hydro economy and an emergency basis with PP&L. Under certain flexible provisions of the contract with PP&L, Penn Water may be required to deliver, during times of high river flow, an additional amount of 25-cycle and 60-cycle power and energy equal to 20% of the Lancaster Load requirement, if Penn Water is able so to do.

Finally, on the bases of an interdependent agreement associated with the Railroad parallel operation agreement, already mentioned, Penn Water exchanges with Philadelphia Company through the Railroad's metering points at Perryville (Pa.) and Thorndale (Pa.) energy, on economy (intentional), unintentional, and emergency bases.

Penn Water's foregoing contracts comprise all of those under which there is transmitted and sold the energy generated by Penn Water or purchased by it, or otherwise acquired by either of the Respondents (Penn Water and Transmission Company) in this proceeding. While Safe Harbor is a party to several of the contracts, its position in the PP&L and Philadelphia Company contracts is a nominal one,[15] involving a legal technical-

14. Since interconnection of the Lancaster area with PP&L's main system, during days of low flow, the on-peak obligation may be reduced 20%. The supply of 4,000 volt service for a portion of the territory of the former Pioneer Electric Light Company is billed separately. What is here set forth is Penn Water's obligation under what is known as Option A.

15. Safe Harbor is not a contract payee under the Railroad agreement, nor under the Coatesville and Lancaster agreements wherein Penn Water is a party with the Philadelphia Company and PP&L respectively; while a party to the parallel operation agreement between the Railroad, Philadelphia Company, Baltimore Company, and Penn Water, no rates as to it are there involved. It is no longer a party to the York contract with Metropolitan Company. Indeed, the Coatesville and Lancaster agreements provide that Philadelphia Company and PP&L, respectively, may deal with Penn Water in all respects as if it were the only party contracting with it.

ity,[16] which has no bearing or effect upon the operations of the system.

[12] JURISDICTION.

Respondents challenge this Commission's authority to regulate any of Penn Water's rates [17] under provisions of Part I which deal with "licensees'" rates, or Part II which deal with those of "public utilities". Certain aspects of that challenge permit a simpler discussion if the Commission's authority under Part II is considered first.

Authority Under Part II.

One of Respondents' contentions is that the Commission is without authority under Part II "because its conditional authority under Part I of the Act is exclusive of its authority under Part II." In substance, the argument is that a Part I "licensee" cannot be a "public utility" under Part II, and that a licensee's interstate wholesale rate may be regulated by the Commission, if at all, only under Part I. The essentials of this argument we considered and rejected in *Safe Harbor Water Power Corporation* (5 FPC 221, 235-237). Our views expressed there remain unchanged and need not be repeated here. We turn then to consider the remaining aspects of the question whether the provisions of Part II apply here.

The rate provisions of Sections 205 and 206 of Part II apply only to a "public utility", defined in Section 201 (e) as "any person who owns or operates facilities subject to the jurisdiction of the Commission under this Part." Such facilities are specified in Section 201 (b) as facilities for "transmission of electric energy in [13] interstate commerce" or for "sale of electric energy at wholesale in interstate commerce", with certain exceptions which need

16. Involving possible savings in the Pennsylvania gross receipts tax.

17. Transmission Company has no separate rates. See *supra*, p. 1.

not be discussed here beyond reiterating that the provision of 201 (b) relating to State authority over the exportation of hydro electric energy is inapplicable. *Safe Harbor Water Power Corporation,* 5 FPC 221, 235. Section 201 (c) provides that "electric energy shall be held to be transmitted in interstate commerce if transmitted from a State and consumed at any point outside thereof * * *." Section 201 (d) defines a "sale of electric energy at wholesale" as "a sale of electric energy to any person for resale."

We must determine, therefore, whether the facilities owned and operated by Respondents bring them within these definitions. The record shows that Respondents own transmission facilities which transmit electric energy from Pennsylvania to Maryland and from Maryland to Pennsylvania, that such electric energy included energy generated in each of such States and consumed outside thereof, and that these facilities are used to effect the sale of electric energy by Penn Water to Baltimore Company. The facilities in Pennsylvania are owned by Penn Water and in Maryland by Transmission Company. Among these facilities are two 220 kv lines from near the Safe Harbor plant to points near Baltimore Company's Riverside and Westport substations and PEPCO's substation at Takoma Park, Maryland, and a 66 kv line from Penn Water's Holtwood plant to Transmission Company's Highlandtown substation at Baltimore, Maryland, where interconnection is made with the facilities of Baltimore Company. Energy generated at the Safe Harbor plant, the Holtwood plant, or obtained by interchange with Penn Water's Pennsylvania customers, is transmitted from within Pennsylvania over these facilities and consumed outside thereof by customers of Baltimore Company and by customers of PEPCO.

[14] Beyond any doubt, the foregoing facilities of both Respondents are "transmission" facilities of the type prescribed in Section 201 (b), and make it unnecessary to enumerate additional facilities of the same nature. It is

equally clear that those facilities are also used for sales by Penn Water for resale.[18]

Whether such sales are sales "in interstate commerce", however, presents a different problem. Nowhere does the Act define what constitutes a "sale in interstate commerce". Nor is there any provision which makes the meaning of that term dependent upon identification of all or a designated percentage of the energy sold, as energy flowing interstate. Congress thus left for determination by the Commission and the courts whether a particular sale is one "in interstate commerce". Although conceding this to be so, Respondents deny that Penn Water's sales to its Pennsylvania customers can be considered sales in interstate commerce because each includes varying amounts of energy which does not cross the State line.

The central fact disclosed by the record about Penn Water's sales in Pennsylvania is that they are not sales of the output of Penn Water's own plant, but sales of output of the integrated and coordinated interstate electric system of which Penn Water's facilities are an integral part. Penn Water's plant contributes to that output, such contribution, like those of Safe Harbor and Baltimore Company, being determined by the best use the system can make of the plant's capabilities.

[15] The record shows that this system operates in the following manner. The Safe Harbor plant generates both 60-cycle energy and 25-cycle single phase energy.[19] The 60-cycle energy is transmitted to Baltimore and to a point near the Takoma Park, Maryland, substation on the two 220 kv lines referred to above and, at times, energy generated by Baltimore Company or PEPCO is transmitted on

18. Such sales are Penn Water's sales to Baltimore Company and to Penn Water's Pennsylvania resale customers. The sale to the Pennsylvania Railroad is not a sale "for resale". Accordingly, our discussion at this point relates only to Penn Water's sales to its Pennsylvania resale customers and to Baltimore Company.

19. The reference to energy of a particular frequency and phase (*e. g.*, "25-cycle single phase") is intended as a convenient method of designating the frequency (cycles per second) at which the energy is transmitted and phase at which the particular circuit is designed to be operated.

these lines in the opposite direction to Safe Harbor. The 60-cycle energy thus received from Maryland, together with that generated at Safe Harbor, is delivered to Penn Water near the Safe Harbor plant and is transmitted by Penn Water over its two 66 kv circuits (Nos. 692 and 693) to Donegal Tap (Pa.) and to Lehman Farm (Pa.) in part for delivery to PP&L's lines and in part for delivery over two 66 kv circuits (Nos. 15 and 16) to Holtwood. The energy so delivered at Holtwood is sometimes, in whole or in part, energy received at Safe Harbor from Baltimore and Takoma Park, Maryland. It is thereafter delivered, with energy ~~operated~~ generated at Holtwood (hydro and steam), to Philadelphia Company (Coatesville, Pa.), Metropolitan Company (York, Pa.) or PP&L (Lancaster, Pa.), via Circuit No. 18. At times it is also in part converted to 25-cycle three phase energy and transmitted and delivered to PP&L (Circuit No. 3) or to Baltimore Company at Highlandtown substation, or to both. Some of the 60-cycle energy received at Safe Harbor from Maryland over the 220 kv circuits is at times converted at Safe Harbor to 25-cycle, singe phase, for Railroad use.

The 25-cycle single phase energy generated at Safe Harbor, and that available through its frequency changers, is delivered at Penn Water's adjacent Conestoga substation, from which it is re-delivered to [16] the Railroad for railroad purposes or for interchange at Thorndale (Pa.) with Philadelphia Company, or is transmitted over Respondents' 132 kv four circuit line for delivery to the Railroad for railroad purposes at Fishing Creek (Pa.), Conowingo (Md.) and Perryville (Md.) or for interchange at Perryville with Philadelphia Company.

Penn Water generates both 60-cycle energy, and 25-cycle three phase energy at its Holtwood plant. The 60-cycle energy, and energy from other system sources, is delivered to Philadelphia Company, Metropolitan Company or PP&L or is converted into 25-cycle three phase energy. Part of the Holtwood 60-cycle energy at times is delivered

through circuits Nos. 15 and 16 to PP&L at Lehman Farm or Donegal Tap; part is at times transmitted to Safe Harbor where it is further transmitted with other energy on the 220 kv lines to Baltimore or Takoma Park, Maryland; and part is at times converted to 25-cycle single phase energy at Safe Harbor and delivered to the Railroad facilities as described above.

Penn Water's 25-cycle generation is delivered to PP&L, some is at times converted to 60-cycle at Holtwood, and the remainder is transmitted over the four 66 kv circuits to Transmission Company's Highlandtown substation at Baltimore where it is delivered to Baltimore Company. The Highlandtown substation at times also receives from Baltimore Company a smaller amount of 25-cycle energy which is transmitted to Holtwood where it is delivered to PP&L or is converted to 60-cycle energy and delivered by Penn Water, to Safe Harbor or to the Pennsylvania customers.

It can be seen from the foregoing description of the operations of the facilities of Penn Water, Transmission Company, Safe Harbor and Baltimore Company that electric energy from the numerous system sources is available for consumption at any point on their combined facilities. Their power resources and transmission facilities are thus operated as an integrated and coordinated electric system, and all of Respondents' [17] facilities are integral parts of that system. The system foundation contracts referred to above (*supra*, pp. 7-8), governing the operation of the system, were designed to facilitate this completely integrated operation of system generating and transmitting facilities. That purpose found expression in the Supplemental Agreement of June 1, 1931, Article VIII of which reads in part as follows:

> "It is the intent among other things of this long term agreement to encourage the maximum cooperative utilization of the power and energy entitlements

and resources and other facilities of the parties hereto to the end that the joint use of their property and equipment shall give the greatest practical benefit to the public, and that all duplication of investment, and all unnecessary operating and maintenance costs, shall be avoided except such as would contribute toward the maintenance and improvement of the high standard of service rendered. The parties hereto shall cooperate to the fullest extent in the selection of the most suitable equipment in the co-ordination of their investment programs for additional generating capacity, transmission and tie-in facilities, etc., and shall so conduct their operations that economic interchange of power and energy during the different hours of the day, the seasons of the year, and over more prolonged periods, shall be encouraged in every possible way."

Contributing to the accomplishment of complete integration and pooling of the system's power resources are the provisions for over-all compensation to Penn Water and Safe Harbor without regard to the amounts delivered or the points at which delivery is made.

As a result, the direction of energy flows crossing the Pennsylvania-Maryland State line is governed principally by the volume of river flow. In general the flow of energy is south from Pennsylvania toward Maryland at all times during the spring months when the river is high. During the rest of the year the practice is to generate energy at the hydro plants of Penn Water and Safe Harbor so as to assist Baltimore Company in carrying its peak loads during the day, but at other hours and during weekends to stop hydro generation so as to allow the [18] ponds to refill. At these times the flow of energy tends to be to the north. However, the direction of the flow on the lines crossing the State boundary may change frequently according to the needs of the consumers in Pennsylvania or Maryland.

In this manner energy crossing the State boundary, with other system energy, is used to fulfill system require-

ments. There result times when system energy generated in Pennsylvania is used, mixed or unmixed, in meeting system requirements in Maryland. Similarly, there are occasions when system energy from Maryland is used, mixed or unmixed, in meeting system requirements in Pennsylvania. Energy flows in, across, and out of the system transmission network as the needs of the interconnected members develop from minute to minute and day to day.

It is accordingly evident that the operations of the unified system enterprise are completely interstate in character, notwithstanding the fact that system energy transactions at some particular times may involve energy never crossing the State boundary. The very purpose of the system foundation contracts was the elimination of artificial barriers, such as State boundaries. In the making of sales of system energy, such as those by Penn Water to its Pennsylvania utility customers, no distinction is made between energy crossing a State boundary and that which does not. Likewise, title to energy flowing on the system is of no significance among the companies comprising the system since they physically function as one enterprise and since the compensation features of the system contracts are so designed as to render considerations of title unimportant.

In the light of the foregoing facts, each of Penn Water's sales in Pennsylvania is clearly a system transaction of a character wholly [19] interstate even though at times it involves varying amounts of energy never crossing the State boundary, sometimes unmixed and sometimes mixed with out-of-state energy. In short, Penn Water is selling interstate system energy to purchasers outside the system. Such sales are sales "in interstate commerce".

The sale by Penn Water to Baltimore Company is also "in interstate commerce", but all of the energy thus sold crosses the State line. This latter sale is an intra-system transaction between two integral corporate parts of the system enterprise, which transaction is ancillary to the con-

summation of sales of system energy by Baltimore Company to purchasers outside the system, such as PEPCO, or in enabling Baltimore Company's use of that energy for delivery and sale to its resale customers.

The principles by which the foregoing conclusions are reached do not differ from those which must be applied in determining the character of Safe Harbor's sale of its output. With respect to that sale, the United States Court of Appeals for the Third Circuit has pointed out that Safe Harbor operates "as part of a large integrated interstate electric system" and sells all of its electric output, which "must be treated as an integrated whole", to "its two parent companies", Baltimore Company and Penn Water (*Safe Harbor Water Power Corporation v. Federal Power Commission*, 124 F. 2d 800, 802-803, 807). The energy sold by Safe Harbor, like that sold by Penn Water to its Pennsylvania resale customers, includes varying amounts of energy which never crosses a state line. All are nevertheless sales "in interstate commerce". And, incidentally, Safe Harbor's sale is like Penn Water's sale to Baltimore Company in that both are intra-system transactions.

[20] From what has been said, it clearly follows that facilities owned and operated by Respondents include facilities used for "the transmission of electric energy in interstate commerce" and for "the sale of electric energy at wholesale in interstate commerce". Each Respondent is thus a "public utility" within the meaning of that term as used in Part II. It is also evident that Penn Water's sales to its Pennsylvania resale customers and its sale to Baltimore Company are all sales "subject to the jurisdiction of the Commission" within the literal terms of Sections 205 and 206.

Respondents nevertheless contend that the Commission is without authority over the rate charged for the sales to PP&L, Philadelphia Company and Baltimore Company, claiming that such rates "are joint rates over which this

Commission has no jurisdiction".[20] This claim apparently rests upon the fact that Safe Harbor is a nominal party to Penn Water's contracts with PP&L and Philadelphia Company and upon the coordinated nature of operations of the integrated system. Both points may be conceded, but it does not follow that the rates involved are "joint" in any sense which removes them from this Commission's regulatory jurisdiction in this proceeding. In the first place, Safe Harbor sells its entire output to Penn Water and Baltimore Company and having received payment therefor constituting its entire revenue, it cannot sell any part of it to Penn Water's Pennsylvania customers. And while the [21] system operations are coordinated, the compensation features of the contracts by which Safe Harbor and Penn Water sell to Baltimore Company clearly refute any suggestion of "joint rate". Indeed, the record is replete with evidence, much of it supplied by Penn Water, which shows this "joint rate" contention to be wholly without substance.

Finally, Penn Water contends that its rates apply not only to energy but, indivisibly, to capacity services, transmission services, frequency control, power-factor cooperation, use of special facilities, and other services, as well as energy, and that this Commission's jurisdiction is limited to rates and charges relating only to the sale of "energy" in a strictly limited, technical sense. But all of these other so-called services are usual incidents of the wholesale sale of energy and many of them involve no segregable costs of service. The rates here involved, however they may be attributed to energy, capacity, and the other incidents referred to, are clearly within the scope of the statutory reference to "rates and charges * * * for or in connection with the * * * sale of electric energy subject to the jurisdiction of the Commission" (Section 205 (a)) and to "any

20. Significantly, Respondents do not contend that Penn Water's rate to Metropolitan Company is "joint". Though Safe Harbor, which was formerly a nominal party to that contract is not now a party, the real situation there is precisely the same as that involved in Penn Water's contracts with PP&L and the Philadelphia Company where Safe Harbor is a nominal party.

rule, regulation, practice or contract affecting such rate, charge, or classification" (Section 206 (a)). We perceive nothing in Respondents' sales for resale to take them outside the scope of the regulation provided by Congress.

Authority under Part I.

Respondents challenge the Commission's authority under Part I, claiming that the facts necessary to exercise of our jurisdiction under [22] Section 19 or Section 20 are not shown of record.[21] Since Section 19 deals with intrastate rates, our attention here may be confined to Section 20. For we have already seen that Penn Water's operations are all integral activities of the unified interstate systems, and its sales are sales in "interstate commerce".[22]

Respondents argue that this Commission has no authority over its interstate wholesale rates, absent a finding that the States [23] directly concerned—Maryland and Pennsylvania—are "unable to agree" on those rates, and that such a finding cannot be made on the record. However, the record shows that the Commissions of both States actively intervened, and during the course of such participation and in the briefs of their respective counsel, clearly demonstrated that their positions are irreconcilable and that they are "unable to agree." Accordingly, we expressly find that the States are "unable to agree."

---

21. Respondents apparently take the position that Penn Water must be treated as a licensee under Part I. Our order requiring Penn Water to apply for a license was sustained on review (*Pennsylvania Water & Power Company* v. *Federal Power Commission*, 123 F. 2d 155, *certiorari* denied 315 U. S. 806). Though no license has yet been issued (see *Re Pennsylvania Water & Power Company*, 4 FPC 426; *idem*, 4 FPC 500), it is entirely proper that Penn Water be treated as a licensee for rate-making purposes.

22. We confine our inquiry concerning jurisdiction under Part I to Penn Water's sales to its Pennsylvania resale customers and to Baltimore Company. Although Penn Water's retail deliveries to the Pennsylvania Railroad in Pennsylvania are deliveries in interstate commerce they are made under a contract which provides for deliveries in both Pennsylvania and Maryland by Penn Water and Baltimore Company. By a separate agreement among themselves, to which the Railroad is not a party, Penn Water and Baltimore Company have agreed upon a division, at the State boundary, of their deliveries, and a division of the revenue received. Nevertheless, the record here provides an adequate basis for a determination of Penn Water's costs in performing the service it renders under the contracts. See *infra*, p. 166.

Is Section 20 Repealed by Implication? Here, as in the Safe Harbor proceeding (5 F. P. C. 221), the contention has been advanced that a Part I licensee cannot be regulated under Part II. We have found that Penn Water must be treated as a Part I "licensee" for rate-making purposes, and that it is a "public utility" under Part II. Accordingly, if Section 20 be construed to confer upon the states a priority of jurisdiction over the interstate wholesale rates of a licensee-public utility, the conflicting part of Section 20 must be considered repealed by implication, or it must be given a construction avoiding conflict. We reaffirm and need not repeat our discussion of this problem in the Safe Harbor proceeding (5 F. P. C. 231, 239-243). Here, as there, we conclude that whether Section 20 may be given an interpretation avoiding conflict (p. 242)

> "* * * or whether the conflicting part of that section be deemed repealed by implication, the finding that the States are unable to agree is not a necessary condition precedent to our authority under that section, for the rates here in question, being interstate wholesale rates held beyond the regulatory power of the States in the *Attleboro* case, *supra*, the condition of section 20 would be inapplicable. Our jurisdiction, therefore, would not be dependent upon our finding that the States are unable to agree."

[24] DUE PROCESS.

On reviewing the entire record in this proceeding we think it is clear that Respondents have had a fair hearing on adequate notice.

The scope of the subjects and issues involved were clearly set forth in the Commission's orders instituting and enlarging the investigation herein and fixing the date of hearing. The detailed position of the Staff with respect to these subjects and issues, as developed during the course of the Staff's investigation, were set forth by Staff's counsel in his opening statement, and at other times during the

course of the hearing. There is not the slightest evidence that Respondents were unable to prepare their case because of any alleged vagueness in the specification of issues, and it may be noted that not a single witness presented by them had to or did condition his testimony upon what the position of the Staff might or might not be.

Nor were Respondents deprived of an adequate opportunity to present their evidence or to cross-examine adverse witnesses. Respondents' counsel had from 6 to 11 months, after direct testimony on Staff's case in chief, to prepare cross-examination of Staff's witnesses, and from 1½ weeks to 1 month, after service of Staff's prepared rebuttal testimony, to prepare cross-examination with respect thereto. Further, counsel had from 2 weeks to 11 months, after the date Staff witnesses left the stand, to prepare testimony and evidence in rebuttal of Staff witnesses, as well as ample time in which to prepare and present evidence rebutting Staff's rebuttal.

The exclusion of evidence of reproduction cost, as well as cost in present dollars and cost of a substitute plant, was entirely proper on basis hereinafter stated. Respondents fail to show that they have been prejudiced by any substantial error in any ruling of the Examiner excluding evidence.

The record in this proceeding, therefore does not support Respondents' claim of not having had ample notice and not having had a fair trial.

[25] ELECTRIC PLANT—RATE BASE.

In the determination of a rate base there is involved the investment in property used and useful in public service, consideration of accrued depreciation, and an allowance for working capital.

Evidence was received in this proceeding as to Respondents' electric plant in service as of December 3 (sic) [31], 1945, both as reclassified by Respondents in their original cost studies and as adjusted by the Staff during

the course of the Staff's examination of Respondents' accounts and records in preparation for the hearing herein. Evidence was received later in the proceeding, in the form of exhibits, projecting the foregoing amounts of electric plant in service to December 31, 1946.

Respondents also offered evidence as to (1) the cost of reproducing their properties as of December 31, 1945, (2) the cost as of the same date of producing a modern substitute plant therefor, located at the same place and capable of rendering the same service as Respondents' present facilities, and (3) the original investment in Respondents' properties stated in terms of the purchasing power of the dollar in 1945.

The evidence embraced in the foregoing offers was properly excluded by the Examiner. None of this excluded evidence is necessary for rate making purposes and none of it would aid the Commission in the determination of just and reasonable rates. Further, as all of such evidence was offered to show "fair value" in excess of actual [redacted]itimate original cost, and consequently in excess of "net investment", such evidence, had it been received, would be useless for rate making purposes [26] under Part I of the Act by express provision of Section 20 thereof.[23]

Electric Plant in Service.

Respondents' Electric Plant in Service[24] as of December 31, 1945 totalled (per books) $38,584,232.13. The Staff proposes the exclusion of a net amount of $5,663,493.90 of this total for rate base purposes leaving an adjusted Electric Plant in Service in the amount of $32,920,738.23. During the course of the Staff's field examination and the hearing proceedings, Respondents conceded certain proposed adjustments in the net amount of $2,208,902.08 leaving in issue a balance of $3,454,591.82. Deducting from this balance $75,722.25 proposed by the Staff for reclassification

23. *In the Matter of Safe Harbor Water Power Corporation* (IT-5914, 1946) 5 FPC 220, 243-244.

24. Electric Plant in Service as used in this opinion embraces Electric Plant in Service and in Process of Reclassification as used in the exhibits in this proceeding.

to Plant Held for Future Use but claimed by Respondents for inclusion as a part of the rate base, the amount considered in dispute at this point totals $3,378,869.57 [25] and is composed of the following items:

[27]

1. Claimed value of McCall Company common stock (par $100) issued allegedly for land and water rights or organization:		
Issued to Hutchinson, 18,840 shares @ $25	$ 471,000	
Issued to Harlow-McGaw, 1,000 shares @ $25	25,000	
Issued to C. D. Pullen, 150 shares @ $25	3,750	
Issued for Organization, 10 shares @ $25	250	$ 500,000.00
2. Claimed value of McCall Company stock allegedly issued to Harvey Fisk & Sons for management services (⅜ of value of 1,875 shares preferred and 17,537½ shares common)		199,570.31
3. Stock issue expense:		
Penn Water stock expense	$ 81,906.59	
Alleged McCall Company bond expense claimed applicable to Penn Water stock exchanged for McCall Company bonds	331,703.15	413,609.74

25. I. e. $5,663,493.90 less $2,208,902.08 less $75,722.25 or $3,378,869.57.

4. Claimed value of 5,000 shares of Penn Water common stock at $60 allegedly issued to Aldred for management services (11/1/08 to 11/1/12, prorated to period 11/1/08 to 10/1/11)		218,750.00
5. Interest during construction by McCall Company and Penn Water		1,201,368.57
6. Expenditures during McCall Company's "cessation period"		143,981.46
7. Promotion expense, Penn Water		29,601.59
8. Credit for property transferred by McCall Company		37,063.98
9. Profit on property sold by Penn Water		119,940.20
10. Flashboard development expense		44,961.06
11. Roller dam investigation expense		4,793.91
12. Charges to flowage basin account:		
Period 1910-1924	$150,346.37	
Period 1925-1936	27,283.37	177,630.24
13. Survey of storage reservoir sites		12,420.77
14. Cost of land acquired from affiliate		24,151.83
15. Cost of defending title to Mill tract		1,427.42

16. Conowingo backwater litigation expense	39,301
17. Expense incurred on transmission line built by others	12,459
18. Expense incurred on substation built by others	5,668
19. Loss on materials and supplies	13,033
20. Cash not accounted for	130
21. Susquehanna Contracting Company expense	6,621
22. Construction fee charged Holtwood Power Company (Affil.)	50,194
23. Organization expense of Holtwood Power Company (Affil.)	17,875
24. Tower foundations abandoned	3,595
25. Items previously charged to operating expense or to the depreciation reserve	96,116
26. Contribution to Holtwood Church	1,400
27. River coal marketing expense	6,132
28. Value of McCall Ferry Company stock acquired from Hutchinson	(200.0
29. Miscellaneous items in plant account proposed for elimination by Respondents	(2,731.8
	$3,378,869

[28] *Control of the McCall Company and Distribution of its Stock.*

Before taking up the respective items of claimed cost comprising the total of $3,378,869.57 in dispute, consideration will be given to the questions, common to Items 1, 2 and $331,703.15 of 3, above, of whether certain McCall Company stock was distributed in payment for services and properties, as Respondents claim, and of whether Harvey Fisk & Sons, one of the alleged recipients, obtained exclusive control of the McCall Company so that the distribution of the stock to the other principal alleged recipients, after it obtained such control, can be treated as arm's length transactions not subject to the no-profits-to-affiliates rule. As we have recently reiterated, it is incumbent upon the licensee under the Act to show, with respect to property acquired from an affiliate, that the amount it claims as cost was cost to the affiliate, not profit. *Minnesota Power & Light Company,* decided September 2, 1948, Opinion No. 167, Project No. 346, and cases there cited (p. 8, *et seq.,* mimeographed copy); compare *St. Croix Falls Minnesota Improvement Company, et al.,* 3 F. P. C. 3, 27-29 (dissenting opinion).

The project was conceived by Cary T. Hutchinson, who later acted in the capacities as Director and Chief Engineer of the McCall Company. His preliminary and promotional activities covered a four-year period, culminating, in the Spring of 1905, in the completion of financial arrangements for a 155-foot dam (increased in June 1906 to 165 feet), with 50,000 horsepower installed, and the incorporation of McCall Company on April 14, 1905, to construct, own and operate the development. The McCall Company was organized by the merger of two inactive companies previously incorporated by Hutchinson in 1902, and at the outset had the same incorporators, stockholders, and directors as the predecessor companies, all nominees of Hutchinson and his associates.

[29] Financing activities were initiated before the creation of the McCall Company by the formation of a syndicate

managed by H. F. Dimock (Hutchinson's father-in-law) S. R. Bertron (of Bertron, Storrs & Griscom), and Charle F. [T.] Barney (President of Knickerbocker Trust Com pany), and the issuance of a combined prospectus and un derwriting agreement dated March 1, 1905, under which i was proposed to obtain subscriptions to $8,000,000 princip amount of bonds. The original syndicate, after obtainin subscriptions to approximately $4,000,000 of bonds (prin cipally, or entirely by Lee, Higginson & Company and C. A Coffin), enlisted and obtained the aid of Harvey Fisk Sons. Negotiations with the Fisk firm resulted in the issu ance of a bond and stock purchase agreement dated Marc 25, 1905,[26] which set forth the arrangement between th Fisk firm, as "Bankers", and the subscribers, severally However, any arrangement agreed upon between the synd cate members themselves as to control of the McCall Com pany, distribution of its stock, etc., is unknown as ther is no available document which discloses the terms thereo

There was sold at 90 cents on the dollar a total o $8,075,000 principal amount of bonds, including th $4,000,000 of subscriptions [30] obtained by the origina syndicate and kept in force under the March 25th bond an stock purchase agreement. It was expressly provided in th March 25th agreement that the bonds sold thereunder wer subject to Harvey Fisk & Sons' option to repurchase a or any part of them from the original subscribers at th initial sales price (90), unaccompanied by the bonus stock,

26. The March 25, 1905, bond and stock purchase agreement recites part:

"* * * the Bankers (Harvey Fisk & Sons) have been requested a are willing to aid in financing the said Plan to the extent of taking agre ments from the Subscribers for the purchase of bonds and preferred sto of the Power Company, of acquiring the bonds and stocks for delive under such purchase, and of making or procuring the loans hereinaft mentioned;

* * *

"No partnership or joint relation of any kind results from this agre ment, nor do the Bankers assume any fiduciary relation of any kind, any obligation to cause the plan aforesaid to be undertaken or carri out."

. The subscribers to the $4,000,000 subscriptions sold before executi of the March 25, 1905, agreement apparently received a 50% preferred sto

at any time up to one year after completion of construction. This agreement is the only contemporaneous evidence which refers to compensation to be received by the Fisk firm. None of the records of that firm relating to the McCall Company financing are now in existence, and there is no other contemporaneous evidence showing that the Fisk firm either received, or was entitled to, any compensation other than that hoped to be realized through the resale of the bonds at a price above 90.

The issued and outstanding stock of the McCall Company consisted of 50,000 shares of common and 41,165 shares of preferred. On the basis of executed contracts the distribution to be made of those [31] securities was as follows:

	Common	Preferred
Incorporators' Shares	10	
Issued by Susquehanna Contracting Company[28] in exchange for properties:		
Harlow-McGaw[29]	1,000	
Pullen	150	
Hutchinson	48,840	4,000
Retained by Susquehanna Contracting Company for bond subscriptions		37,165
	50,000	41,165

bonus with the bonds, notwithstanding the fact that the March 25th plan provided for and the other subscribers received only a 45% preferred stock bonus.

28. The Susquehanna Contracting Company, a paper company, was organized on June 12, 1905, and the bond and stock purchase agreement of March 25, 1905, under which the bond subscriptions had been sold, together with the rights, obligations and liabilities of the Fisk firm thereunder, except for the Fisk firm's option to repurchase the bonds at 90 (which it retained), were assigned to the Contracting Company upon its formation. The Fisk firm was appointed agent to carry out the Contracting Company's obligations under the March 25th agreement. There is evidence indicating that the purpose of the Contracting Company was to relieve the Fisk firm "as a partnership, from any liability which might result from the financing."

29. Harvey Fisk & Sons and Bertron, Storrs & Griscom executed contracts for the purchase of the Pullen option and the Harlow-McGaw proper-

[32] Respondents claim that the contract for the purchase of Hutchinson's properties was merely the vehicle for distributing 30,000 shares of common and 1,875 shares of preferred stock to Harvey Fisk & Sons (17,537½ shares of common and 1,875 shares of preferred), Bertron, Storrs & Griscom (7,462½ shares of common) and Lee, Higginson & Company (5,000 shares of common). This claim is supported as to Bertron, Storrs & Griscom and Lee Higginson & Company by the investment records of Bertron, Storrs & Griscom which show that firm's receipt of 12,462½ shares of the McCall Company common, of which 5,000 were transferred to Lee, Higginson & Company under date of December 11, 1906, as its commission for the sale of $2,000,000 principal amount of the McCall Company bonds. Beyond this there is no credible evidence to support Respondents' claimed distribution. Further, since the evidence does not indicate the amount of bonds, if any, sold by Bertron, Storrs & Griscom, there is serious question as to whether it was intended that that firm should retain the 7,462½ shares as compensation for services rendered. Respondents' claim must be rejected insofar as it relates to Harvey Fisk & Sons.

On the question of control, likewise, Respondents' claim that Cary T. Hutchinson lost control of the enterprise in the Spring of 1905 to Harvey Fisk & Sons must be rejected. Such credible evidence as there is leads us to conclude that when the Fisk firm came into the financing, after

---

ties on April 27th and 29th, 1905. Upon its creation the Contracting Company executed an agreement with the McCall Company providing for the transfer to the latter of the Hutchinson properties, the Pullen option, the Harlow-McGaw properties and $6,400,000 in cash, which cash had already been provided for through the sale of bond subscriptions and a loan agreement. In return, the McCall Company agreed to issue to the Contracting Company $8,483,000 in bonds ($8,075,000 of which had been sold), 41,165 shares of preferred and 49,990 shares of common stock. To place the Contracting Company in position to carry out its agreement with the McCall Company, the contracts previously executed for the purchase of the Harlow-McGaw properties and the Pullen option were assigned to the Contracting Company, which company also executed an agreement for the purchase of Hutchinson's properties for a stated consideration of $750,000 in cash, 4,000 shares of preferred and 48,840 shares of common stock.

half of the bonds had been sold, the original promoters merely opened their ranks to an additional member and that all thereafter shared control of the McCall Company until it encountered financial difficulties and went into receivership.

[33] We think it is clear that during the period from March, 1905, to December, 1908, control was shared by Hutchinson with Bertron, Storrs & Griscom; Lee, Higginson & Company; C. A. Coffin and Harvey Fisk & Sons as a result of a pooling of their interests. For one thing, all of the McCall Company's stock was deposited under a voting trust. The three trustees constituting the voting trust committee were H. F. Dimock, Hutchinson's father-in-law, who had been associated with Hutchinson from the outset, and was president of the McCall Company; S. R. Bertron, of Bertron, Storrs & Griscom, representative of the bankers in the March 1, 1905, financing syndicate; and W. M. Barnum, a partner in the Fisk firm. Thus, each of the three interests was represented in the voting trust committee. In case of a vacancy on the committee, the remaining two members could have appointed a successor.

Additional evidence indicating that each interest shared in control is to be found in the fact that each was represented on the McCall Company Executive Committee, and, as shown by a letter dated January 19 [July 10,] 1907, the management of the Company was in the hands of a committee on which was a member of each of the three banking firms and "also * * * Mr. C. A. Coffin and Mr. H. F. Dimock who has been interested in the project for a number of years."

Moreover, in a letter dated June 22, 1906, from Hutchinson to Dimock, it is disclosed that Mr. Eddy of the law firm of Simpson, Thatcher & Bartlett had asked Hutchinson "what Board of Directors shall be elected at the annual meeting of the stockholders" and Hutchinson had told him "to re-elect the present Board of Directors, with one [34] possible exception." This indication of at least some voice by Hutchinson in the selection of directors

is unopposed by any showing that the Fisk firm controlled the directors.

We find, therefore, that the McCall Company was not controlled solely by Harvey Fisk & Sons, but that control was shared with Hutchinson and the other interests.

[35] *Claimed Cash Value of McCall Company Common and Preferred Stock.*

Respondents claim $1,031,273.46 (comprised of $500,000, Item 1; $199,570.31, Item 2; and $331,703.15, part of Item 3) as the cash value of common and preferred stock of the McCall Company allegedly issued as part consideration for land and water rights and for services performed by the bankers, such claim being based upon asserted cash values of $25.00 and $50.00, respectively, per share for the common and preferred stock.[30]

None of the issued and outstanding stock of the McCall Company was sold for cash. In the absence of market quotations, Respondents' attempt to substantiate the claimed cash values for the stock through statements, prepared in 1938 and 1939, some thirty-four years after the transactions in which the stock was issued, and signed by or attributed to four individuals,[31] not one of whom states that his assigned values represent the "cash value" of the stock in June, 1905, i. e., the date of the transactions in which the stock was issued, and not one of whom ever sold or purchased any of the McCall Company stock at those valuations, or at any valuation.

[36] While Respondents assert that the statements were "legally admissible as secondary evidence" because "of

30. Both common and preferred stock had a par value of $100 per share.

31. Cary T. Hutchinson; Mr. Pliny Fisk, a former member of the Fisk firm; George C. Lee, a former member of Lee, Higginson & Company; and James E. Hopkins, of the law firm of Coudert Brothers. Their valuations ranged from $18.00 to $30.00 per share for the common stock. We do not think Respondents' selection of $25.00 per share for the common stock, used for the purposes of their original cost claim, is supported by such valuations. The $50.00 valuation for the preferred stock is based upon the opinion of Mr. Pliny Fisk, whose firm is the only one claimed to have rendered services for which preferred stock was issued.

the death'' or ''physical incapacity to testify'' of the four individuals, the record contains no showing that Lee and Hopkins were in fact unavailable because of age, health or other reasons. While it is true that Fisk and Hutchinson were dead at the time of the hearing, Respondents made no effort to produce the attorney who obtained the Fisk affidavit and statement attributed by that attorney to Fisk, the attorney who secured Hutchinson's purported cross mark to ''Hutchinson's affidavit,'' or the physician who, though not present at the time, prepared an affidavit to the effect that Hutchinson, who was then at death's door, had the ability to understand the purport of his actions.

As to the Hopkins affidavit, it need only be further stated that he admits therein that he is ''not qualified to place a value on that stock as such * * *.'' Then, too, in the opinion of Respondents' witness Gunn, of the affidavits and statements obtained, Hopkins' affidavit was the least reliable.

Lee, in his affidavit, admits that it was ''difficult'' at that late date to place a value on the 5,000 shares of common stock received by his firm, but nevertheless was of the opinion that his ''firm would not have participated in the McCall Ferry proposition [37] unless they believed their stock compensation has a total value of at least $125,000 * * *. This would make the stock worth $25.00 per share.'' It was Mr. Gardiner Lane, another partner of Lee, Higginson & Company, who was particularly responsible for that firm's financing activities in connection with the McCall Company. What duties, if any, Lee had in that regard is not shown in the record. The fact that Lee was not presented for cross-examination as to many of the vague and indefinite statements contained in his affidavit; that he valued services and assigned that value to stock, instead of determining the ''cash value'' of the stock, makes his opinion unreliable for the purposes of determining the cash value of the stock involved in Respondents' claim.

In his affidavit, Fisk states that his recollection had been ''dimmed'' as a result of the lapse of so many years,

and that "he had taken very little active interest" in the McCall Company enterprise. Fisk valued alleged services and then assigned such value to the stock he thought his firm might have received as compensation therefor, such method proceeding upon the questionable assumption that if the services had a certain value, the stock exchanged therefor had an equivalent value. Moreover, since there is no merit to the contention that the Fisk firm received stock compensation for either financial or management services, Fisk's $50.00 valuation for the preferred stock and $18.00 for the common were arrived at by valuing non-existent services.

[38] In the "Hutchinson affidavit" it is stated that "the common stock should return a dividend of from 2% to 3% of its par value, which would make it worth from $20.00 to $30.00 per share, based on earnings alone." Such a method of valuation, however, not only starts with an unestablished premise, but is contrary to Section 14 of the Act which expressly provides that "net investment shall not include or be affected by * * * prospective revenues." Furthermore, this assertion as to the value of the common stock is at variance with, and effectively refuted by, a letter written by Hutchinson on January 19, 1906, in which he expressed the hope that 150 shares of common stock of the McCall Company which he was giving to his two associates "before long will be worth something."

Because of the importance which Respondents attach to the document referred to as the "Hutchinson affidavit" it is desirable to set forth its history. That document is dated January 13, 1939, and was prepared at the request of Penn Water's Chief Engineer Gunn, who was in charge of its accounting reclassification, and upon the basis of representations made by him to an attorney in Miami, Florida, on or about January 12, 1939 (Hutchinson died about four days later), or within one or two days after Gunn received word in Baltimore, Maryland, of Hutchinson's "very bad health." Upon his arrival in Miami by

plane, Gunn did not confer with Hutchinson,[32] but rather with Hutchinson's [39] personal attorney, Rhinehart, who, on no previous occasion had conferred with Gunn, and had no knowledge of the early history of the Holtwood development. According to Rhinehart's affidavit dated January 14, 1939, he conferred with Gunn "for several days" in Miami; "prepared an affidavit setting forth in detail information which Mr. Hutchinson was in a position to give"; and on January 13, 1939, "conferred with Mr. Hutchinson in his home * * * at which time he read to him the aforesaid affidavit and after due consideration Mr. Hutchinson endeavored to subscribe his name to the instrument; that he was unable to do so, but then and there did affix his signature in the form of a cross mark * * *." Under these circumstances, some measure of the weight to be given the affidavit can be gained from a consideration of the nature of Gunn's information from which the affidavit was written.

On January 9, 1939, less than four days prior to the preparation of the "Hutchinson affidavit", Gunn had addressed a letter to Mr. Pliny Fisk's attorney requesting that the latter attempt to obtain vital data from Fisk,[33] including information as to the "form of compensation" Harvey Fisk & Sons received "for their services"; the manner in which the Fisk firm looked "upon the arrangement through which they became interested in the McCall Ferry proposition", and [40] whether that firm considered "the transaction a purchase of control from the Hutchinson-Dimock interest". In other words, although Gunn had had several previous conferences with Hutchinson, he still had not ascertained the facts with reference to the points mentioned in his letter. Nevertheless there is contained in the "Hutch-

32. Witness Gunn testified that he had previously conferred with Hutchinson on several occasions with respect to the early history, etc., of the project. Gunn had no "personal knowledge whatever of McCall (Company's) construction nor, indeed, any of the events in the history of the Holtwood Company prior to 1930."

33. In his affidavit dated December 28, 1938, twelve days before, Fisk had stated that he was "unable at this date to give an exact statement of the total compensation to my firm."

inson affidavit" the categorical statement that "the bankers were to receive 30,000 shares (of common stock) and that the remaining shares * * * were to be given Affiant * * *."[34]

[41] As further support for the claimed cash value of the stock, Respondents rely upon the testimony of witness Uhl who expressed the opinion that the fair market value of the properties required for a dam with a crest elevation of 155 feet was $3,300,000 as of March 1, 1905. That valuation was based entirely upon engineering factors designed to reflect power site value and had no relation to cost. It is the type of valuation consistently held by the Commission and the courts to be of no probative value in determining the cost of a project (*Alabama Power Company v. McNinch*, 94 F. 2d 601, 606-609, 614-616; *Alabama Power Company v. Federal Power Commission*, 128 F. 2d 880, cert. den. 317 U. S. 652; *Alabama Power Company v. Federal Power*

34. In his letter dated January 9, 1939, Gunn enclosed a narrative statement he had prepared covering "our story of Harvey Fisk & Sons' connection with the McCall Ferry development." He explained that "Because many essential facts in this story are not now available, we have found it necessary to draw freely upon suppositions and conjectures." The following comparison of excerpts from this narrative statement and an excerpt from the "Hutchinson affidavit" reveals the extent to which Gunn's tentative "story" crystalized into a categorical statement of fact within the brief span of one or two days although apparently he had obtained no further information:

Narrative Statement Enclosed in Letter dated 1/9/39

"From an analysis of the material in our possession, *it appears* that the Hutchinson group not only gave up their syndicate plans but also had to surrender control to Harvey Fisk & Sons. *We have been unable to determine how this control was actually exercised.*

* * *

"* * The fact that these shares came from the 18,840 block *is the basis for the deduction* that this block of stock was owned by the Hutchinson interests. *It would, therefore, appear* that the certificate for 30,000 shares representing 60% of the common stock *probably* went to the Bankers. * *" (Italics supplied)

Hutchinson's Affidavit dated 1/13/39

"* * the Fisk firm * * insisted as consideration for its efforts that a *majority* of the common stock of the proposed development corporation be issued to Harvey Fisk & Sons, or its nominees. Affiant recalls that of the 50,000 shares of common stock to be issued under the * * plan, the bankers were to receive 30,000 shares and that the remaining shares * * were to be given to the Affiant * *." (Italics supplied)

Commission, 134 F. 2d 602, 607), and is entitled to no weight.

Not only have Respondents not sustained the claimed cash values of $25.00 and $50.00, respectively, for the common and preferred stock, but it is clear that the stock could have had no cash value at all. The McCall Company was a newly created company. No contracts for the sale of power [42] had been obtained. The plans and specifications for the development had not been perfected. Not even the exact location of the dam had been determined. Moreover, because the development was a pioneer project, was in fact the first attempt in the United States to erect a hydroelectric project of its type, it was naturally viewed more critically by the investing public than would be the case today.

Contributing to the lack of a cash value for the stock was also the fact that the development involved a large initial investment and heavy prior charges for bond interest which dimmed any immediate prospect for dividends on the stock—particularly on the common stock. Furthermore, the fact that the initial syndicate encountered difficulties in disposing of the prior lien bonds at 90 with a 50% preferred stock bonus, necessitating calling on the Fisk firm for assistance, clearly indicates that the stock could not have been sold for cash.

Further demonstration of the fact that the stock had no cash value is found in the testimony of J. H. Harlow [35] in a condemnation proceeding in 1907 to the effect that the value of the common stock "was practically nothing; you might call it anything you like, it is common stock and may be a long time before it has any value." He had previously testified in the same proceeding that the common stock "has not any market value yet."

[43] Since we conclude that neither the common or preferred stock had any cash value in 1905, the aggregate cash

35. Of the Harlow-McGaw interests which had assembled a large part of the lands ultimately used for this development and had sold it to the McCall Company for bonds and stock of that company and cash.

value claim of $1,031,273.46 must be disallowed. However, because there are several additional grounds for the disallowance of most of the claimed cost sought to be established by the use of that cash value, the individual amounts will now be considered.

[44] a. *Claimed Cash Value of Stock Allegedly Issued to Hutchinson as Compensation for Properties.*

In addition to $750,000 cash paid to Hutchinson under the contract dated June 14, 1905, for his 2,896.54 acres of land and water rights, Respondents contend that $471,000 should be allowed in the rate base as actual legitimate original cost of such land and rights, representing the claimed cash value of 18,840 of the 48,840 shares of the McCall Company common stock issued under that agreement. Since, as already shown, the stock then had no cash value, this claim cannot be allowed. But even assuming, *arguendo,* it had a cash value, the claim would still have to be disallowed.

A cost estimate covering the project, prepared by Hutchinson himself on December 18, 1905, after the transfer of his properties to the McCall Company, lists the cost to McCall Company of his properties at $750,000. Other credible evidence is to the same effect and the March 25, 1905, financing plan provided that the McCall Company "bonds and stock" were to be issued, among other things, "for all *profits* in connection with the bringing together and turning in" of properties. Hutchinson was, as we have shown, at all times in control or sharing control of the McCall Company. Under the Commission's no-profits-to-affiliates rule such profits are not actual legitimate original cost since they did not arise in an arm's length transaction and there is no showing of cost incurred by Hutchinson in excess of the $750,000 cash payment (*Pennsylvania Power & Light Company v. Federal Power Commission,* 138 F. 2d 445, 450, cert. den. 321 U. S. 798; *Niagara Falls Power Company v. Federal* [45] *Power Commission,* 137 F. 2d 787, 792-795, cert. den. 320 U. S. 798; *Puget Sound Power & Light Co.*

v. Federal Power Commission, 137 F. 2d 701, 703; *Alabama Power Company v. Federal Power Commission,* 134 F. 2d 602, 609).

While the staff did not question any portion of the $750,000 cash paid to Hutchinson, which was apparently intended as compensation for all of his efforts, expenditures and obligations, it appears that Hutchinson paid $155,000 for the half (approximately) of his properties which he had acquired from York Furnace Power Company and which he transferred to McCall Company under the June 14, 1905, agreement. While the price he paid for most of the parcels comprising the other half is not shown, it is reasonable to assume from the known prices paid for a few of those parcels that the cost thereof was less than, or at most did not exceed, the $155,000 paid for the York Furnace properties, which would make the total price of all of his properties not more than $310,000. This would leave $440,000 of the $750,000 cash paid to Hutchinson to cover his other expenditures and compensation for his efforts.

Furthermore, not all costs of such efforts would be properly includible here. Merely because Hutchinson incurred expenditures in connection with his promotional and other activities does not mean that they all constitute proper project costs. Thus, such cost as he incurred in connection with his financing activities would be disallowable, in view of the 6% interest allowance hereinafter made (*Northern States Power Co.,* 1 FPC 597, 600). Moreover, expenditures made by Hutchinson in his unsuccessful efforts to secure the enactment of legislation [46] favorable to his promotional plan are likewise disallowable (*Northern States Power Company, supra,* at p. 337). However, there is no means of determining at this late date the aggregate amount and exact nature of all of Hutchinson's expenditures. For this reason, and in order to be abundantly fair to Respondents, we find that a reasonable allowance for actual legitimate cost of this item is $750,000.

b. *Claimed Cash Value of Stock Issued to Harlow-McGaw and Pullen.*

Inasmuch as the McCall Company stock had no cash value when issued, the claim of $28,750 for 1,150 shares of common stock of that company issued under contracts dated April 27th and April 29th, 1905, to the Harlow-McGaw interests (1,000 shares) and C. D. Pullen (150 shares), respectively, as further consideration for lands and rights owned by them, in addition to $210,000 cash and $225,000 cash value of bonds paid to them and not questioned by the staff, must be disallowed.

c. *Claimed Cash Value of Incorporators' Shares Acquired by Hutchinson.*

The McCall Company was formed in April, 1905, by the merger of Hutchinson's two inactive companies, i. e., The Hillside Water and Power Company and Susquehanna Water and Power Company, with ten shares of the McCall Company common stock being given Hutchinson in exchange for the stock of the merged companies. The claimed cash value of this stock, $250.00, has been classified by Respondents in Account 301, as Organization Expense.

Even if the stock had had a cash value, the issuance of the stock was not an organization expense incurred by the merging companies. [47] Moreover, it is reasonable to conclude that the $750,000 payment Hutchinson received for his properties covered all costs previously incurred by him, including the cost of incorporating the predecessor companies. For these reasons, the $250.00 may not be allowed as part of the rate base.

d. *McCall Company Stock Allegedly Issued to Harvey Fisk & Sons for Management Services.*

Respondents contend that Harvey Fisk & Sons, following execution of the March 25, 1905, financing plan, rendered both banking and management services to the McCall

Company. For the alleged management services Respondents claim an amount of $199,570.31, equal to three-eighths of the value Respondents claim for 1,875 shares of preferred and 17,537½ shares of common stock of the McCall Company. The other five-eighths portion of the stock (as hereinafter shown in connection with the amount of $331,703.15 (part of Item 3) claimed as Penn Water stock issue expense) is claimed as compensation paid to the Fisk firm for banking services.[36]

[48] As has been shown, not only did the stock have no cash value when issued, but the claimed distribution thereof to the Fisk firm has not been sustained. It is hereinafter further shown that there is no basis in the evidence for the contention that the Fisk firm rendered management services. But even assuming, *arguendo,* (a) a cash value for the stock, (b) issuance of the stock to the Fisk firm, and (c) rendition of the alleged services, allowance of any portion of the claim either for management or banking services, in the absence of a showing of cost to the Fisk firm, would do violence to the no-profits-to-affiliates rule. This is so irrespective of whether the Fisk firm shared control of McCall Company with other syndicate members, as herein found, or exercised sole control over that company, as alleged by Respondents.

Neither the March 25, 1905, financing plan nor any of the other contemporary evidence of record supports the contention that the Fisk firm managed McCall Company. In fact, the financing agreement provided that the Fisk firm was not even obligated to "cause the * * * plan to be undertaken or carried out." That agreement further provided that the bonds sold thereunder were subject to the Fisk firm's option to repurchase all or any part thereof at

[36] 36. The division between banking and financial services is based upon statements contained in the Fisk affidavit that the value of his firm's banking services was at least $250,000, and his firm's management services was not less than $150,000. It is to be noted, however, that the amount of $199,570.31 claimed for management services exceeds by more than $49,000 the estimate placed thereon in the Fisk affidavit, and such excess lacks any color of support in the Fisk affidavit.

the initial sales price (90), unaccompanied by the bonus stock given with the bonds, at any time up to and including one year after completion of construction, it apparently being contemplated that in the event the development had by that time proved successful, the bonds might then be repurchased and resold by the Fisk firm at a profit. In the absence of evidence indicating to [49] the contrary, it is entirely possible that it was the intention of the syndicate members that the Fisk firm was to be compensated for its services through the repurchase and resale of the bonds. If such was the intention, it could hardly be contended that the Fisk firm was entitled to stock compensation for any purpose.

There is no evidence showing that Harvey Fisk & Sons were consulted on matters of policy, or the construction of the project, the allocation of funds, the expenditures of the McCall Company, the selection of personnel, the negotiation of power contracts, the conduct of law actions, the determination of the ultimate level at which it was decided to build the crest of the dam, or even as to the cessation of construction activities in 1907, when the McCall Company encountered financial difficulties. In fact, the evidence is that Harvey Fisk & Sons had no more to do with management than each of the others participating in promotion of the development, as to whom no claim is made that management services were rendered. Correspondence of Lee, Higginson & Company dated July 19, 1907, obtained from Respondents' files discloses that "The management of the company (McCall Ferry) is in the hands of a committee on which is a member of the firms of Harvey Fisk & Sons, Bertron, Storrs & Griscom, and Lee, Higginson & Company; also on this committee are Mr. C. A. Coffin, and Mr. H. F. Dimock who has been interested in this project for a number of years." And as testified by the Commission's accounting examiner, his search of the Respondents' files failed to disclose even the slightest indication of any management activities on the part of the Fisk firm by W. M.

Barnum (a partner [50] of the Fisk firm through whom the management of McCall Ferry was supposed to have been carried out); that he was unable to find any communication from or to the Fisk firm or Barnum dealing with the management of McCall Company; and that the files revealed that it was to the President of the McCall Company, Mr. Dimock, that reports and communications were addressed.

Respondents' witness Gunn doubted that a formal management agreement with the Fisk firm ever existed, and testified that that firm never received any specific amount of stock for management services as distinguished from financial services. He knew of no contracts negotiated by Barnum, or of any reports or management functions which the McCall Company officers cleared through the Fisk firm or Barnum. Furthermore, he could not point to any matter which Barnum was instructed to investigate or which he introduced at Executive Committee meetings, or to any written orders or communications relating to management or construction issued by the Fisk firm or Barnum to officers of McCall Ferry or to the construction contractors, and could not identify any individual who was employed by Barnum for McCall Ferry.

Not only is there no support for the contention that the Fisk firm rendered management services, but it clearly appears that there was no necessity for the rendition of such services by that firm. The McCall Company had a special Board of Advisory Engineers comprised of "four of the most prominent engineers in the United States and known to practically every engineer." Hutchinson was a member of that Board and as Chief Engineer of the company had a number of capable assistants. [51] Hugh L. Cooper was Hydraulic Engineer and Manager of Construction. Sanderson & Porter superintended the electrical construction and managed the accounts. As testified by Respondents' witness Gunn the McCall Company "was organized by thoroughly capable people in every department of its business.

It was advised by the most eminent engineers in the country. It had capable people in every branch of it."

From the foregoing it is clear that the statements contained in Fisk's affidavit,[37] to the effect that his firm managed the McCall Company, are at variance with the facts established by competent evidence. For example, Fisk asserted that the "primary responsibility for supervising the construction of the project, the selection of personnel, and the selection of experts, engineers and contractors was imposed upon Harvey Fisk & Sons." Actually such responsibility definitely appears to have rested with the Company's officers, [52] its special Board of Advisory Engineers, Hutchinson, Cooper and Sanderson & Porter.[38]

There being no justification for the allowance of the amount of $199,570.31 on any basis, it must be excluded from the rate base.

e. *Claimed Stock Issuance Expense.*

Respondents claim two items of stock issuance expense as part of the organization expense of Penn Water. The first item of $81,906.59 was incurred during the period from 1923 to 1935 in obtaining additional financing through the sale of Penn Water capital stock. This item, erroneously classified by Respondents in Account 301, Organization Expense, is chargeable to Account 151, Capital Stock Expense. Issuance of additional stock in a period from thirteen to twenty-five years after the actual organization of a corporation neither entails organization expense within the meaning of Account 301 of the Commission's Uniform System of Accounts, nor represents an "extension" of the [53] organization of Penn Water (in 1910) as Respondents' witness Gunn theorized.

37. Respondents' Gunn testified that "The records of Harvey Fisk and Sons were never found, and the only knowledge I have of the management services rendered by Harvey Fisk and Sons are those described by Mr. Fisk * * *."

38. Hutchinson arranged for the employment of the Board of Advisory Engineers. The contracts with Hugh L. Cooper and Sanderson & Porter were negotiated by Messrs. Dimock and Coffin.

The second item, in the amount of $331,703.15, is claimed as representing McCall Company bond issuance expense incurred in 1905 which it is contended should be imputed to Penn Water common stock issued in 1910. The theory of this claim is as follows. Upon the incorporation of the McCall Company in 1905 a total of $8,075,000 principal amount of its bonds was sold by bankers. Respondents claim that the bankers received McCall Company common and preferred stock, having a cash value of $644,179.69, as compensation for the sale of the $8,075,000 of bonds. The McCall Company encountered financial difficulty in 1907 and went into receivership. Thereafter, the Bondholders' Committee accepted the plan of J. E. Aldred and his associates (who were in no way connected with the project prior to 1908) for financing completion of the development. The plan was embodied in a memorandum of understanding dated April 24, 1909, and, in accordance therewith, Penn Water was organized in 1910 to acquire from the Committee the assets formerly owned by the McCall Company, which assets had in the meantime been purchased by the Committee at a foreclosure sale. The $8,325,000 of McCall Company bonds then outstanding was paid off, 40% in new bonds ($3,330,000) and 60% in new stock ($4,995,000) of Penn Water.[39] In this process the [54] outstanding common ($4,166,500) and preferred ($5,000,000) stock of the McCall Company (the claimed cash value of a part of which is here in issue) was wiped out completely. Since, under the Aldred plan, the McCall Company bondholders received in return for their bonds 60% of their face value in Penn Water stock, Respondents contend that six-tenths of $552,838.58 ($644,179.69[40] less

39. The Aldred Syndicate, acting for the Committee, raised the new money required to complete the project by the sale of additional Penn Water bonds. Control of Penn Water by the Aldred syndicate was assured under a voting trust agreement in effect until November 1, 1912.

40. The $644,179.69 is the claimed cash value of the McCall Company common and preferred stock assumed to have been issued to Lee, Higginson & Company, (5,000 shares common), Bertron, Storr[s] & Griscom (7,462½ shares common) and Harvey Fisk & Sons (1,875 shares preferred and 17,537½ shares common, three-eighths of the asserted value of which is claimed for management services) as compensation for financing services.

$91,341.11 [41]), or $331,703.15, represents McCall Company bond issue expense now associated with Penn Water stock issue expense.

The amount of $331,703.15 is not includible in the rate base for several reasons, each independently sufficient to require its disallowance. First, the McCall Company stock had no cash value, as already shown. Therefore, no cost was incurred by its issuance which could have been carried forward under the Aldred plan. Second, the claimed distribution to the bankers has not been sustained by credible evidence as we [55] have already concluded. Third, assuming, arguendo, a cash value and distribution as alleged, no part thereof could be allowed, in the absence of a showing of cost to the bankers of any services rendered, as distinguished from profit, because of the no-profits-to-affiliates rule, the bankers being affiliated as we have seen. Fourth, any such cost would be a financing cost, not a cost of physical property, and the 6% interest allowance hereinafter made is in lieu of all other financing costs, as already stated. Fifth, the amount claimed is not properly includible in Account 301, Organization Expense.

Claimed Value of Aldred Management Services.

Respondents assert that J. E. Aldred, who participated in the organization of Pennsylvania Water & Power Company, performed management services with respect to the McCall-Penn Water development in the period from November 1, 1908 to November 1, 1912, and that for such services he was given 5,000 shares of Penn Water common stock. Respondents place a cash value of $60 a share upon this stock (resulting total, $300,000) but contend only that $218,750 with respect thereto should be included in the rate

41. The $91,341.11 is made up of $86,785.32, considered to be bond expense which should have been amortized between June 15, 1905, the date of the McCall bonds, and July 1, 1909, the date when a sufficient number of bonds had been deposited to effect the reorganization, and $4,555.79, considered to represent bond expense deemed applicable to the 66 McCall Company bonds which had not been exchanged for Penn Water securities and had been purchased by J. E. Aldred.

base, determining the latter sum as that proportion of the total value which is applicable to that part of the alleged services assertedly rendered during the claimed period of construction (ending October 1, 1911).

[56] The basis of Respondents' contention is that the voting trust arrangement provided for in the memorandum of understanding on April 24, 1909, between Aldred and the McCall Company bondholders' committee, vested Aldred with powers of management with respect to McCall Company. But it is to be observed that this agreement did not expressly vest Aldred with such powers and there is no credible evidence on the basis of which it can be determined that the parties so construed the agreement.[42]

The evidence does not reveal that prior to the date of the foregoing memorandum of understanding (April 24, 1909) Aldred was otherwise engaged, with respect to the McCall project, than in negotiating a plan of refinancing with the bondholders' committee and attempting to reach an agreement looking to a material reduction of McCall's Company's capitalization and fixed charges as a condition of his taking any part in the refinancing.[43] It was not until April 6, 1909 that he submitted a plan for the refinancing which formed the basis for the later memorandum [57] agreement entered into with the bondholders' committee. It does appear that Aldred had had various surveys made of the McCall project, but these apparently had been made solely for the purpose of informing himself in connection with his negotiations concerning the refinancing. Thus there is no proof that any management services were rendered prior to the date of the memorandum of understanding with the bondholders' committee of April 24, 1909.

At that date Respondents assert the committee stipulated that Aldred would become the active manager of the

42. One of Staff's witnesses testified that he examined the minutes of the bondholders' committee but found no indication that the Committee had arranged for any management services to be rendered by Aldred.

43. Nor, indeed, was he the only party negotiating with the committee at that time in that respect.

company during construction and until the expiration of the proposed voting trust; but it is apparent that, as of the later dates of May 20, 1909 and August 5, 1909, Aldred understood that this phase of the "managership" was to be conducted in his capacity as receiver.

Aldred was appointed receiver of McCall Company, by order of the Circuit Court of the United States for the Eastern District of Pennsylvania on July 17, 1909, with express authority to "have, hold, use, preserve, manage, exercise and enjoy" the property, rights, privileges, franchises and immunities of McCall Company, subject to the supervision of the Court. He entered into possession as receiver for a period of approximately six months, filed a final report as of February 18, 1910, in which he reported [* 3] * cash and receipts of $173,166.27 and disbursements of 33,722.91, including "receivership fee and expense" of $7,000, and was discharged on March 18, 1910.

During the receivership, Aldred had been advanced $600,000 by the bondholders' committee for use in construction. On March 3, 1910, Aldred accounted to the board of directors of Penn Water with respect to the expenditures made out of sums received by him, including principally the $600,000. His accounting stated that, while he had been receiver, "matters and situations were met" by him which could not be dealt with appropriately as receiver, and he listed as items falling in this category track relocation settlements and right-of-way purchases, the acquisition of 66 non-deposited bonds and the retainer of an attorney. However, in connection with the foregoing right-of-way acquisitions Aldred had had to give certain deeds, which he did specifically in his capacity as receiver and in his offer of settlement of his account he stated that all things done in connection therewith had been done without intention of profit or advantage to him.[44]

By this same accounting, Aldred advised the board of directors that, between August 19, 1909 and December 1,

* 2½ lines of duplication omitted in printing.

44. These actions were duly approved and adopted by the board of directors of the company.

1909, he had entered into [59] eight contracts for the purchase of cement, sand and stone, for the purchase of plant equipment, and for engineering services, all in connection with construction.[45] As to at least the five most important contracts, he made it clear, at the various times of execution thereof, either that payment would be by the receiver of the new company, or that he was acting in his capacity as receiver, or else he made contemporaneous arrangement for the assumption of ultimate liability by others. As to none of the eight contracts is it shown that at the time of the execution he had made up his mind to act otherwise than in his capacity as receiver, and nowhere does it appear that he was put to any personal expense in connection with any liability he may have technically assumed under these contracts.

With respect to same eight contracts, Aldred made no assertion in his accounting to the board of directors that the transactions represented "matters and situations" which could not be dealt with appropriately by him as receiver. His later statement in the 1939 affidavit taken by Respondents' witness Gunn to the effect that "to expedite the work . . . it became incumbent on me to enter into a number of contracts, personally" is contrary to what he did.

Therefore, in connection with whatever services Aldred rendered McCall Company during the period of his receivership it [60] must be found, insofar as this record is concerned, that he received adequate compensation in the fee he claimed and was granted by the Court as receiver.

Further, on January 13, 1910, Aldred was elected President of Penn Water at a salary of $10,000 a year, and at the same time he became a director.[46]

Thus there is no period of time during the interval in which he is alleged to have rendered managerial services

45. These contracts were also adopted and assumed by the company, March 3, 1910.

46. One of Staff's witnesses examined the minutes of the board of directors of Penn Water, but discovered no indication that in addition to his duties as president, Aldred was expected to contribute any special management services for which he would be paid additional compensation.

that he was not either under employment as receiver of McCall Company or an officer of Penn Water; and there is no evidence that the term "management", as the parties to the refinancing plan used it, ever meant or was intended to mean anything more than the "control" that he exercised as receiver, or as an officer of Penn Water, or under the voting trust.

It is also clear from the evidence that all of the stock obtained by Aldred for himself, by the bankers, and by the subscribers, was bonus stock. It was expressly bonus stock as to the new money bond purchases, who received 50% of the par value of the new bonds subscribed for in stock, as a "bonus" for which no other payment was made. Aldred himself referred to all of 35,000 shares [61] going to new underwriting as a "bonus". Of these latter shares the bonus to new money bond subscribers involved 20,850 shares, while the participating London bankers received 4,575 shares as "profit", and others, including Aldred, received similar bonuses totalling 4,575 shares. Against this inflation, the additional 5,000 shares which Aldred received, now claimed to be for management services, could have then only represented expectation of an indefinite realization out of the future operating income of the company, especially as Penn Water's stock had no cash value as of issuance and none was then indicated for the immediate future, which last circumstance was, in effect, contemporaneously stated by Aldred. If that stock could be said to represent compensation for anything, assuming arguendo, it had had any cash value, it must have been for financing services, not a part of project cost. Due allowance for such amounts is made in the allowance of 6% interest.

Quotations of sales of such stock made approximately one and one-half years later, after Penn Water had commenced the sale of power in the Baltimore market, are not evidence that Penn Water's stock had a cash value at the time of its issuances. Nor does the conversion of 66 McCall Company bonds (*supra*) afford evidence of value as to

such stock, where, as stated by Aldred, the transaction was effected to avoid litigation.

The $218,750 is, accordingly, disallowed.

[62] *Interest during Construction.*

Respondents contend that interest during construction should be computed on certain balances accumulated by them during a period from April 14, 1905 to October 1, 1911,[47] and that the interest rate should be 6%.[48] Respondents include, however, in the basis for this interest calculation certain items herein excluded from the rate base.[49] The amount thus computed by Respondents and the Staff's corresponding recommendations are:

	Respondents	Staff
Interest on construction balances	$2,505,868.34	$1,047,348.16
Interest on construction working funds	—[50]	78,371.33
Interest eliminated in other adjustments	—	1,642.17
	$2,505,868.34	$1,127,361.66

After a net credit, proposed by Respondents, in the amount of $177,138.11, which gives effect to certain income received and items expensed, Respondents' computation of interest during [63] construction reduces to an amount still $1,201,368.57 higher than that recommended by the Staff.

The staff contends that the construction period should be terminated December 31, 1910, and thus puts in issue both the interest calculations of Respondents and also the proposed credit for income and items previously expensed,

47. October 1, 1911 is the beginning of the period of commercial operation, as claimed by Respondents.

48. That is ½% of monthly balances, less ¼% for additions. The Staff used the same interest rate and followed the same procedure.

49. Such items represent certain of those which originated prior to October 1, 1911, the date fixed by Respondents as the end of the construction period and the beginning of commercial operations.

50. Not claimed by Respondents.

or a total difference of $1,378,506.68 as indicated in the tabulation above.

With respect to the interest period, the Staff contends that interest should be allowed only for the periods April 14, 1905 to October 31, 1907, September 1, 1909 to December 31, 1909, and all of the year 1910, with an additional allowance for interest on investment in hydro units placed in service during 1911. In other words, the Staff recommends that no allowance be made for interest during the so-called cessation period extending from November 1, 1907 to August 31, 1909, and that generally capitalization of interest and taxes be terminated as of December 31, 1910. On the other hand, Respondents contend that work was done from November 1907 to November 1908, which directly contributed to the completion of the McCall development, though admitting that between November 1, 1908 and August 1909 there "was no overt construction activity—solely the result of economic conditions over which the management of McCall Company had no control".

The original underwriting was for an initial plant at McCalls Ferry site to deliver 50,000 hp to the City of Philadelphia (Pa.), and to cost, with steam auxiliary and an allowance for working [64] capital, $7,200,000, and on this basis, $8,000,000 of bonds were underwritten at 90.

On August 7, 1905, the engineers revised the original estimates of cost for a hydro plant with a dam crest at 155 feet (without steam auxiliary) from $5,491,000 to $6,750,000.[51]

On June 20, 1906, the Executive Committee of the Company decided upon a dam height of 165 feet. This entailed an increase of substantially $2,000,000 in the hydraulic work alone. Estimates made at that time disclosed that a 165-foot dam at McCall Ferry, with 7 initial units providing an output of 50,000 hp would cost $8,859,000. On October 3, 1906, $335,000 more was added to cover tailrace improvements, making an estimated total to complete

51. No explanation was given for this increase.

of $9,194,000. On November 30, 1906, the Vice President of the Company stated that the latter would have to raise another $1,646,000 to complete the installation. Approximately five months later officials of McCall Company estimated the final cost at $9,815,000, and the Chief Engineer again noted that the Company would be short of funds for the project.

Beginning in early July, 1907, the original underwriters began to take steps to provide funds. At that time, Bertron, Storrs & Griscom wrote Lee, Higginson & Company that McCall Company would [65] need approximately $500,000 by fall, but that they had about six months in which to make arrangements for an additional $1,000,000.

On October 21, 1907 the Knickerbocker Trust Company failed [52] and within three days McCall Company's manager of construction, by telephone, ordered the manufacturer to suspend work on the production of turbines, and the manufacturers of electrical machinery was directed to stop work on the generators and auxiliary equipment. On November 1, work on the dam ceased, and the work on the tail-race, walls and other parts of the power house stopped. Only such men were retained as were deemed needed to guard the completed work against danger during the winter, put the construction equipment in winter quarters, and for minor work in the power house.[53] The work as a whole was estimated by the Chief Engineer as 80% completed.

In April 1908, provision was made for resuming work on the tail-race, cleaning up around the power house and raising the wing dam. The total amount required was esti-

---

52. The nature of the panic of 1907, its effect upon the financial markets, the ability of borrowers to find money, and of lenders to provide it is well known, and of these matters notice is taken.

53. After the first and through the twenty-second of November, never more than 124 men were employed on any one day at the site, and these were employed on concrete and form work, some repairs and miscellaneous minor matters. The work included placing 600 yards of concrete in the power house substructure for protection against water and 130 yards in arches as protection against ice, with some work done by carpenters to render headgates safe and the power house concrete safe against high water and floods. By February 1, none of the hydraulic engineer's construction organization was considered necessary.

mated at approximately $194,000. In October 1908, Susquehanna Company arranged to borrow some [66] additional money for McCall Company, but by November funds available to McCall Company were exhausted. No further work was done until after Aldred became receiver in July 1909.[54]

Prior to his appointment as receiver, Aldred had negotiated an underwriting commitment with London connections, and, shortly after his appointment, by another such agreement with other parties (of Montreal, Canada) he succeeded in perfecting his financial plans to raise approximately $3,800,000 cash [55] for reorganization of McCall Company and completion of construction of the project. Thereafter, securing advances from the bondholders' reorganization committee, and beginning with the date of August 15, 1909, and continuing to December 1, 1909, Aldred entered into contracts with Empire Engineering Corporation for supervision of construction, with material-men for various items of construction materials, and with manufacturers for the completion of machinery and equipment originally ordered by McCall Company. Construction work was resumed approximately on September 1, 1909.

[67] There is no evidence that the 1907-1909 cessation can be attributed to the fact that the lender (Knickerbocker Trust Company) under the contract of November 1, 1905 with Susquehanna Contracting Company, went into a receivership in October 1907, for at the time of the initiation of the receivership of the Trust Company that lender was not obligated on any call for funds for project construction purposes. The general economic situation undoubtedly delayed the procuring of additional funds, but the shortages of finances had not taken the officers of McCall Company by surprise. They were early apprised of the necessity of finding additional money to complete the project. The record discloses that contemporaneously with these events

54. McCall Company defaulted in the payment of bond interest December 15, 1908. A bondholders' committee has been formed prior thereto. And on complaint filed by Knickerbocker Trust Company, as trustees under a mortgage securing the bonds, Aldred was appointed Receiver, July 17, 1909.

55. $4,170,000 in principal amount of bonds at 90.

Hutchinson as chief engineer of McCall Company stated, in effect, that the omission to take steps to provide more money led to the Company's discontinuance of construction. He not only made no reference to market conditions as the primary cause but later, in statements made at the Respondents' request, further stated that it was due to delays that funds became exhausted.[56] Nor can it be said, on the evidence in this proceeding, that the work performed during the cessation period definitely contributed to shortening the construction period.

Therefore, interest during construction will not be allowed for the period November 1, 1907 to August 31, 1909, inclusive.

[68] *End of Construction Period.*

The initial plant (1905-1906) was conceived as a 7-unit project capable of producing 50,000 hp, with provision for the further addition of 3 units capable of producing 25,000 hp more.

The project, as reconsidered in connection with the reorganization of McCall Company, was designed for 5 units to develop approximately 50,000 hp. The available market was not determined at the time the initial plant was first projected, the promoters merely looking to the sale of 50,000 hp in either Baltimore, Philadelphia, or any point within the territory. Contracts for the sale of power, however, were executed prior to the receivership of McCall Company with Baltimore Company (June 4, 1907) for 4,000 kw firm, and with The United Railways and Electric Company of Baltimore (United Company) (June 28, 1907) for 10,000 kw firm. With the reorganization, the development was proceeding without the necessity of immediate negotiation or renewal of contracts for the sale of power, but such contracts were later executed with Baltimore Company (August 29, 1910) for 14,666 kw of firm, and with United Company (February 8, 1911) for 12,000 kw of firm.

56. This statement is found in an affidavit in evidence on Respondents' own motion.

Unit No. 1 went on the line for contract delivery to Baltimore Company on October 23, 1910. Though first subject to a minor bearing defect, this unit was always considered operational and by the end of June had had the advantage of a protracted period of bearing inspection, and bearing overhaul, and work on head and tail gates was almost entirely completed, so that from then on to the end of the year, excepting two outages for unknown causes, one [69] of which occurred during a low flow period, Unit No. 1 experienced just one outage, of a relatively brief character, for governor valve repair.

Unit No. 2 went on the line on February 23, 1911, and Unit No. 3 on March 25, 1911. Unit No. 2 had experienced bearing trouble, and Unit No. 3 had experienced bearing delays and governor trouble prior to going on the line, but these defects were corrected, temporarily or otherwise, by various devices, Unit No. 2 operating on a water thrust bearing, subject to hand control, and Unit No. 3 on a permanent bearing with an adjusted governor, each without further mishap arising from known causes, until a time that lies beyond the date (October 1, 1911) fixed by Respondents as the date of the commencement of commercial operations.

Units Nos. 4 and 5 were assembled (with generators ready to run) on April 29, 1911 and June 30, 1911, respectively, and were put on the line on May 19, 1911 and July 25, 1911, respectively, neither unit experiencing any significant outage prior to the date fixed by Respondent, aforesaid.

The six transformers which became operational between October 21, 1910 and August 17, 1911, were subject to certain outages, Nos. 1, 2 and 3 for brief periods and from unknown causes during the first 6 months of 1911 and not at all thereafter to October 1, 1911. Nos. 4, 5 and 6 suffered considerably from lightning and the damage resulting, but at no time, from June 1, 1911 to October 1, 1911 did Respondents have less than a rated normal trans-

former capacity available of 22,500 kw, which was approximately [70] sufficient to carry the combined Baltimore loads except principally for a part of the Saturday night and Sunday peaks.

On February 24, 1911, Baltimore Company had been advised that it could take on load up to 14,000 kw, and in early March, Respondents were supplying the contract requirements of Baltimore Company from 2 units and expected to be in position within 6 weeks to start the delivery of power to United Company under its contract. Thereafter, for causes not satisfactorily established in the evidence, Baltimore Company's load dropped, but for no month during this period of reduction in Baltimore Company's draft (April, May and June) did that company take less than 89.5% of its so-called monthly prorate of its annual entitlement of 70,000,000 kwh. Further, the allowance of rebates to Baltimore Company by Penn Water for the effect on deliveries of Respondents' initial equipment and service deficiencies ceased with the power bill of the month of March and did not resume thereafter. Approximately mid-May (1911) Penn Water's then chief engineer reported that the delivery of power to Baltimore Company had been going along very well, the maximum peak at the power house having been 18,000 kw and the average deliveries amounting to about 5,000,000 kw per month.

As of April 17, 1911, Respondents were endeavoring to be fully prepared to make delivery of power to United Company by June 1, and on May 18, 1911, the work of preparation was authoritatively stated to be going along in fine shape, the then chief engineer of Penn Water reporting, "We will be ready to deliver power to the Railways Company by June 15". However, [71] that customer was making slower progress with its part of the preparatory work and refusing to agree to the installation of apparatus available that would have expedited the date of readiness. Delivery of power to United Company was first made by mid-July and on July 17, 1911 on a full contract basis, and it is

significant that Respondents' witness Walls recalls that this customer experienced none of the service interruptions that had previously been experienced by Baltimore Company.

An analysis of interruptions experienced in the period of January 1, 1911 to August 24, 1911, made at the time, discloses that of 30 total interruptions, 19 were caused by lightning, 4 by troubles on customers' systems, 4 were due to station troubles or operator's mistake, and the remaining 3 for causes not here significant. All other interruptions (less than total) were caused by customers' systems or were insignificant in effect. Though lightning caused such a high proportion of the interruptions, only 4 out of 5 storms affected Respondents' system, and it was the opinion of Penn Water's then operating superintendent that the proportion of interruptions, considering all storms, was small. Causes other than lightning accounted for interruptions totaling 1 hour and 49 minutes in the first six months of 1911, and 1 hour and 12 minutes during the next four months (to October 1, 1911), while lightning interruptions accounted for a total of 24 hours and 20 minutes during the same total period of time. But this difficulty of lightning was not peculiar to Respondents' system for it was generally "the assailable link in modern hydro-electric power supply" at that time and Respondents were still [72] making extensive improvements to eliminate lightning disturbances in 1913.

The Commission has stated in previous opinions that the determination of the date upon which the capitalization of interest and taxes during construction should cease is not controlled by artificial rules, is not a matter of formula, but is a matter of reasonable judgment based on a consideration of all the pertinent facts. It is true that reasonable time should be allowed for test periods and trials, the correction of defects and adjustments, and time for the plant to become sufficiently completed to be reasonably reliable for service for the purpose for which it was intended. Nevertheless, neither full capacity generation, nor the completion of all construction activities, nor the making of per-

manent installations, as against those of a temporary nature, are a *sine qua non* with respect to this determination. Suspensions of particular machines for certain supplemental construction processes do not necessarily influence the determination, nor outages as merely outages; nor, under the Act, would it be proper to permit the determination to be influenced solely by the fact that revenues received had not equalled interest charges, nor earnings a fair return on the property.

After careful consideration of all the evidence in this proceeding on this subject, it is found that the date of the end of the construction period was June 30, 1911; interest is capitalizable through that date, except for the "cessation period" previously discussed, and net revenues should be credited to cost of plant up to that time.

[73] *Expenditures during the Cessation Period (1907-1908).*

The amount here at issue is a total of $143,981.46 embracing (1) administrative and other expenses from November 1, 1907, the date of suspension of work at the McCall Ferry project, to September 1, 1909, the approximate date on which construction resumed; (2) wages, salaries and incidental expenses charged to "Cessation Expense Account"; and (3) salary of the chief engineer of McCall Ferry and engineering fees. These items consist of the following three categories:

1. Administrative and Other:	
a. Local office accounting, salaries and expenses	$ 4,977.37
b. General office salaries[57]	10,255.94
c. Engineering experts[58]	11,225.00
d. Insurance (fire, compensation, fidelity, etc.)	7,500.00

57. Vice President, treasurer, chief accountant, accountant, secretary, assistant to treasurer, stenographers and clerical, miscellaneous.

58. Resident engineer, assistant resident engineer, assistant engineer, assistant to chief engineer, electrical inspector.

e. General office supplies and expenses	13,851.39
f. Engineering expense	2,053.27
g. Traveling expense	126.39
h. Miscellaneous expenses	2,910.16
	$52,899.52
2. "Cessation Expense Account", Salaries, Materials and Supplies and Other:	
a. Salaries and wages	28,277.12
b. Salaries and wages in arrears	4,624.07
c. Materials; supplies, and tools	2,175.34
d. Freight	750.89
e. Miscellaneous	617.79
	$36,445.21
3. Salary of the Chief Engineer and Engineering Fees:	
a. Hutchinson's salary after Nov. 1, 1907	15,499.94
b. Hugh L. Cooper fee (completion bonus)	29,926.27
c. Sanderson & Porter fee	9,210.52
	$54,636.73

[74] Respondents contend that the expenses in the first category were necessarily incurred in connection with the direct costs of field work and design during the period of cessation, and that since the Staff has taken no exception to the inclusion in the rate base of direct costs incurred in this period, these overheads should be included therein.

Respondents contend that the expenses in the second category were unavoidable costs necessary to carry the project to completion and should be included in the rate base.

Respondents contend that the items in the third category represented salaries and fees paid with respect to

work that contributed to the completion of the project or for contract services to McCall Company which the parties were ready to perform and should be included in the rate base.

With respect to the first two categories, considerable judgment is involved in segregating expenses which contributed directly to construction work and those which did not. In general, the Staff's recommendations have been based upon the principles that (a) general overheads applicable to the period of cessation are not proper construction costs, and (b) overheads which related to construction work, without duplication, are proper.

Respondents' witness Gunn admitted that, but for the cessation, overheads would have been charged over a shorter period and that the contribution of the office work done during this period to the shortening of construction after its resumption cannot be determined. The contention that the salary of the vice president and [75] general manager and the secretary and treasurer of McCall Company should be included as their services related to plant designing during the period is based upon unsupported inferences.

As to the salary of Hutchinson, though as Chief Engineer of McCall Company he issued instructions in April 1908 with respect to the completion of the tailrace excavation and the raising of the wing dam and made further estimates at that time with respect to the cost of completion of the project, he was not, during the cessation period, in direct supervision of construction.

With respect to engineering fees, (1) Cooper, though paid on the basis of his contract, did not complete the work he was under contract to do, Empire Engineering Corporation later completing the work for an additional fee, and (2) Sanderson & Porter, though paid on the basis of their contract with McCall Company which called for their services with respect to the complete installation of electrical equipment, transmission lines and substations, never

did more than prepare certain designs, Penn Water later undertaking to design and make the same installations at its own expense with its own engineering force.

The opinion of Respondents' witness Gunn that general engineering conducted during the cessation period contributed to decrease the time necessary to complete the project after assumption of construction (approximately on September 1, 1909) is patently based upon the witness' speculations.

There is no showing that the general designing, planning and administration of cessation period served actually to shorten [76] the following period of construction; and, therefore, it is found that the foregoing amounts representing expenditures during the cessation period in the sum of $143,981.46 should not be included in the rate base.

Promotion Expense (1911-1914).

Respondents contend that an amount of $29,601.59, consisting of promotion expense, should be included in the rate base. Respondents' contention is that under Account 71 of the Classification of Investment in Road and Equipment of Steam Roads, prescribed by the Interstate Commerce Commission (1914), the capitalization of this item is required, but it is to be noted that Account 71 refers to organization expenses only and such expenses are usually incurred at the inception of a company and not over a period of years subsequent thereto.

These charges, recommended for exclusion from the rate base by Staff, include a portion of the salaries of the president of Penn Water, the vice president and treasurer, the expense of office rent, traveling, booklets, photos, maps, entertainment, special trains, stock certificates, legal expenses, security listing fees, and miscellaneous.

Respondents concede that it is impossible to tell precisely to what these expenses relate. Respondents' witness Gunn could not state the nature of the activities of the officers whose salaries were partly charged under these items,

nor the purpose of charging office rent or traveling expenses. The character of the booklets [77] issued was not known, nor of the photographs, the maps,[59] the entertainment or special trains. An unsegregable amount was thought by Respondents' witness Gunn to be stock issuance expense.[60] Legal expenses represented services performed with respect to (1) subsidiaries that were never active, (2) the listing of securities, and (3) the securing of commission approval of contracts. The nature of the foregoing items indicate that the $29,601.59 is composed in part of operating expenses and in part of stock issuance expense, substantially all of which were incurred subsequent to the date determined herein (July 1, 1911) as the date of commencement of commercial operations.

It is therefore found the expense here involved should not be included in the rate base.

Credit for Property Transferred (1908)

In 1908, McCall Company disposed of certain land below McCall Ferry and Penn Water, as successor, proposes to credit plant account with an amount of $162,936.02, which is less than the amount later realized in connection with this transaction. The staff recommends that the amount of the credit be the same as the amount [78] ultimately realized ($200,000). The difference, $37,063.98, is in dispute.

By agreement dated February 20, 1908, McCall Company agreed to convey its interests along the Susquehanna River below the foot of Cully's Falls at the McCall Ferry dam site (in both Pennsylvania and Maryland) to the Susquehanna Power Company (Md.) and to a subsidiary of Susquehanna Power Company (to be organized in Pennsylvania) for $760,000 of bonds of Susquehanna Power

59. The evidence is that the map was prepared for Moody's Manual (1914)—clearly not a purpose justifying capitalization in plant accounts.

60. A small amount of treasury stock was issued during this period, and the voting trust in respect to Penn Water stock provided by an agreement dated February 7, 1910 terminating in 1912, for the converting of voting trust certificates into stock certificates.

Company and certain shares of stock thereof.[61] The McCall Company properties were conveyed and subsequently under a later agreement dated March 5, 1912, Penn Water agreed to sell to certain purchasers its then remaining $703,000 of bonds of Susquehanna Power Company and its then remaining shares of stock for $200,000 in cash.[62] This latter transaction was consummated in accordance with the agreement.

Penn Water determined the amount of the proposed credit to plant account ($162,936.02) on the basis of a claimed value as of August 11, 1908, the date of sale, which it now places on the interests conveyed in 1908. No direct evidence of value was found by Penn Water, so its witness Gunn derived a value by discounting the $200,000 at 6% from 1912, date of realization, to August 11, 1908. . . .

[79] Under the Commission's Uniform System of Accounts, the land below Cully's Falls should never have been included in plant account (Electric Plant Account Instruction 9-J). Moreover, the lands involved in the above transaction were substantially all acquired as a part of the total of lands and rights purchased from Harlow-McGaw in 1905 for an over-all consideration of $200,000 in cash and $250,000 in bonds at 90%; Penn Water inherently assumes that after this transaction more than a majority of the rights and interests acquired under the Harlow-McGaw contract was retained, an assumption which is not substantiated by the evidence.

It is apparent that the $200,000 is the best evidence of the proper credit to Penn Water's plant account, and it is so found.

Profit on Property Sold (1930).

In June 1930, Penn Water transferred to its affiliate, Safe Harbor, under a sales agreement, and at a total price

61. "Certain shares" refers to the entire stock part of the transaction, i. e., the shares originally received (Susquehanna Power Company, common) and those into which such shares were later converted (Susquehanna Properties Company, a holding company for all shares of Susquehanna Power Company).

62. Certain of the original amount of bonds and certain of the shares of stock had been disposed of in settlement of legal services.
